# FOREWORD BY THE MINISTER

Our national curriculum is the culmination of our efforts over a period of seventeen years to transform the curriculum bequeathed to us by apartheid. From the start of democracy we have built our curriculum on the values that inspired our Constitution (Act 108 of 1996). The Preamble to the Constitution states that the aims of the Constitution are to:

- heal the divisions of the past and establish a society based on democratic values, social justice and fundamental human rights;
- improve the quality of life of all citizens and free the potential of each person;
- lay the foundations for a democratic and open society in which government is based on the will of the people and every citizen is equally protected by law; and
- build a united and democratic South Africa able to take its rightful place as a sovereign state in the family of nations.

Education and the curriculum have an important role to play in realising these aims.

In 1997 we introduced outcomes-based education to overcome the curricular divisions of the past, but the experience of implementation prompted a review in 2000. This led to the first curriculum revision: the *Revised National Curriculum Statement Grades R-9* and the *National Curriculum Statement Grades 10-12* (2002).

Ongoing implementation challenges resulted in another review in 2009 and we revised the *Revised National Curriculum Statement* (2002) and the *National Curriculum Statement Grades 10-12* to produce this document.

From 2012 the two National Curriculum Statements, for *Grades R-9* and *Grades 10-12* respectively, are combined in a single document and will simply be known as the *National Curriculum Statement Grades R-12*. The *National Curriculum Statement for Grades R-12* builds on the previous curriculum but also updates it and aims to provide clearer specification of what is to be taught and learnt on a term-by-term basis.

The *National Curriculum Statement Grades R-12* represents a policy statement for learning and teaching in South African schools and comprises of the following:

- (a) Curriculum and Assessment Policy Statements (CAPS) for all approved subjects listed in this document;
- (b) *National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R-12*; and
- (c) *National Protocol for Assessment Grades R-12*.

A handwritten signature in black ink, appearing to read "Motshekga".

**MRS ANGIE MOTSHEKGA, MP  
MINISTER OF BASIC EDUCATION**

# SECTION 1

## INTRODUCTION TO THE CURRICULUM AND ASSESSMENT POLICY STATEMENTS FOR LIFE SCIENCES GRADES 10-12

### 1.1 Background

The *National Curriculum Statement Grades R-12 (NCS)* stipulates policy on curriculum and assessment in the schooling sector.

To improve implementation, the National Curriculum Statement was amended, with the amendments coming into effect in January 2012. A single comprehensive Curriculum and Assessment Policy document was developed for each subject to replace Subject Statements, Learning Programme Guidelines and Subject Assessment Guidelines in Grades R-12.

### 1.2 Overview

- (a) The *National Curriculum Statement Grades R-12 (January 2012)* represents a policy statement for learning and teaching in South African schools and comprises the following:
  - (i) *Curriculum and Assessment Policy Statements for each approved school subject;*
  - (ii) *The policy document, National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R-12; and*
  - (iii) *The policy document, National Protocol for Assessment Grades R-12 (January 2012).*
- (b) The *National Curriculum Statement Grades R-12 (January 2012)* replaces the two current national curricula statements, namely the
  - (i) *Revised National Curriculum Statement Grades R-9, Government Gazette No. 23406 of 31 May 2002, and*
  - (ii) *National Curriculum Statement Grades 10-12 Government Gazettes, No. 25545 of 6 October 2003 and No. 27594 of 17 May 2005.*
- (c) The national curriculum statements contemplated in subparagraphs b(i) and (ii) comprise the following policy documents which will be incrementally repealed by the *National Curriculum Statement Grades R-12 (January 2012)* during the period 2012-2014:
  - (i) *The Learning Area/Subject Statements, Learning Programme Guidelines and Subject Assessment Guidelines for Grades R-9 and Grades 10-12;*
  - (ii) *The policy document, National Policy on assessment and qualifications for schools in the General Education and Training Band, promulgated in Government Notice No. 124 in Government Gazette No. 29626 of 12 February 2007;*
  - (iii) *The policy document, the National Senior Certificate: A qualification at Level 4 on the National Qualifications Framework (NQF), promulgated in Government Gazette No. 27819 of 20 July 2005;*

- (iv) The policy document, *An addendum to the policy document, the National Senior Certificate: A qualification at Level 4 on the National Qualifications Framework (NQF), regarding learners with special needs, published in Government Gazette, No.29466 of 11 December 2006, is incorporated in the policy document, National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R-12; and*
- (v) The policy document, *An addendum to the policy document, the National Senior Certificate: A qualification at Level 4 on the National Qualifications Framework (NQF), regarding the National Protocol for Assessment (Grades R-12), promulgated in Government Notice No.1267 in Government Gazette No. 29467 of 11 December 2006.*
- (d) The policy document, *National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R-12*, and the sections on the Curriculum and Assessment Policy as contemplated in Chapters 2, 3 and 4 of this document constitute the norms and standards of the *National Curriculum Statement Grades R-12*. It will therefore, in terms of *section 6A* of the *South African Schools Act, 1996 (Act No. 84 of 1996)*, form the basis for the Minister of Basic Education to determine minimum outcomes and standards, as well as the processes and procedures for the assessment of learner achievement to be applicable to public and independent schools.

### 1.3 General aims of the South African Curriculum

- (a) The *National Curriculum Statement Grades R-12* gives expression to the knowledge, skills and values worth learning in South African schools. This curriculum aims to ensure that children acquire and apply knowledge and skills in ways that are meaningful to their own lives. In this regard, the curriculum promotes knowledge in local contexts, while being sensitive to global imperatives.
- (b) The National Curriculum Statement Grades R-12 serves the purposes of:
- equipping learners, irrespective of their socio-economic background, race, gender, physical ability or intellectual ability, with the knowledge, skills and values necessary for self-fulfilment, and meaningful participation in society as citizens of a free country;
  - providing access to higher education;
  - facilitating the transition of learners from education institutions to the workplace; and
  - providing employers with a sufficient profile of a learner's competences.
- (c) The National Curriculum Statement Grades R-12 is based on the following principles:
- Social transformation: ensuring that the educational imbalances of the past are redressed, and that equal educational opportunities are provided for all sections of the population;
  - Active and critical learning: encouraging an active and critical approach to learning, rather than rote and uncritical learning of given truths;
  - High knowledge and high skills: the minimum standards of knowledge and skills to be achieved at each grade are specified and set high, achievable standards in all subjects;
  - Progression: content and context of each grade shows progression from simple to complex;

- Human rights, inclusivity, environmental and social justice: infusing the principles and practices of social and environmental justice and human rights as defined in the Constitution of the Republic of South Africa. The National Curriculum Statement Grades R-12 is sensitive to issues of diversity such as poverty, inequality, race, gender, language, age, disability and other factors;
- Valuing indigenous knowledge systems: acknowledging the rich history and heritage of this country as important contributors to nurturing the values contained in the Constitution; and
- Credibility, quality and efficiency: providing an education that is comparable in quality, breadth and depth to those of other countries.

(d) The National Curriculum Statement Grades R-12 aims to produce learners that are able to:

- identify and solve problems and make decisions using critical and creative thinking;
- work effectively as individuals and with others as members of a team;
- organise and manage themselves and their activities responsibly and effectively;
- collect, analyse, organise and critically evaluate information;
- communicate effectively using visual, symbolic and/or language skills in various modes;
- use science and technology effectively and critically showing responsibility towards the environment and the health of others; and
- demonstrate an understanding of the world as a set of related systems by recognising that problem solving contexts do not exist in isolation.

(e) Inclusivity should become a central part of the organisation, planning and teaching at each school. This can only happen if all teachers have a sound understanding of how to recognise and address barriers to learning, and how to plan for diversity.

The key to managing inclusivity is ensuring that barriers are identified and addressed by all the relevant support structures within the school community, including teachers, District-Based Support Teams, Institutional-Level Support Teams, parents and Special Schools as Resource Centres. To address barriers in the classroom, teachers should use various curriculum differentiation strategies such as those included in the Department of Basic Education's *Guidelines for Inclusive Teaching and Learning* (2010).

## 1.4 Time Allocation

### 1.4.1 Foundation Phase

- (a) The instructional time in the Foundation Phase is as follows:

| SUBJECT                        | GRADE R<br>(HOURS) | GRADES 1-2<br>(HOURS) | GRADE 3<br>(HOURS) |
|--------------------------------|--------------------|-----------------------|--------------------|
| Home Language                  | 10                 | 8/7                   | 8/7                |
| First Additional Language      |                    | 2/3                   | 3/4                |
| Mathematics                    | 7                  | 7                     | 7                  |
| Life Skills                    | <b>6</b>           | <b>6</b>              | <b>7</b>           |
| Beginning Knowledge            | (1)                | (1)                   | (2)                |
| Creative Arts                  | (2)                | (2)                   | (2)                |
| Physical Education             | (2)                | (2)                   | (2)                |
| Personal and Social Well-being | (1)                | (1)                   | (1)                |
| <b>TOTAL</b>                   | <b>23</b>          | <b>23</b>             | <b>25</b>          |

- (b) Instructional time for Grades R, 1 and 2 is 23 hours and for Grade 3 is 25 hours.
- (c) Ten hours are allocated for languages in Grades R-2 and 11 hours in Grade 3. A maximum of 8 hours and a minimum of 7 hours are allocated for Home Language and a minimum of 2 hours and a maximum of 3 hours for Additional Language in Grades 1-2. In Grade 3 a maximum of 8 hours and a minimum of 7 hours are allocated for Home Language and a minimum of 3 hours and a maximum of 4 hours for First Additional Language.
- (d) In Life Skills Beginning Knowledge is allocated 1 hour in Grades R-2 and 2 hours as indicated by the hours in brackets for Grade 3.

### 1.4.2 Intermediate Phase

- (a) The instructional time in the Intermediate Phase is as follows:

| SUBJECT                         | HOURS       |
|---------------------------------|-------------|
| Home Language                   | 6           |
| First Additional Language       | 5           |
| Mathematics                     | 6           |
| Natural Sciences and Technology | 3,5         |
| Social Sciences                 | 3           |
| Life Skills                     | <b>4</b>    |
| Creative Arts                   | (1,5)       |
| Physical Education              | (1)         |
| Personal and Social Well-being  | (1,5)       |
| <b>TOTAL</b>                    | <b>27,5</b> |

#### 1.4.3 Senior Phase

- (a) The instructional time in the Senior Phase is as follows:

| SUBJECT                      | HOURS       |
|------------------------------|-------------|
| Home Language                | 5           |
| First Additional Language    | 4           |
| Mathematics                  | 4,5         |
| Natural Sciences             | 3           |
| Social Sciences              | 3           |
| Technology                   | 2           |
| Economic Management Sciences | 2           |
| Life Orientation             | 2           |
| Creative Arts                | 2           |
| <b>TOTAL</b>                 | <b>27,5</b> |

#### 1.4.4 Grades 10-12

- (a) The instructional time in Grades 10-12 is as follows:

| SUBJECT   | TIME ALLOCATION PER WEEK (HOURS) |
|---|----------------------------------|
| Home Language   | 4.5                              |
| First Additional Language   | 4.5                              |
| Mathematics   | 4.5                              |
| Life Orientation  | 2                                |
| A minimum of any three subjects selected from <b>Group B Annexure B</b> , Tables B1-B8 of the policy document, <i>National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R-12</i> , subject to the provisos stipulated in paragraph 28 of the said policy document. | 12 (3x4h)                        |
| <b>TOTAL</b>  | <b>27,5</b>                      |

The allocated time per week may be utilised only for the minimum required NCS subjects as specified above, and may not be used for any additional subjects added to the list of minimum subjects. Should a learner wish to offer additional subjects, additional time must be allocated for the offering of these subjects.

## SECTION 2

### APPROACHING LIFE SCIENCES

#### 2.1 What is Life Sciences?

'Life Sciences' is the scientific study of living things from molecular level to their interactions with one another and their environments. To be accepted as a science, it is necessary to use certain methods for broadening existing knowledge, or discovering new things. These methods must lend themselves to replication and a systematic approach to scientific inquiry. The methods include formulating hypotheses and carrying out investigations and experiments as objectively as possible to test these hypotheses. Repeated investigations are carried out and adapted. The methods and results are analysed, evaluated and debated before the community of scientists accepts them as valid.

Knowledge production in science is an ongoing endeavour that usually happens gradually but, occasionally, knowledge and insights take a leap forward as new knowledge, or a new theory, replaces what was previously accepted. As with all knowledge, scientific knowledge changes over time as scientists improve their knowledge and understanding and as people change their views of the world around them. Scientific investigations are mostly about things that are poorly understood or not understood at all. Scientists are frequently involved in debates and disagreements. As more people take on such investigations, they tend to reach consensus about the ways in which the world works. The science theory that is taught in schools has been tested and is generally accepted. A good teacher will inform learners of debates and arguments among the scientists who were the first to investigate a phenomenon.

Scientists continue to explore the unknown. They tackle questions to which no-one has definite answers, such as: 'Why is the climate changing?'; 'What is causing the universe to expand?'; 'What causes the Earth's magnetic field to change?'; and 'What, exactly, is the human mind?'. No one knows for sure

By studying and learning about Life Sciences, learners will develop:

- their knowledge of key biological concepts, processes, systems and theories;
- an ability to critically evaluate and debate scientific issues and processes;
- greater awareness of the ways in which biotechnology and knowledge of Life Sciences have benefited humankind;
- an understanding of the ways in which humans have impacted negatively on the environment and organisms living in it;
- a deep appreciation of the unique diversity of past and present biomes in Southern Africa and the importance of conservation;
- an awareness of what it means to be a responsible citizen in terms of the environment and life-style choices that they make;
- an awareness of South African scientists' contributions;
- scientific skills and ways of thinking scientifically that enable them to see the flaws in pseudo-science in popular media; and

- a level of academic and scientific literacy that enables them to read, talk about, write and think about biological processes, concepts and investigations.

## 2.2 Life Sciences as a School Subject

Life Sciences is the study of life at various levels of organisation and comprises a variety of sub-disciplines, or specialisations, such as:

- Biochemistry;
- Biotechnology;
- Microbiology;
- Genetics;
- Zoology;
- Botany;
- Entomology;
- Physiology (plant and animal);
- Anatomy (plant and animal);
- Morphology (plant and animal);
- Taxonomy (plant and animal);
- Environmental Studies; and
- Sociobiology (animal behaviour).

At school level, all of these sub-disciplines are introduced, to varying degrees, to provide a broad overview of the subject, Life Sciences. The three main reasons for taking Life Sciences are:

- to provide useful knowledge and skills that are needed in everyday life
- to expose learners to the scope of biological studies to stimulate interest in and create awareness of possible specialisations; and
- to provide a sufficient background for further studies in one or more of the biological sub-disciplines.

## 2.3 The Organisation of the Life Sciences Curriculum

The Life Sciences content framework is organised according to four ‘knowledge strands’. Knowledge strands are developed progressively over the three years of FET. These knowledge strands are:

- Knowledge Strand 1: Life at the Molecular, Cellular and Tissue Level;
- Knowledge Strand 2: Life Processes in Plants and Animals

- Knowledge Strand 3: Environmental Studies;
- Knowledge Strand 4: Diversity, Change and Continuity.

These Knowledge Strands and the topics within each knowledge strand should not be studied separately or independently. The Knowledge Strands do not need to be taught in the same sequence each year, nor do all four Knowledge Strands have to be covered in each year. This categorisation is simply a tool for organising the subject content and they are also not weighted equally. When teaching Life Sciences, it is very important to help learners to recognise the links between related topics so that they acquire a thorough understanding of the nature and interconnectedness of life. These links must also be made across grades.

### Life Sciences: Concept and Content Progression

| Strands  | Life at molecular, cellular, and tissue level   | Life processes in plants and animals   | Diversity, change and continuity  | Environmental studies   |
|----------|---|--|---|---|
| Grade 10 | <ul style="list-style-type: none"> <li>• Chemistry of life           <ul style="list-style-type: none"> <li>- Inorganic compounds</li> <li>- Organic compounds</li> </ul> </li> <li>• Cell - unit of life</li> <li>• Cell division (mitosis)</li> <li>• Plant and animal tissues</li> </ul> | <ul style="list-style-type: none"> <li>• Support and transport systems in plants</li> <li>• Support systems in animals</li> <li>• Transport system in mammals</li> </ul>   | <ul style="list-style-type: none"> <li>• Biodiversity and classification</li> <li>• History of life on Earth</li> </ul>   | <ul style="list-style-type: none"> <li>• Biosphere to ecosystems</li> </ul>   |
| Grade 11 |   | <ul style="list-style-type: none"> <li>• Energy transformations to support life: photosynthesis</li> <li>• Animal nutrition</li> <li>• Energy transformations: respiration</li> <li>• Gas exchange</li> <li>• Excretion</li> </ul> | <ul style="list-style-type: none"> <li>Biodiversity - classification of microorganisms</li> <li>• Biodiversity - plants</li> <li>• Reproduction - plants</li> <li>• Biodiversity - animals</li> </ul> | <ul style="list-style-type: none"> <li>• Population ecology</li> <li>• Human impact on environment: current crises</li> </ul> |
| Grade 12 | <ul style="list-style-type: none"> <li>• DNA code of Life</li> <li>• RNA and protein synthesis</li> <li>• Meiosis</li> </ul>  | <ul style="list-style-type: none"> <li>• Reproduction in vertebrates</li> <li>• Human reproduction</li> <li>• Nervous system</li> <li>• Senses</li> <li>• Endocrine system</li> <li>• Homeostasis</li> </ul>                       | <ul style="list-style-type: none"> <li>• Darwinism and Natural Selection</li> <li>• Human evolution</li> </ul>  | <ul style="list-style-type: none"> <li>• Human impact on environment: current crises Grade 11</li> </ul>                      |

The content framework focuses on ideas, skills and concepts as well as connections between them, rather than on listing the facts and procedures that need to be learned. It also does not prescribe particular instructional strategies or methodologies. Instead, educators have the freedom to expand concepts and to design and organise learning experiences according to their local circumstances, including the availability of resources.

In Grade 10, all four Knowledge Strands are addressed and serve to introduce learners to the four strands.

The recommended Grade 10 teaching sequence for the four Knowledge Strands is:

1. Life at Molecular, Cellular and Tissue level (Molecules to organs)
2. Life Processes in Plants and Animals (Processes that sustain life)
3. Environmental Studies (Biosphere to Ecosystems)
4. Diversity, Change and Continuity (History of Life on Earth)

The rationale for this order In Grade 10 is that some areas of South Africa are best suited for an environmental study during early spring and also because seasonal comparisons in a chosen ecosystem are required where possible. Some teachers may elect to deal with the Environmental Study at the beginning of the year. However it is important to retain the sequence of Knowledge Strand 1 **before** Knowledge Strand 2 and Knowledge Strand 3 before Knowledge Strand 4. Decisions regarding the sequence (starting the year with Knowledge Strands 1 and 2 or starting the year with Knowledge Strands 3 and 4) must be made by teachers.

The first section in Grade 10, called “Subject Orientation”, is designed to prepare learners for the FET phase, and is intended to:

- connect what learners learned in the GET (Natural Sciences) with what they will be learning in the FET (Life Sciences). The Life Sciences subject builds on knowledge and skills acquired from the Life Sciences knowledge areas in GET.
- describe how knowledge is built/constructed  and introduces the scientific approach that both teachers and learners are required to use when teaching and learning Life Sciences.
- introduce learners to some basic principles related to science.
- familiarise learners with the range of skills that they will need to develop.

The orientation should be done in the first lessons as an introduction but is **not** part of the assessable curriculum although the principles and skills will be assessed **in the context** of specific content during the year. Learners will have been exposed to similar orientations at the start of the Senior Phase (Grade 7) and at the start of High School (Grade 8). The orientation on Grade 10 should then simply remind learners of what is expected of them and expand on some of the aspects.

In Grade 11, three of the four Knowledge Strands are addressed and serve to ensure progression. The content described in Life at Molecular, Cellular and Tissue level in Grade 10 is used to understand Life Processes in Plant and Animals in Grade 11 but it is not taught as a separate strand in Grade 11.

The recommended Grade 11 teaching sequence for the three Knowledge Strands is:

1. Diversity, Change and Continuity (Microorganisms, Plants and Animals)
2. Life Processes in Plants and Animals (Processes that sustain life)
3. Environmental Studies (Population Ecology and Human Impact)

In Grade 12, three of the four Knowledge Strands are addressed and serve to ensure progression. The content described in Environmental Studies: Human Impacts (Current Crises) is dealt with in Grade 11 in order to lessen the pressure in Grade 12 but this Knowledge Strand will be examined in the National Senior Certificate examination at the end of Grade 12.

The recommended **Grade 12** teaching sequence for the four Knowledge Strands is:

1. Life at Molecular, Cellular and Tissue level (DNA and protein synthesis)
2. Life Processes in Plants and Animals (Processes that sustain life)
3. Diversity, Change and Continuity (Darwinism and Human Evolution)
4. Environmental Studies (Human Impact, taught and assessed in Grade 11)

The identified range of cognitive and practical skills must be taught, and assessed, in an integrated way in the context provided by the topics in the four Knowledge Strands in each year in the FET band.

#### 2.4 The Purpose of Studying Life Sciences

- *The development of Scientific Knowledge and Understanding*

Scientific knowledge and understanding can be used to answer questions about the nature of the living world around us. It can prepare learners for economic activity and self-expression and it lays the basis of further studies in science and prepares learners for active participation in a democratic society that values human rights and promotes acting responsibly towards the environment.

- *The Development of Science Process Skills (Scientific Investigations)*

The teaching and learning of science involves the development of a range of process skills that may be used in everyday life, in the community and in the workplace. Learners can gain these skills in an environment that supports creativity, responsibility and growing confidence. Learners develop the ability to think objectively and use different types of reasoning while they use process skills to investigate, reflect, synthesise and communicate.

- *The Development of an Understanding of Science's Roles in society*

Both science and technology have made a major impact, both positive and negative, on our world. A careful selection of scientific content and the use of a variety of methods to teach and learn science should promote the understanding of science as a human activity as well as the history of science and the relationship between Life Sciences and other subjects. It also helps learners to understand the contribution of science to social justice and societal development as well as the need for using scientific knowledge responsibly in the interest of ourselves, society and the environment. Moreover, understanding science also helps us to understand the consequences of decisions that involve ethical issues.

## 2.5 Specific Aims

There are **three** broad subject-specific aims in Life Sciences which relate to the purposes of learning science. These are:

1. Specific Aim 1, which relates to knowing the subject content ('theory');
2. Specific Aim 2, which relates to doing science or practical work and investigations; and
3. Specific Aim 3, which relates to understanding the applications of Life Sciences in everyday life, as well as understanding the history of scientific discoveries and the relationship between indigenous knowledge and science.

### WHAT DO THE THREE AIMS MEAN AND HOW DO THEY RELATE TO ASSESSMENT?

#### 2.5.1 Specific Aim 1: Knowing Life Sciences

(Life Sciences concepts, processes, phenomena, mechanisms, principles, theories, laws, models, etcetera).

Specific Aim 1 involves knowing, understanding, and making meaning of sciences, thereby enabling learners to make many connections between the ideas and concepts. Making such connections makes it possible for learners to apply their knowledge in new and unfamiliar contexts. The process of acquiring a deep understanding of science is about more than just knowing a lot of facts. The scope of knowledge that learners should acquire includes knowledge of the process skills related to carrying out investigations.

The following cognitive (thinking) skills comprise the **range** of skills that all learners should develop by working through the curriculum in a school year. These skills indicate what should be assessed at **the appropriate grade level** in a variety of different kinds of assessments. Note that not every skill is assessed in every assessment, but that teachers must ensure that, by the end of the year, the assessments provide evidence that the range of different skills have been assessed for each learner.

##### 2.5.1.1 Acquire Knowledge

In the process of acquiring knowledge learners must:

- **access** information from a variety of sources (teachers, reference books, textbooks, internet, experts, peers, parents, etc.);
- **select** key ideas;
- **recall** facts; and
- **describe** concepts, processes, phenomena, mechanisms, principles, theories, laws and models in Life Sciences.

#### Assessment

In order to assess these competences (or cognitive skills), teachers should use the following verbs in the tasks or assessments that they set: state, name, label, list, define, describe and any other verbs that indicate that learners' **knowledge** of the subject is being assessed.

## 2.5.1.2 Understand and Make Connections Between Ideas and Concepts to Make Meaning of Life Sciences

In the process of making meaning and achieving understanding learners must:

- **build a conceptual framework** of science ideas;
- **organise or reorganise** knowledge to derive new meaning;
- **write summaries;**
- **develop** flow charts, diagrams and mind maps; and
- **recognise** patterns and trends.

### Assessment

In order to assess these competencies (cognitive skills), teachers should use the following verbs in the tasks or assessments they set: explain, compare, rearrange, give an example of, illustrate, calculate, interpret, suggest a reason, make a generalisation, interpret information or data, predict, select, differentiate or any other suitable verbs that indicate that learners' understanding of the subject is being assessed.

## 2.5.1.3 Apply Knowledge on Life Sciences in New and Unfamiliar Contexts

Learners must be able to:

- **use** information in a new way; and
- **apply** knowledge to new and unfamiliar contexts.

### Assessment

In order to assess these competencies (cognitive skills), teachers should use the following verbs in the tasks or assessments that they set: demonstrate, interpret, predict, compare, differentiate, illustrate, solve and select as well as any other appropriate verbs that assess a learner's ability to apply knowledge. The key is that learners must be able to apply knowledge in a context or situation for which they have not yet acquired specific knowledge, or use the knowledge in a new way.

## 2.5.1.4 Analyse, Evaluate and Synthesise Scientific Knowledge, Concepts and Ideas

In the process of learning science, learners must be able to:

- **analyse** information/data;
- **recognise** relationships between existing knowledge and new ideas;
- **critically evaluate** scientific information;
- **identify** assumptions; and
- **categorise** information.

## Assessment

In order to assess these competencies (cognitive skills), teachers should use the following verbs in the tasks or assessments that they set: appraise, argue, judge, select, evaluate, defend (a point of view), compare, contrast, criticise (an argument or assumption) differentiate, distinguish, discuss or any other suitable verbs that indicate that analysis, evaluation and synthesis are being assessed.

### 2.5.2 Specific Aim 2: Investigating Phenomena in Life Sciences

Learners must be able to plan and carry out investigations as well as solve problems that require some practical ability. This ability is underpinned by an attitude of curiosity and an interest in wanting to find out how the natural world and living things in it work.

The following range of skills relates to **doing** practical work in Life Sciences. All seven skills will not apply to every activity equally. The skills are aligned to what learners would be doing in the normal course of carrying out an investigation. Teachers must select those skills that apply to and can be assessed in the context of specific activities. By the end of the Grade 10 year, all seven skills must have been assessed at a **grade-appropriate** level.

**Note:** While **doing** practical investigations involves a specific range of skills, learners' knowledge on and understanding of science can, and should, be assessed within the context of the cognitive domains of Specific Aim 1.

Learners must be able to:

#### 2.5.2.1 Follow Instructions

This is essential, especially in the lower grades and in large classes. Teachers cannot expect all learners to use unfamiliar equipment and to do so independently without giving them a clear set of instructions to follow. The amount of assistance required would indicate the level of performance in this regard. Adherence to safety rules should be part of this.

#### 2.5.2.2 Handle Equipment or Apparatus

This should include having knowledge of the apparatus, that is, being able to name it and knowing what it is used for. The learner should be able to use different kinds of equipment. 'Handling equipment' is a generic skill and applies to any equipment used for many different kinds of investigations. Handling improvised equipment requires the same skills as would be required for handling standard laboratory equipment. The emphasis is on **using** equipment appropriately and safely (and not on only memorising the names of apparatus).

#### 2.5.2.3 Make Observations

A variety of observations are possible and observations can be recorded in different ways, such as:

- drawings;
- descriptions;
- grouping of materials or examples based on observable similarities and/or differences;
- measurements;
- comparing materials before and after treatment;

- observing results of an experimental investigation which will involve recording information in an appropriate way; and
- counting.

#### 2.5.2.4 Record Information or Data

This should include recording observations or information as drawings, descriptions, in simple table format, as simple graphs, etc. The skill of ‘recording’ is transferable across a range of different scientific activities.

#### 2.5.2.5 Measure

Learners should know **what** to measure, **how** to measure it and have a sense of the degree of accuracy that is required. A variety of things could be measured including (but not limited to) length, volume, temperature, weight or mass and numbers (counting). Measuring is a way of quantifying observations and in this process learners should learn to make estimations.

#### 2.5.2.6 Interpret

Learners should be able to convert information from one form, in which it was recorded, into another, for instance converting a table into an appropriate graph.

Learners should be able to perform **appropriate** simple calculations, to analyse and extract information from tables and graphs, apply knowledge of theory to practical situations, recognise patterns and/or trends, appreciate the limitations of experimental procedures as well as make deductions based on evidence.

#### 2.5.2.7 Design/Plan Investigations or Experiments

Not all investigations are based on the ‘classic’ dependent-independent variables and controls. For example, an investigation could involve observing soil profiles or counting populations.

Designing an investigation is a different process to planning an investigation. In the design process options need to be considered in terms of the hypothesis and variables may have to be identified.

Skills include:

- identifying a problem;
- hypothesising;
- selecting apparatus or equipment and/or materials;
- identifying variables;
- suggesting ways of controlling variables;
- planning an experiment;
- suggesting ways of recording results; and
- understanding the need for replication or verification.

In Grades 10, 11 and 12, learners must be able to plan and/or design a simple investigation or experiment.

**Note:** Skills 2.5.2.1-2.5.2.6 (following instructions, handling equipment, making observations, recording information, measuring and interpreting information) are all required, in one form or another, to carry out an experiment or investigation. By separating seven different kinds of skills (2.5.2.1-2.5.2.7), these skills can apply to the **variety** of practical work that is appropriate for a particular grade in Life Sciences, including simple investigations or experiments. This approach makes it easier to assess learners in a range of different circumstances and it enables a teacher to judge a learner's ability to **do** science. The skills are based on what learners will be doing actions during the normal course of doing practical work. However, there are some circumstances in which only some of these skills would apply and not every skill can be assessed in every practical task.

### 2.5.3 Specific Aim 3: Appreciating and Understanding the History, Importance and Applications of Life Sciences in Society

The third aim of Life Sciences is to enable learners to understand that school science can be relevant to their lives outside of the school and that it enriches their lives.

Learners must be exposed to the history of science and indigenous knowledge systems from other times and other cultures. Scientific knowledge and understanding have been developed over time by people who were curious and who persevered with their quest for knowledge. Our present understanding of science will change and improve as modern scientists make new discoveries.

The skills that can be developed in the process of achieving Specific Aim 3 are cognitive rather than practical. These are the same cognitive skills as the ones identified for Specific Aim 1.

Since the knowledge that will be acquired in respect of Specific Aim 3 always relates to specific subject content, the content provides the context for learning about various aspects of science in society. Science should therefore be taught in an integrated way in order to both enhance the subject and to clarify the relationship between the subject and society i.e. indigenous knowledge systems that relate to a specific topic, related history of scientific discoveries and the applications of science in everyday life.

#### 2.5.3.1 Understanding the History and Relevance of Some Scientific Discoveries

The subject content provides the context for learning about the history of scientific discoveries and their relevance for society. These aspects, the history and relevance, should be linked to and taught in conjunction with the topics and content that are related to a particular discovery or a particular scientist.

#### 2.5.3.2 The Relationship Between Indigenous knowledge and Life Sciences

All knowledge stems from views on how the world works. One of the differences between modern science (and technology) and traditional, indigenous knowledge systems is that they have their origins in different world views. Learners should understand the different cultural contexts in which indigenous knowledge systems were developed.

The examples of indigenous knowledge that are selected for study should, as far as possible, reflect different South African cultural groups. They should also link directly to specific areas in the Life Sciences subject content.

#### 2.5.3.3 The Value and Application of Life Sciences Knowledge in the Industry in Respect of Career Opportunities and in Everyday Life

Knowledge of Life Sciences is applied in and relevant to various aspects of society. Examples should be relevant to the subject content that learners are dealing with at a particular time. There are career opportunities in the field of socio-biology and animal behaviour, plant pathology, game management, environmental impact studies, preservation

of biodiversity, palaeontology, palaeoanthropology, agriculture, horticulture, environmental law, science journalism, biotechnology, genetic engineering, and many others. Moreover, although learners should be made aware of career choices, it is not necessary to discuss or teach these in great detail.

## Skills

Whilst the kind of knowledge is different for Specific Aims 1 and 3, the content should be taught in an integrated way in order for learners to understand the history, relevance and applications of science more easily. Importantly, the skills that must be developed and assessed for Specific Aim 3 are the same as those of Specific Aim 1 (under 2.5).

Learners must be able to:

- **access** information;
- **select** key ideas;
- **recall** information;
- **describe** knowledge of natural sciences;
- **build a conceptual framework**;
- **organise** or **reorganise** knowledge;
- **write** summaries;
- **develop** flow charts and mind maps;
- **recognise** patterns and trends;
- **apply** knowledge in new contexts;
- **use** knowledge in a new way;
- **analyse** information/data;
- **critically evaluate** scientific information;
- **recognise** relationships between existing; knowledge and new ideas;
- **identify** assumptions; and
- **categorise** information.

The three aims are aligned with the three learning outcomes with which teachers are familiar. Within each of these aims, specific skills or competences have been identified. It is not advisable to try to assess each of the skills separately, nor is it possible to report on individual skills separately. However, **well designed assessments** must show **evidence** that, by the end of the year, all of the skills have been assessed **at a grade-appropriate level**. There must be a clear link between the aims and the outcomes of learning. The processes of teaching, learning and assessment will provide the links between the specific aims and the achievement of the outcomes.

### 2.5.4 Developing Language Skills: Reading and Writing

Teachers of Life Sciences should be aware that they are also engaged in teaching language across the curriculum. This is particularly important for learners for whom the Language of Learning and Teaching (LoLT) is not their home language. It is important to provide learners with opportunities to develop and improve their language skills in the context of learning Life Sciences. It will therefore be critical to afford learners opportunities to read scientific texts and to write reports, paragraphs and short essays as part of the assessment, especially in (but not limited to) the informal assessments **for** learning.

### 2.6 Time

The time allocation for Life Sciences is 4 hours per week in Grades 10 to 12.

The curriculum for **Grade 10** has been designed to be completed within 32 weeks out of 40 weeks in the school year. This leaves 8 weeks in the year for examinations, tests and disruptions due to other school activities.

The curriculum for **Grade 11** has been designed to be completed within 32 weeks out of 40 weeks in the school year. This leaves 8 weeks in the year for examinations, tests and disruptions due to other school activities.

The curriculum for **Grade 12** has been designed to be completed within 27½ weeks out of 40 weeks in the school year. This leaves 12½ weeks in the year for examinations, tests and disruptions due to other school activities.

In Grades 10, 11 and 12 the time allocated for the teaching of the content **includes the practical tasks and investigations. These are an integral part of the teaching and learning process.**

### 2.7 Resources

The resources needed for teaching Life Sciences are listed next to each topic in order to assist teachers with planning and preparation.

Every learner must have his or her own textbook. Teachers should ensure that a system is in place for recovering textbooks at the end of every year. Schools must provide secure storage space where textbooks and other equipment can be stored safely.

Ideally, every learner should have access to sufficient workspace and equipment to carry out investigations. For safety reasons, no more than three learners may share space and equipment in instances where space and equipment are limited due to large classes. With regard to equipment, schools must make every effort to ensure that the essential equipment is provided.

While it is acknowledged that it is not ideal to use improvised equipment, teachers should remember that it is more important for learners to have the experience of carrying out a variety of investigations than to depend on the availability of standard laboratory equipment. If equipment is limited, teachers should be encouraged to improvise. The same skills can be developed using improvised equipment. Moreover, if there are no alternatives, it is more effective for teachers to demonstrate an investigation than to not do investigations at all due to a lack of equipment. Secure storage for equipment and chemicals must be provided by the school.

Teachers should ensure that learners are familiar with rules regarding the safe use of equipment and chemicals. The Life Sciences classroom or laboratory should be equipped with charts, Bunsen burners or spirit lamps, hand lenses, bioviewers and relevant biostrips, microscopes, a set of prepared slides, glass slides and cover slips, reference

books, blades or scalpels, models, field guides, identification keys, thermometers, glass beakers, test tubes and chemicals, and, if at all possible, access to appropriate DVDs and a DVD player.

Fresh plant material can be obtained from the surroundings and teachers should ensure that appropriate plants (e.g., *Impatiens*) are planted on the school grounds. Fresh animal material can very often be obtained at reasonable prices from local butchers.

Teachers must be qualified to teach the subject and must familiarise themselves with the equipment and how it is used.

## SECTION 3

### 3.1 LIFE SCIENCES FOR GRADE 10: CONTENT

The first part of the curriculum in Grade 10, called ‘Subject Orientation’, is included to prepare learners for Life Sciences in the FET band. Its purpose is to:

- familiarise learners with the way in which the teacher will organise learning activities;
- familiarise learners with the behaviour that will be required and rules of safety;
- connect what learners have learnt in the Senior Phase with what they will learn and the range of skills that they must develop in FET;
- describe how knowledge is constructed in Life Sciences and to confirm a scientific approach that both teachers and learners will be required to use when teaching and learning Life Sciences; and
- introduce learners to some basic principles related to Life Sciences

| Time  | Orientation to Life Sciences: Subject Orientation  |  |
|---|--|--|
| <b>½ week<br/>(2 hours)</b> <p>The nature of science: science involves contested knowledge, and non-dogmatic inferences based on evidence and peer review.</p> <p><b>How Science Works:</b> Science is based on:</p> <ul style="list-style-type: none"> <li>• fundamental knowledge built on scientific evidence and verified findings (articles that are published in journals or at conferences; peer review);</li> <li>• observing;</li> <li>• investigating;</li> <li>• making measurements and understanding the importance of scaling;</li> <li>• collecting and presenting data in the form of drawings, written descriptions, tables and graphs;</li> <li>• understanding the limitations of scientific evidence;</li> <li>• identifying patterns and relationships in data;</li> <li>• communicating findings; and</li> <li>• taking societal aspects of scientific evidence into account.</li> </ul> <p>Scientific skills involve:</p> <ul style="list-style-type: none"> <li>• importance of biological principles such as relationship between surface area and volume/size, the relationship between structure and function</li> <li>• biological drawings: principles that apply</li> <li>• translating 3 dimensional objects or specimens into 2 dimensional drawings and photographs and interpreting 2 dimensional drawings and photographs: transverse and longitudinal sections</li> <li>• general introduction to the range of skills listed under the Specific Aims that must be developed</li> <li>• introduction to graphs: different kinds of graphs and when to use them; interpreting graphs.</li> <li>• calculating</li> </ul> |  <p>Organisation of learning and rules include:</p> <ul style="list-style-type: none"> <li>• using equipment and other resources;</li> <li>• understanding procedures and how to safely use apparatus in laboratories and classrooms;</li> <li>• working in groups;</li> <li>• understanding assessment requirements; and</li> <li>• a very brief mention of careers and subject combinations for entrance to higher education.</li> </ul> <p><b>Note:</b> This introduction is not assessable. However, the relevant aspects must be incorporated into in the context of the specific content where they apply, and will then be assessed.</p> |  |

| TERM 1  |                       |  |  |
|---|-----------------------|--|--|
| <b>Strand 1: Life at the Molecular, Cellular and Tissue Level</b> |                       |  |  |
| Time  | Topic                 | Content  | Investigations   |
| 2½ weeks<br>(10 hours)  | The Chemistry of Life | <p><b>Molecules For Life</b></p> <p>Organic molecules are made up of C, H, and O, and some contain other elements, such as N and P. Cells are made up of proteins, carbohydrates, lipids, nucleic acids and vitamins.</p> <p>(Only basic structural detail required.)</p> <p><b>Inorganic Compounds</b></p> <ul style="list-style-type: none"> <li>The main functions of:           <ul style="list-style-type: none"> <li>water: 2 H and 1 O;</li> <li>minerals: e.g., Na, K, Ca, P, Fe, I, nitrates, phosphates; macro and micro elements; main functions and deficiency diseases (<i>link to nutrition and Grade 9</i>).</li> </ul> </li> </ul> | <p><b>Optional:</b></p> <ul style="list-style-type: none"> <li>Construct models of simple and more complex molecules using beads or plasticine.</li> <li>Test tubes</li> </ul> <p>A selection of food packaging showing nutritional content</p> |

| TERM 1                   |  |   |
|--------------------------|--|---|
| <b>Organic Compounds</b> | <p><b>Essential:</b></p> <ul style="list-style-type: none"> <li>carbohydrates - monosaccharides (single sugars), e.g., glucose and fructose; disaccharides, (double sugars), e.g., sucrose and maltose; polysaccharides (many sugars), e.g., starch, cellulose and glycogen;</li> <li>lipids (fats and oils) - 1 glycerol and 3 fatty acids: unsaturated and saturated fats; cholesterol in foods; and heart disease (<i>link to Grade 9</i>);</li> <li>proteins - amino acids (C, H, O and N and some have P, S, Fe) - are sensitive to temperature and pH: loss of structure and function; the role of enzymes in breaking down/synthesising molecules; the influence of temperature and pH on enzyme action; the Lock and Key Model of how enzymes work; enzymes in everyday life (for instance using washing powders);</li> <li>Mention of nucleic acids - DNA and RNA - consisting of C, H, O, N and P (no details of structure required); and vitamins - e.g., A, one of the B vitamins, C, D and E.</li> </ul> <p>(Simple diagrams to represent molecules. Review briefly why these substances are needed in plants and animals i.e. build on prior knowledge. Do not give detail of structure or function - functions will be dealt with in later sections where appropriate. This is a brief introduction to the molecular make-up of organisms.)</p> | <ul style="list-style-type: none"> <li>Food tests for starch, glucose, lipids and proteins.</li> <li>Investigate the working of a 'biological' washing powder (containing enzymes).</li> <li>Hydrogen Peroxide and chicken liver to demonstrate the effect of enzymes.</li> <li>Fresh pineapple juice and solid egg white in a plastic drinking straw.</li> <li>Pineapple juice, egg white and plastic drinking straws</li> </ul> <p>OR</p> <ul style="list-style-type: none"> <li>Bunsen burners</li> <li>Thermometers</li> <li>Washing powder</li> <li><math>\text{H}_2\text{O}_2</math> and chicken liver</li> </ul> <p>OR</p> <ul style="list-style-type: none"> <li>Observe, measure and record results of the experiment done at different temperatures.</li> <li>Compare the Recommended Daily Allowance (RDA) with usual diet of individual learners. Draw a pie chart of the food types and discuss implications of the usual diet of learners.</li> </ul> |

| TERM 1                |   |
|-----------------------|---|
| 3 weeks<br>(12 hours) | <p><b>Cells: The Basic Units of Life</b></p> <p><b>Molecular Make-Up</b><br/>Cells are mostly made up of proteins, carbohydrates, lipids, nucleic acids and water.</p> <p>Brief overview of the history of microscopy: from lens and light microscopes and to electron microscopes. How these instruments enabled people to see cells and then structures within cells which led to cell theory.<br/><i>(Briefly revise Grade 9 work on the cell.)</i></p> <p><b>Cell Structure and Function: The Roles of Organelles</b></p> <ul style="list-style-type: none"> <li>cell wall - support structure in plant cells only;</li> <li>cell membrane - fluid mosaic model, boundaries and transport: movement across membranes: diffusion, osmosis and active transport;</li> <li>nucleus, chromatin material, nuclear membrane, nucleopores, nucleolus: the control centre, heredity;</li> <li>cytoplasm - storage and circulation of materials;</li> <li>mitochondria - release energy during cell respiration;</li> <li>ribosomes - protein synthesis;</li> <li>endoplasmic reticulum (rough and smooth) - transport systems;</li> <li>Golgi body - assembles secretions;</li> <li>plastids - production and storage of food and pigments; and</li> <li>vacuole, lysosomes, vesicles - storage, digestion and osmoregulation.</li> </ul> <p>Relate structure and location of organelles to their functions.</p> <p><i>(This is an introduction; some organelle functions will be explored in more detail in other sections.)</i></p> <p><b>Cells differ</b> in size, shape and structure in order to carry out specialised functions [<i>link to tissues</i>].</p> <p>The differences between plant and animal cells (<i>link to Grade 9</i>).</p> |

| TERM 1                         |                           |   |  |
|--------------------------------|---------------------------|---|--|
| 2 weeks<br>(8 hours)           | Cell Division:<br>Mitosis | <b>The Cell Cycle including Mitosis:</b><br>Interphase, mitosis (with names of phases), cytokinesis and growth.<br>The Continuous Process of Mitosis: The division of a cell to form two identical cells.<br><i>(Simple description with diagrams to show chromosome changes so that one parent cell forms two identical daughter cells.)</i> <ul style="list-style-type: none"> <li>The difference in telophase between plant and animal cells.</li> </ul> <b>Chromosomes:</b> are found in nuclei of all cells; two chromatids and centromere.<br><b>Role of Mitosis:</b> growth and repair; Reproduction in some simple organisms.<br><b>Cancer:</b> Uncontrolled cell division and growth | <ul style="list-style-type: none"> <li>Use suitable resources to examine cell division, e.g., microscope slides, micrographs, posters and models. Record observations as drawings.</li> </ul> <ul style="list-style-type: none"> <li>Textbooks</li> <li>Charts</li> <li>Micrographs/micro-scope slides</li> <li>Microscopes</li> <li>Reference books</li> </ul>      |
| 1 week<br>(4 hours)            | Plant and Animal Tissues  | <b>Introduction to tissues</b><br>Introduce the concept of a tissue as a group of similar cells adapted for a particular function; cell differentiation. Emphasise the relationship between their basic structure and function.<br><b>Plant Tissues</b><br>Xylem, phloem, parenchyma, collenchyma, sclerenchyma, epidermis and meristematic tissues.  | <ul style="list-style-type: none"> <li>Textbooks</li> <li>Charts</li> <li>Microscope slides</li> <li>Micrographs</li> <li>Microscopes</li> </ul> <ul style="list-style-type: none"> <li>Examine and identify some plant tissues using microscope, biostrips, micrographs or posters. Draw cells that make up these tissues to show specialised structure.</li> </ul> |
| Total<br>9 weeks<br>(36 hours) |                           |   |  |

|  | TERM 1  |
|--|---|
| <b>Assessment</b> <ul style="list-style-type: none"> <li>• One formal, recorded class test.</li> <li>• Assessment for learning (informal) using a variety of strategies and appropriate forms of assessment in tests, homework exercises, worksheets, reports, summaries, essays, etc.</li> </ul> <p>Refer to the range of skills listed under Specific Aims 1 and 3. Note that knowledge and understanding of investigations and practical work should also be assessed in written worksheets, reports, homework exercises and tests. The cognitive skills listed under Specific Aims 1 and 3 will also apply to knowledge and understanding of investigations.</p> | <ul style="list-style-type: none"> <li>• One practical task.</li> <li>• Refer to the range of skills specified under Specific Aim 2.</li> </ul> |

| TERM 2   |                                      |  |  |  |
|--|--------------------------------------|--|--|--|
| Strand 1: Life at Molecular, Cellular and Tissue Level (continued) |                                      |  |  |  |
| Time   | Topic                                | Content  | Investigations   | Resources  |
| 2 weeks (8 hours)  | Plant and Animal Tissues (continued) | <p><b>Animal Tissues</b><br/>The Four basic types with some examples:</p> <ul style="list-style-type: none"> <li>• epithelial;</li> <li>• connective;</li> <li>• muscle; and</li> <li>• nerve tissues</li> </ul> <p>The relationship between structure and function.<br/>(No detail required - some tissues, e.g., blood and nerves in the reflex arc, will be covered in more detail in relevant sections.)</p> <p> <b>Applications of Indigenous Knowledge Systems and Biotechnology</b></p> <ul style="list-style-type: none"> <li>• traditional technology, e.g., traditional medicines and healers;</li> <li>• medical biotechnology, e.g., immunity, vaccines, antibiotics and blood transfusions; and</li> <li>• the cloning of plant and animal tissues and stem cell research (ethics and legislation).</li> </ul> | <ul style="list-style-type: none"> <li>• Examine and identify some animal tissues using microscope, biostrips, micrographs or posters. Draw the cells that make up these tissues to show specialised structure.</li> </ul> <ul style="list-style-type: none"> <li>• Collect information on ONE field of biotechnology related to plant or animal tissues e.g., cloning, stem cell research or in vitro fertilisation.</li> </ul> | <ul style="list-style-type: none"> <li>• Textbook</li> <li>• Charts</li> <li>• Microscope slides/micrographs</li> <li>• Microscopes</li> <li>• Reference books</li> </ul>  |
| ½ week (2 hours)   | Organs                               | <p>Organs consist of a number of tissues. Leaf structure will be used as an example of an organ. Other organs will be dealt with in their relevant sections in life processes.</p> <p><b>Leaf Structure</b></p> <p>A cross-section of a dicotyledonous leaf to demonstrate and explain its structure in terms of its functions, i.e. photosynthesis, gas exchange and transport. Link this with plant tissues, appropriate cell organelles, movement across membranes and movement of molecules into, through and out of the leaf.</p>   | <p><b>Options:</b></p> <ul style="list-style-type: none"> <li>• Observe prepared slides of a cross section of a leaf.</li> <li>OR</li> <li>• Observe micrographs.</li> <li>OR</li> <li>• Observe bioviewer slide strips</li> </ul>   | <ul style="list-style-type: none"> <li>• Textbooks</li> <li>• Charts</li> <li>• Micrographs/bioviewers</li> <li>• Microscopes</li> <li>• Micrographs/bioviewers</li> </ul> |

## TERM 2

**Strand 2: Life Processes in Plants and Animals**

Learners explore the anatomy of plants and animals in respect of support and transport systems. In animals, the different support systems are compared, with a focus on the human support system and locomotion.

| 3 weeks<br>(12 hours) | Support and<br>Transport<br>Systems in<br>Plants | Anatomy of Dicotyledonous Plants ( <a href="#">link to Grade 7</a> )   | <ul style="list-style-type: none"> <li>Root and stem: the distribution of different tissues;</li> <li>the structure of cells in different tissues (<a href="#">link to plant tissues</a>)</li> <li>Secondary growth (<a href="#">link to cell division</a>); the annual rings in a tree trunk to assess age and to infer climate change.</li> </ul> |  <ul style="list-style-type: none"> <li>Use a microscope or micrographs to observe and draw cross sections of root and stem (plan only).</li> <li>If microscopes are available make mounts of, and draw, whole xylem vessels from celery or pumpkin stalks to see secondary thickening patterns.</li> <li>Pumpkin or celery stems</li> <li>Blades or scalpels</li> <li>Coloured ink/food colouring</li> </ul> | <ul style="list-style-type: none"> <li>Use a microscope or micrographs to observe and draw cross sections of root and stem (plan only).</li> <li>If microscopes are available make mounts of, and draw, whole xylem vessels from celery or pumpkin stalks to see secondary thickening patterns.</li> <li>Pumpkin or celery stems</li> <li>Blades or scalpels</li> <li>Coloured ink/food colouring</li> </ul> |
|-----------------------|--|--|---|--|--|
|                       |  | <b>Transpiration</b><br>The relationship between water loss and leaf structure ( <a href="#">link to Term 1</a> ).<br>Factors that affect the rate of transpiration are: | <ul style="list-style-type: none"> <li>temperature;</li> <li>light intensity;</li> <li>wind;</li> <li>humidity.</li> </ul>  | <ul style="list-style-type: none"> <li>Design an investigation to discover the effect of temperature, light intensity or humidity on transpiration rate (using a simple potometer). Identify variables and control variables.</li> <li>Investigate water uptake through the roots</li> </ul>   | <ul style="list-style-type: none"> <li>Potometer</li> <li>Beakers</li> <li>Leafy twigs</li> <li>Soft plant e.g., Busy Lizzie/<i>Impatiens</i></li> <li>Eosin</li> <li>Glass containers</li> </ul>  |

| TERM 2                |                            |   |  |
|-----------------------|----------------------------|---|--|
| 3 weeks<br>(12 hours) | Support Systems in Animals | Skeletons   |  |

| TERM 2  |   |
|---|---|
| <p><b>Joints</b></p> <ul style="list-style-type: none"> <li>• Fixed joints</li> <li>• Partly movable joints</li> <li>• Freely movable (synovial) joints. Structure of synovial joints: ball and socket; hinge, pivot and gliding.</li> </ul> <p><b>The roles of the following in human locomotion:</b></p> <ul style="list-style-type: none"> <li>• bones;</li> <li>• joints;</li> <li>• ligaments;</li> <li>• tendons;</li> <li>• antagonistic muscles (e.g., biceps/triceps).</li> <li>• The Structure of voluntary skeletal muscles: Myofibrils and muscle contraction.</li> <li>• Diseases that affect the skeleton: Rickets in children, osteoporosis, arthritis, etc.</li> </ul> <p><b>Total</b><br/><b>8½ weeks (34 hours)</b></p> | <ul style="list-style-type: none"> <li>• Observe and describe the movement which occurs at each of these types of joints. If possible, observe an X-ray of ball and socket and hinge joints</li> <li>• Microscope prepared slides<br/>OR</li> <li>• Micrographs</li> <li>• X-rays if possible</li> </ul> <p> Refer to the range of skills specified in Specific Aim 2.</p> <p>Refer to the range of skills specified in Specific Aims 1 and 3. Assessment for learning (informal) using a variety of strategies and appropriate forms of assessment in homework exercises, written worksheets, reports, summaries, essays, tests, etc.</p> <p>Note that knowledge and understanding of investigations and practical work should also be assessed in written worksheets, homework exercises, reports, tests, essays and examinations. The cognitive skills listed under Specific Aims 1 and 3 will also apply to knowledge and understanding of investigations.</p> |

**TERM 3**

**Strand 2: Life Processes in Plants and Animals (Continued))**

Learners study the transport systems of the human body.

| Time                          | Topic                                       | Content  | Investigations   | Resources  |
|-------------------------------|---|--|--|--|
| <b>3 weeks<br/>(12 hours)</b> | <b>Transport Systems in Mammals (Human)</b> | <p><b>Circulatory System</b></p> <ul style="list-style-type: none"> <li>The blood circulation system: pulmonary and systemic (double, closed) circulatory systems, including the:</li> <li>- heart and associated blood vessels;</li> <li>- heart internal and external structure related to functioning; and</li> <li>- cardiac cycle (the flow of blood through the heart)</li> <li>• The direction of blood flow: the difference between oxygenated and deoxygenated blood in different parts of the system (diagram or schematic drawing):</li> <li>- lungs and pulmonary system and associated blood vessels;</li> <li>- major organs and systemic system; the associated major blood vessels of the brain, small intestine, liver and kidneys.</li> <li>• The mechanisms for controlling the cardiac cycle and heart rate (pulse).</li> <li>• The blood vessels, including the structure and functioning of arteries, veins with valves and capillaries.</li> <li>• <b>Lymph:</b> the relationship between the blood system and lymphatic system. Functions of lymphatic system.</li> <li>• Diseases of the heart and circulatory system, e.g., high and low blood pressure, heart attacks and strokes, the treatments of heart diseases, e.g., stents, valve replacements, bypass surgery, pacemakers, and heart transplants (mention only).</li> </ul> | <ul style="list-style-type: none"> <li>Dissection of mammal heart (sheep, cow or pig) obtained from a butchery. Identify chambers, valves, muscle, and blood vessels.</li> <li>In pairs, measure the pulse of one learner before and after exercise. Record, interpret and explain the data presented as a graph.</li> </ul> | <ul style="list-style-type: none"> <li>Sheep, cow or pig heart obtained from a butchery.</li> <li>Scalpels or blades</li> <li>Stop watch or cell phone clocks</li> </ul> |

## TERM 3

**Strand 3: Environmental Studies**

Organisms interact with other organisms and with the environments in which they live in order to survive and produce offspring. The study of these interactions is called ecology. This section is structured to expose learners to some of the interactions that occur in nature and to the terminology and concepts that describe them. For the Grade 11 curriculum, the terminology and concepts selected here will be used across all strands, where appropriate. This will enable learners to contextualise the meaning of these terms and concepts within the familiar contexts of their local area as well as Southern Africa as a whole. The local area context is also used to introduce how humans influence the environments in which they and other organisms live. The effect man has had on the environment - both locally and globally - will be examined in more detail in Grade 11. This section also builds on the knowledge that has been acquired during the Senior Phase.

| Time                  | Topic                   | Content   | Investigations  | Resources  |
|-----------------------|-------------------------|---|---|--|
| 6 weeks<br>(24 hours) | Biosphere to Ecosystems | <p><b>Biosphere</b></p> <ul style="list-style-type: none"> <li>The concept of the biosphere.</li> <li>The inter-connectedness with and components of the global ecosystem: the hydrosphere, lithosphere and atmosphere (<i>Links to Grade 8</i>).</li> </ul> <p><b>Biomes</b></p> <ul style="list-style-type: none"> <li>Terrestrial and aquatic biomes of southern Africa and how climate, soils and vegetation influence the organisms found in each.</li> <li>The location of the different biomes in South Africa.</li> </ul> <p><b>Environment</b></p> <p>The concept of environment in terms of human activities in and interactions with the natural environment. Abiotic and biotic factors: effects on the community.</p> <p><b>Ecosystems</b></p> <p>The concept of ecosystem, structure and ecosystem functioning:</p> <ul style="list-style-type: none"> <li><b>Abiotic factors:</b> <ul style="list-style-type: none"> <li>- physiographic factors (aspect, slope, and altitude)</li> <li>- soil (pH, humus content, texture, water retention capacity and air content)</li> <li>- light (day length and seasonal changes)</li> <li>- temperature (effect of day/night and seasons)</li> <li>- water (water cycle and the importance of wetlands)</li> </ul> </li> </ul> | <p><b>Fieldwork</b></p> <p>Choose ONE ecosystem (close to the school) within a local biome for special study. The study must:</p> <ul style="list-style-type: none"> <li>deal with abiotic and biotic factors and the interactions between them;</li> <li>the trophic relationships in an ecosystem;</li> <li>record and describe seasonal changes over two terms either Terms 1 and 2 or Terms 3 and 4</li> <li>biodiversity within the ecosystem using field guides and keys</li> <li>positive and/or negative human impact on the ecosystem</li> </ul> | <ul style="list-style-type: none"> <li>Identification guides and keys to groups of organisms</li> <li>Access to an ecosystem</li> <li>Map of South Africa</li> <li>DVDs</li> <li>The internet</li> <li>Nature programmes on TV</li> <li>Local information</li> <li>Appropriate instruments for measuring abiotic factors.</li> </ul> |

The cognitive skills listed under Specific Aims 1 and 3 will also apply to the knowledge and understanding of investigations.</p> |

## TERM 4

**Strand 4: Diversity, Change and Continuity**

Life exists in a huge array of forms and modes of life which scientists organise according to man-made classification systems. Modern life forms have a long history, extending from the first bacteria, around 3,5 billion years ago. South Africa has a rich fossil record of some key events in the history of life. Changes in life forms are related to climate changes as well as movements of continents and oceans over long periods of time.

| Time                | Topic  | Content   | Investigations  | Resources   |
|---------------------|--|---|---|---|
| 1 week<br>(4 hours) | <b>Biodiversity</b><br><br><b>Classification</b> | <p><b>Biodiversity</b></p> <p>Enormous biodiversity on Earth (large variety of species, different ecosystems and genetic differences) with an emphasis on the extent of biodiversity and endemism in southern Africa: indigenous and endemic species.</p> <ul style="list-style-type: none"> <li><b>Classification Schemes</b></li> </ul> <p>Classification schemes are a way of organising biodiversity</p> <ul style="list-style-type: none"> <li>Brief history of classification: Scientists attempt to classify organisms based on shared features. As information increases classification changes.</li> <li>One of the currently accepted classification systems is the five-kingdom system: Animalia, Plantae, Fungi, Protista and Monera (Bacteria).</li> <li>The naming of things in science: species concept and binomial system. Focus on Linnaeus (Carl von Linne) and his role in classification systems: Why do we use Latin?</li> <li>Differences between prokaryotes and eukaryotes (<i>link to cell structure</i>).</li> <li>The main groupings of living organisms, diagnostic features of each: <ul style="list-style-type: none"> <li>- Bacteria</li> <li>- Protista</li> <li>- Fungi</li> <li>- Plants</li> <li>- Animals</li> </ul> </li> </ul> | <ul style="list-style-type: none"> <li>Principles of classification by grouping everyday objects on the basis of shared similarities into a simple nested hierarchy.</li> </ul> | <ul style="list-style-type: none"> <li>Textbooks</li> <li>Photographs</li> <li>Micrographs</li> </ul> <ul style="list-style-type: none"> <li>A selection of everyday objects</li> <li>Identification guides</li> <li>Keys to groups of organisms</li> </ul> |

## TERM 4

|                                     |  |   |   |
|-------------------------------------|--|---|---|
| <b>5 weeks</b><br><b>(20 hours)</b> | <b>History of Life on Earth</b> <ul style="list-style-type: none"> <li>Changes in the composition of the atmosphere (eg. increases in the levels of oxygen)</li> <li>changes in climate (eg. ice ages)</li> <li>geological events (eg. movements of continents) and their effect on the distribution of living organisms (biogeography)</li> </ul> | <p>Evidence for changing sea level and rise and fall of the land (eg. bivalves and ammonites found on the Makhathini Flats in Northern KZN, whale fossils in the Sahara, trilobites in the Karoo)</p> <ul style="list-style-type: none"> <li>The three eras: Paleozoic, Mesozoic and Cenozoic periods are each divided into periods (<i>Names of periods not to be memorised</i>):</li> <li><b>Geological Timescale</b><br/>The meaning and use of timescales (<i>details not to be memorised</i>).</li> <li><b>Cambrian Explosion</b><br/>The Cambrian Explosion, which gives us insights into the origins of the major forms of all animal groups.</li> </ul> | <ul style="list-style-type: none"> <li>Construct a timeline showing the history of life on Earth. The timeline should show key events from the emergence of the earliest life forms to the present day to emphasise the long history of life.</li> <li>Research 'missing link' between dinosaurs and birds eg. <i>Archaeopteryx</i></li> </ul> <p><i>Coelacanth as an example of a "living" fossil found off the coast of South Africa</i></p> <p>Present a verbal or written report.</p> <ul style="list-style-type: none"> <li>Various hypotheses have been proposed for the extinction, 65 million years ago, such as the meteorite impact theory and the volcanism evidence (in India) theory. Select ONE of these hypotheses and describe the evidence scientists have gathered in support of it. (<i>Nature of science</i>)</li> </ul> <p>In the last four million years, significant changes have occurred in species occurring in Africa (e.g., humans) (<i>Link with Grade 12</i>).</p> <ul style="list-style-type: none"> <li><b>Mass Extinctions</b><br/>There have been five mass extinctions throughout history, two of which are particularly important: 250 mya (the extinction of about 90% of all life on Earth) and 65 Mya (the extinction of many species, including the dinosaurs).<br/>The rate of extinction on the Earth at present is higher than at any time in the past. The present time has been called the sixth extinction (<i>Links to Grades 11 and 12</i>).</li> </ul> |
|-------------------------------------|--|---|---|

| TERM 4   |   |
|--|---|
| <ul style="list-style-type: none"> <li><b>Fossil Formation and Methods of Dating Them</b><br/>Fossil formation and methods of dating them, e.g., radiometric dating and relative dating.</li> <li><b>Key Events</b><br/>There is evidence from South Africa of certain key events in life's history:           <ul style="list-style-type: none"> <li>origins of the earliest forms of life: evidence of single-celled fossilised bacteria (stromatolites) from many parts of South Africa;</li> <li>soft-bodied animals in Namibia, Northern Cape;</li> <li>early land plants in the Grahamstown area;</li> <li>forests of primitive plants such as <i>Glossopteris</i> near Mooi River and Estcourt;</li> <li>location of coal deposits in South Africa (map only);</li> <li>the coelacanth as a 'living fossil' found on the Northern KwaZulu-Natal coast;</li> <li>mammal-like reptiles found in the Karoo (e.g. <i>Lystrosaurus</i> and <i>Thrinaxodon</i>);</li> <li>dinosaurs (in the foothills of Drakensberg and Maluti mountains), as well as cone-bearing plants;</li> <li>early mammals (Eastern Cape and Lesotho);</li> <li>humans and pre-humans (eg Gauteng, (Cradle of Humankind) Namibia, North West (Taung), Free State (Florisbad), KwaZulu-Natal (Border Cave) and, Limpopo (Makapansgat)).</li> </ul> </li> </ul> | <ul style="list-style-type: none"> <li>Examine fossils at a museum or fossil site or study photographs of fossils.</li> <li>Optional: Use plaster of Paris to construct a 'fossil'.</li> <li>Map the Key fossil sites on a map of South Africa</li> </ul> |

|            | TERM 4   |
|------------|--|
| Assessment | <p style="text-align: right;"><b>Practical examination(1 hour)</b></p> <ul style="list-style-type: none"> <li>• One formal recorded class test</li> <li>• One project/assignment</li> <li>• End-of-year examination (2 x 2½ hours)</li> </ul> <p>Assessment for learning (informal) using a variety of strategies and appropriate forms of assessment in exercises, summaries, essays, tests, etc.</p> <p>Refer to range of skills specified in Specific Aims 1 and 3.</p> <p>Note that knowledge and understanding of investigations and practical work should also be assessed in written worksheets, reports, homework exercises and tests. The cognitive skills listed under Specific Aims 1 and 3 will also apply to knowledge and understanding of investigations.</p> <p><b>Note:</b> The practical work done during the year must develop the range of skills described in Specific Aim 2. The practical examination will assess some of these skills.</p> |

### 3.2 GRADE 11: CONTENT

### TERM 1

#### **Strand 1: Diversity, Change and Continuity**

Life exists in a wide variety of forms which live in different niches. This section enables learners to be exposed to an array of life forms from microscopic plants and animals. These are organised according to a man-made system of classification based on observable features. Learners explore the roles of organisms in an ecosystem including microorganisms that are a major cause of diseases. This strand also includes some evolutionary development in plant and animal phyla.

| Time                  | Topic  | Content   | Investigations  | Resources   |
|-----------------------|--|---|---|---|
| 3 weeks<br>(12 hours) | <b>Biodiversity</b><br><b>and Classification of Microorganisms</b> | <p><b>Biodiversity</b></p> <ul style="list-style-type: none"> <li>Microorganisms: basic structure and general characteristics of the following groups (<i>links with Grade 9 and 10</i>):           <ul style="list-style-type: none"> <li>- viruses</li> <li>- bacteria</li> <li>- protista</li> <li>- fungi.</li> </ul> </li> </ul> <p>(Macroscopic organisms in the protista and fungi should only be mentioned - not studied in any detail)</p> <ul style="list-style-type: none"> <li>Mention of the roles that these groups play in maintaining balance in the environment and web of life.</li> <li>Symbiotic relationships, including, nitrogen fixing bacteria in plants and <i>E.Coli</i> in the human intestine (<i>link with Grade 10</i>).</li> <li>The effect and management of <b>one</b> disease from each of the four groups:           <ul style="list-style-type: none"> <li>- viruses (rabies, HIV/AIDS, influenza)</li> <li>- bacteria (blight, cholera, tuberculosis, anthrax)</li> <li>- protists (malaria)</li> <li>- fungi (rusts, thrush, ringworm, athlete's foot).</li> </ul> </li> <li>Immunity, including plants and animals' immune responses of against the infecting microorganism Vaccinations (briefly).</li> <li>The use of drugs, e.g., antibiotics; effect on microorganisms</li> <li>The use of microorganisms to produce medicines (e.g., insulin and antibiotics).</li> <li>Traditional technology to produce, e.g., beer, wine and cheese.</li> </ul> | <ul style="list-style-type: none"> <li>Where possible, the prevalence of bacteria/fungi should be demonstrated by growing cultures on agar plates, or bread mould (fungus) on bread.</li> </ul> | <ul style="list-style-type: none"> <li>Textbooks</li> <li>Reference books</li> <li>Charts</li> <li>Agar</li> <li>Petri dishes</li> <li>Hand lenses</li> </ul> |

## TERM 2

**Strand 2: Life Processes in Plants and Animals**

Organisms require energy to stay alive. They get this in one of two ways: by harnessing radiant energy from the sun and transforming it into chemical energy which they can use (autotrophs) or (if they cannot do this themselves), by eating other organisms (heterotrophs). The energy transformations that sustain life are include photosynthesis, (where energy is incorporated in to food), animal nutrition (where the food is processed so that it can get to the cells), and cellular respiration (how this energy is made available to organisms in order to stay alive). Gaseous exchange between an organism and its environment is necessary for photosynthesis and cellular respiration. Life processes also involve the removal of carbon dioxide and later the removal of nitrogenous wastes from the body through the kidney.

| Time                  | Topic   | Content   | Investigations   | Resources   |
|-----------------------|---|---|--|---|
| 3 weeks<br>(12 hours) | <b>Energy Transformations to Sustain Life</b> | <p><b>Photosynthesis</b></p> <ul style="list-style-type: none"> <li>process of photosynthesis using words and symbols:</li> <li>the intake of raw materials, trapping and storing of energy, formation of food in chloroplasts and its storage. The release of oxygen. Mention only of light and dark phases (<i>no biochemical details of light and dark phases are required</i>);</li> <li>importance of photosynthesis: release of oxygen, uptake of carbon dioxide from atmosphere, food production (trapping energy);</li> <li>effects of variable amounts of light, carbon dioxide and temperature on the rate of photosynthesis (<i>brief discussion together with graphs</i>).</li> <li>The role of carbon dioxide enrichment, optimum light and optimum temperatures in greenhouse systems to improve crop yields (<i>link to environmental issues discussed later</i>).</li> <li>Role of ATP as an important energy carrier in the cell.</li> </ul> | <p><b>Essential</b></p> <ul style="list-style-type: none"> <li>Investigate photosynthesis by showing that <ul style="list-style-type: none"> <li>- starch is produced during photosynthesis; and</li> <li>- light is necessary for photosynthesis.</li> </ul> </li> <li><i>The following investigations can be done (by learners) as experiments or as demonstrations:</i> <ul style="list-style-type: none"> <li>- carbon dioxide is necessary for photosynthesis;</li> <li>- chlorophyll is necessary for photosynthesis</li> <li>- oxygen is produced during photosynthesis;</li> </ul> </li> </ul> <p>or</p> <ul style="list-style-type: none"> <li>- data can be provided and interpreted by learners.</li> </ul> | <ul style="list-style-type: none"> <li>Textbooks</li> <li>Living plants</li> <li>Suitable equipment</li> <li>Chemicals</li> </ul> |

| TERM 2                |   |
|-----------------------|---|
| 3 weeks<br>(12 hours) | <p><b>Animal Nutrition (Mammals)</b></p> <ul style="list-style-type: none"> <li>The differences in dentition for herbivorous, carnivorous and omnivorous lifestyles in terms of nutritional requirements and energy relationships (<i>link with ecology - food chains</i>).</li> <li><b>Human nutrition</b></li> </ul> <p>The macro-structure of the alimentary canal and associated organs and the functions of the different parts.</p> <ul style="list-style-type: none"> <li>The Processes of ingestion, digestion, absorption, assimilation and egestion and the significance of each:</li> <li><b>Mechanical or physical digestion:</b> types and functions of different kinds of teeth, processes of chewing. Peristalsis</li> <li><b>Chemical digestion: Enzymes:</b> functions of carbohydrases, proteases and lipases: where produced; substrate, pH and end-products (Specific enzymes need not be named - <i>link to enzyme activity</i>)</li> <li><b>Absorption:</b> small intestine as a region of most absorption of digested food; adaptations to increase surface area. Structure (to tissue level) and significance of villi. Importance of hepatic portal system in the transport of absorbed food to the liver and then through hepatic vein to the rest of the body</li> <li><b>Assimilation:</b> incorporation of glucose and amino acids into cells, the role of the liver: glucose metabolism, deamination of excess amino acids, and the breakdown of alcohol, drugs and hormones.</li> <li><b>Homeostatic Control</b></li> </ul> <p>Obtain intestines of a sheep from a butcher and trace the passage that food will take.</p> <p>Cut open the stomach, portion of the small intestine and a portion of the large intestine to compare the structure of the wall in each.</p> <ul style="list-style-type: none"> <li>Textbooks</li> <li>Newspapers</li> <li>Popular magazines</li> <li>Sheep intestines obtained from a butchery.</li> <li>Scalpels or sharp knives</li> <li>Hand lenses</li> </ul>  <p>Hormonal control of blood sugar levels. Increase in the number of people affected by diabetes in recent years and brief explanation of diabetes.</p> |

**TERM 2**

|  |  |

Use a worksheet to identify the following: capsule, cortex, medulla, pyramids, blood vessels, pelvis, ureter and hilum.</p> <p>Draw and label the dissected kidney</p> | <ul style="list-style-type: none"> <li>• Sheep or pig kidney (from butchery)</li> <li>• Scalpel/blade</li> <li>• Dissecting boards</li> <li>• Scissors</li> </ul> <p>Note: A pig's kidney more closely resembles that of a human.</p> |  |

## TERM 3

**Strand 3: Environmental Studies**

Organisms interact with other organisms and with the environments in which they live. This section is structured so that learners must explore the impact of people on their environments (global, international and local). Learners are encouraged to look for and suggest solutions to local environmental problems. The intention is that learners will become more informed and more sensitive to environmental issues and will modify their behaviour to lessen their impact on the environment.

| Time                  | Topic                 | Content  | Investigations  | Resources   |

## TERM 4

**Stand 3 Environmental Studies (Continued): Human Impact on the Environment**

Note: Human Impact on the Environment must be completed in Grade 11, but this topic will be examined in **both** Grade 11 and in the National Senior Certificate at the end of Grade 12.  
In this knowledge strand, it is important to emphasise the interrelatedness and interdependence of the human impacts and the environment.

| Time                  | Topic   | Content   | Investigations   | Resources  |
|-----------------------|---|---|--|--|
| 7 weeks<br>(28 hours) | <b>Human Impact on the Environment: Current Crises for Human Survival: Problems to be Solved Within the Next Generation</b> | <p>Causes and consequences of the following (relate to conditions and circumstances in South Africa):</p> <ul style="list-style-type: none"> <li>• <b>The atmosphere and climate change</b> <ul style="list-style-type: none"> <li>- carbon dioxide emissions;</li> <li>- concept of 'carbon footprint' and the need to reduce the carbon footprint;</li> <li>- deforestation;</li> <li>- greenhouse effect and global warming; desertification, drought and floods;</li> <li>- methane emissions;</li> <li>- ozone depletion.</li> </ul> </li> <li>• <b>Water</b> <ul style="list-style-type: none"> <li>• Availability:           <ul style="list-style-type: none"> <li>- Construction of dams</li> <li>- Destruction of wetlands</li> <li>- Poor farming practices</li> <li>- Droughts and floods</li> <li>- Exotic plantations and depletion of water table</li> <li>- Boreholes and effects on aquifers</li> <li>- Wastage</li> <li>- Cost of water</li> </ul> </li> <li>• Quality:           <ul style="list-style-type: none"> <li>- Water for domestic use, industry, agriculture and mining: pollution, diseases, eutrophication and algal bloom.</li> <li>- The effect of mining on quality of water</li> <li>- Thermal pollution</li> </ul> </li> </ul> </li> </ul> | <ul style="list-style-type: none"> <li>• Practical observation of ONE example of human influence on the environment in the <b>local area</b> (e.g., the impact of alien species on biodiversity). ### 3.3 GRADE 12: CONTENT

| TERM 1  |                       |  |   |  |
|---|-----------------------|--|---|--|
| Strand 1: Life at Molecular, Cellular and Tissue Level  |                       |  |   |  |
| <p>All living organisms are made of atoms which combine to form molecules. Of these, DNA (or Deoxyribonucleic Acid) carries the genetic code for cell specialisation and cell functioning and DNA packages, as genes, determine what an organism will look like and how it will function. Plant and animal cells have a complex organisation which enables them to carry out the basic processes of life, i.e. movement, nutrition, respiration, excretion, growth, reproduction and responding to stimuli. Cells are specialised and form tissues which perform particular functions. Tissues are arranged into organs which are also specialised to carry out particular functions.</p> <p>In order to understand species, speciation, biodiversity and change, it is essential to understand how DNA and chromosomes enable continuity and change.</p> |                       |  |   |  |

## TERM 2

**Strand 1: Life at Molecular, Cellular and Tissue Level (continued); and****Strand 4: Diversity, Change and Continuity**

Life exists in a variety of life forms and it is in the study of DNA, genetics and inherited characteristics that life at molecular level intersects with Strand 4: Diversity, Change and Continuity. In order to understand species, speciation, biodiversity and change, it is essential to understand how DNA and chromosomes enable continuity and change

| Time                          | Topic                           | Content  | Investigations  | Resources  |

Identify the variables and recommend ways to control the variables. Record and interpret the results.</li> <li>If available, a klinostat should be used</li> <li>Seedlings</li> </ul> |
| <b>Strand 4: Diversity, Change and Continuity (continued):</b><br>It is necessary to have a firm grasp on the work done earlier in the year on DNA, genetics and heredity in order to understand the concept of change, natural selection and evolution. This knowledge strand is expanded on by exploring the mechanisms of evolution and specifically human evolution in Africa. . |  |  |   |
| Time   | Topic  | Content  | Investigations  |
| 2 weeks<br>(8 hours)   | Evolution<br>by Natural<br>Selection           | <ul style="list-style-type: none"> <li><b>Origin of ideas about origins</b></li> <li>Different kinds of evidence: fossil record (<a href="#">link to Grade 10</a>), modification by descent, biogeography (<a href="#">link to Grade 10</a>), genetics (<a href="#">Grade 12</a>) and other forms of evidence: <ul style="list-style-type: none"> <li>- difference between hypothesis and theory; and</li> <li>- brief overview of history of different theories of development: Lamarckism, Darwinism, and Punctuated Equilibrium.</li> </ul> </li> <li><b>Artificial selection:</b> ONE example of a domesticated animal and ONE example of a crop species.</li> <li><b>Darwin's theory of evolution by natural selection</b></li> <li>Evolution (change) through <b>natural selection</b> (<a href="#">link to Genetics</a>): depends on variation/gene pool of inherited characteristics, and the production of more offspring than is required. Changes in the environment. Pressure leads to extinction or successful adaption. Continuous and discontinuous variation.</li> </ul> | <ul style="list-style-type: none"> <li>Class debate and discussion.</li> <li>Demonstrate natural selection through games, e.g., camouflage</li> <li>Research one example of artificial selection. Present findings in a report</li> </ul>   |

## TERM 3

- Formation/emergence of new species Speciation; biological species concept. Interbreeding produces viable offspring in a species.  
ONE example of speciation due to geographic isolation (Galapagos finches, Galapagos tortoises, mammals or plants on different landmasses, e.g., baobabs in Africa and Madagascar, proteas in South Africa and Australia).

- Mechanisms for reproductive isolation:**

Introduction to some examples:

- breeding at different times of the year;
- species-specific courtship behaviour;
- adaptation to different pollinators (plants);
- prevention of fertilisation;
- infertile offspring in cross-species hybrids.

- Evolution in present times** Examples of

natural selection and evolution, e.g., resistance to insecticides in insects, bill and body size of Galapagos finches, resistance to antibiotics in various bacteria (TB), HIV resistance to anti-retrovirals.

|                                 |                 | TERM 3  |  |

**Assessment: 2 x 2½ hour exams: Paper 1 and Paper 2 (topics specified)**

## SECTION 4

### ASSESSMENT

#### 4.1 Introduction

Assessment is a continuous planned process of identifying, gathering and interpreting information on learners' performance, using various forms of assessment. It involves four steps: generating and collecting evidence of achievement; evaluating this evidence, recording the findings and using this information to understand and thereby assist the learners' development in order to improve the process of learning and teaching.

Assessment should be both informal (Assessment for Learning) and formal (Assessment of Learning). In both cases, regular feedback should be provided to learners to enhance their learning experience.

Assessment is a process that measures individual learners' attainment of knowledge (content, concepts and skills) in a subject by collecting, analysing and interpreting the data and information obtained from this process to:

- enable the teacher to make reliable judgements about a learner's progress;
- inform learners about their strengths, weaknesses and progress; and
- assist teachers, parents and other stakeholders in making decisions about the learning process and the progress of the learners.

Assessment should be mapped against the content and intended aims specified for Life Sciences and in informal and formal assessments it is important to ensure that in the course of the year:

- all of the subject content is covered;
- the full range of skills is included; and
- different forms of assessment are used.

#### 4.2 Informal Assessment or Daily Assessment

Assessment **for** learning has the purpose of continuously collecting information on learners' achievement that can be used to improve their learning.

Informal assessment is daily monitoring of learners' progress. This is done through observations, discussions, practical demonstrations, learner-teacher conferences, informal classroom interactions, etc. Informal assessment may be as simple as stopping during the lesson to observe learners or to discuss how their learning is progressing. Informal assessment should be used to provide feedback to the learners and to inform planning for teaching, but it need not be recorded. It should not be seen as separate from learning activities taking place in the classroom. Learners or teachers can mark these assessment tasks.

Self-assessment and peer assessment actively involve the learners being assessed. This is important as it allows learners to learn from and reflect on their own performance. The results of the informal daily assessment tasks are not formally recorded unless the teacher wishes to do so. The results of daily assessment tasks are not taken into account for promotion or certification purposes.

Informal, ongoing assessments should be used to structure the acquisition of knowledge and skills and should be a precursor to formal tasks in the Programme of Assessment.

#### 4.3 Formal Assessment

| Grades    | Formal school-based assessments               | End-of-year examinations  |
|-----------|---|---------------------------|
| R - 3     | 100%  | n/a                       |
| 4 - 6     | 75%   | 25%                       |
| 7 - 9     | 40%   | 60%                       |
| 10 and 11 | 25% including a mid-year examination          | 75%                       |
| 12        | 25% including mid-year and trial examinations | External examination: 75% |

All assessment tasks that make up a formal programme of assessment for the year are regarded as formal assessment. Formal assessment tasks are marked and formally recorded by the teacher for progression and certification purposes. All formal assessment tasks are subject to moderation to ensure that appropriate standards are maintained.

Formal assessment provides teachers with a systematic way of evaluating how well learners are progressing in a grade and in a particular subject. Examples of formal assessments include tests, examinations, practical tasks, projects, oral presentations, demonstrations and performances. Formal assessment tasks form part of a year-long formal Programme of Assessment in each grade and subject.

The cognitive demands in assessment should be **appropriate for the age and developmental level** of the learners in the grade. Assessment in Life Sciences must cater for a range of cognitive levels and abilities of learners. The assessment tasks should be carefully designed to cover the content of the subject as well as the range of skills and the cognitive levels that have been identified in the specific aims. The design of assessments should therefore ensure that a full range of content and skills are assessed within each Grade in the Phase. The specific aims, topics, content and range of skills in the subject should be used to inform the planning and development of assessments.

#### Weighting of Cognitive Demands for the Assessment of content in Grades 10, 11 and 12

|                                 | Knowing Science   | Understanding Science  | Applying scientific knowledge  | Evaluating, analysing and synthesising scientific knowledge   |
|---------------------------------|---|--|--|---|
| %                               | 40%   | 25%  | 20%  | 15%   |
| <b>Examples of Useful Verbs</b> | <ul style="list-style-type: none"> <li>• State</li> <li>• Name</li> <li>• Label</li> <li>• List</li> <li>• Define</li> <li>• Describe and others</li> </ul> | <ul style="list-style-type: none"> <li>• Explain</li> <li>• Compare</li> <li>• Rearrange</li> <li>• Give an example of</li> <li>• Illustrate</li> <li>• Calculate</li> <li>• Make a generalisation and others</li> </ul> | <ul style="list-style-type: none"> <li>• Predict</li> <li>• Apply</li> <li>• Use knowledge</li> <li>• Demonstrate</li> <li>• Solve</li> <li>• Implement</li> <li>• Judge and others</li> </ul> | <ul style="list-style-type: none"> <li>• Select</li> <li>• Differentiate</li> <li>• Analyse</li> <li>• Infer</li> <li>• Suggest a reason</li> <li>• Discuss</li> <li>• Categorise and others</li> </ul> |

**Note:** A single, formal class test per term will not necessarily provide the most accurate and reliable evidence of every learner's performance. As far as possible, teachers should try to let learners write more than one test per term in order to get a better picture of their abilities. One formal class test per term is the minimum number that must be recorded.

The requirements (number and nature of tasks) for Life Sciences are indicated below:

#### 4.4 Assessment Requirements for Life Sciences:

##### 4.4.1 Grade 10

The programme of assessment is designed to spread formal assessment tasks in all subjects in a school throughout a term.

#### GRADE 10

##### PROGRAMME OF FORMAL ASSESSMENT

| FORMAL, RECORDED, SCHOOL-BASED ASSESSMENTS   |   | END-OF-YEAR INTERNAL EXAMINATION 75%   |  |

|   |  |  | <b>75%</b>   |

\*This is an example of a project/assignment.

The requirements (number and nature of tasks) for Life Sciences are indicated below:

#### 4.4.3 Grade 12

##### PROGRAMME OF FORMAL ASSESSMENT

| FORMAL, RECORDED, SCHOOL-BASED ASSESSMENTS   |   | TRIAL: END-OF-YEAR INTERNAL EXAMINATION<br>50%   |
|--|---|--|
| Content  | Practical   | Two written examinations<br>(2½ hours + 2½ hours)  |
| <ul style="list-style-type: none"> <li>Four tests (minimum of 50 marks each)</li> <li>*One mid-year examination (2½ hours, 150 marks) or control test</li> <li>One trial examination (2 x 2½ hours, 300 marks)</li> <li>One project/assignment (can be done in any term: 100 marks in term 3).</li> <li>Skills are listed under Specific Aims 1 and 3</li> </ul> | <p>A selection of three representative practical tasks, which <b>cover the range of skills</b>, must be marked and recorded. (The marks allocated for a practical task should range from 20 to 40). The range of skills is described in Specific Aim 2.</p> | <p>These exams test knowledge of content, concepts and skills across all topics. Knowledge of practical work as well as some of the skills related to practical work must be assessed in the written examination</p> |
| School-based assessment (during the year)  |   |  |
| Term 1   | Term 2  | Term 3 and Term 4  |
| <ul style="list-style-type: none"> <li>One test</li> <li>One selected practical task</li> </ul>  | <ul style="list-style-type: none"> <li>One test</li> <li>One selected practical task</li> <li>* Mid-year examination or control test</li> </ul>   | <ul style="list-style-type: none"> <li>One test</li> <li>One selected practical task (will not be included in year mark)</li> <li>project/assignment</li> <li>* Environmental studies: fieldwork</li> </ul>          |
| 33%  | 33%   | 33%  |
| Convert to 50%   |   | 50%  |

\* **Note:** Schools that are performing well (above an 80% pass rate in the previous year) **may** elect not to write the mid-year examination.

**Note:** The year mark will be converted to 25% and the **external** examination will count 75% of the final mark.

## 4.5 THE END-OF-YEAR EXAMINATIONS:

### 4.5.1 Grade 10

The examination will consist of two examination papers of 2½ hours and 150 marks each.

The weighting and assessment of topics in Paper 1 and Paper 2 will be as follows:

#### Paper 1

| Topic                                   | Time   | Weighting |       |
|---|--|-----------|-------|
|   |  | %         | Marks |
| <b>T1:</b>                              |  |           |       |
| • Chemistry of Life                     | 2½ weeks   | 16        | 23    |
| • Cells: Basic Units of Life            | 3 weeks  | 17        | 25    |
| • Cell Division: Mitosis                | 2 weeks  | 12        | 18    |
| • Plant and Animal Tissues              | 1 week   | 5 (50)    | 9     |
| <b>T2:</b>                              |  |           |       |
| • Plant and Animal Tissues              | 2 weeks  | 13        | 20    |
| • Plant Organs (Leaf)                   | ½ week   | 3         | 5     |
| • Support and Transport Systems: Plants | 3 weeks  | 17        | 25    |
| • Support Systems: Animals              | 3 weeks  | 17 (50)   | 25    |
| <b>Totals</b>                           |  17 weeks | 100%      | 150   |

#### Paper 2

| Topic                             | Time     | Weighting |       |
|-----------------------------------|----------|-----------|-------|
|                                   |          | %         | Marks |
| <b>T3:</b>                        |          |           |       |
| • Transport Systems in mammals    | 3 weeks  | 20        | 30    |
| • Biosphere to Ecosystems         | 6 weeks  | 40 (60)   | 60    |
| <b>T 4:</b>                       |          |           |       |
| • Biodiversity and Classification | 1 week   | 7         | 10    |
| • History of Life and Earth       | 5 weeks  | 33 (40)   | 50    |
| <b>Totals</b>                     | 15 weeks | 100%      | 150   |

The weighting per topic must serve as a guideline for teachers; slight deviations in respect of the number of marks allocated to a topic are acceptable. The purpose of providing the weighting is to ensure that all topics are covered according to approximately the correct weighting.

**4.5.2 Grade 11**

The examination will consist of two examination papers of 2½ hours and 150 marks each. The weighting and assessment of topics in Paper 1 and Paper 2 will be as follows:

**Paper 1**

| Topic  | Time             | Weighting   |            |
|--|------------------|-------------|------------|
|  |                  | %           | Marks      |
| <b>T2</b>  |                  |             |            |
| • Energy transformations to sustain Life: Photosynthesis | 3 weeks          | 18          | 27         |
| • Animal Nutrition                                       | 3 weeks          | 18          | 27         |
| • Energy transformation: Respiration                     | 1½ weeks         | 10          | 15         |
| <b>T3</b>  |                  |             |            |
| • Gas exchange   | 2½ weeks         | 15          | 22         |
| • Excretion in humans                                    | 2½ weeks         | 15          | 23         |
| • Population Ecology                                     | 4 weeks          | 24          | 36         |
| <b>Totals</b>  | <b>16½ weeks</b> | <b>100%</b> | <b>150</b> |

**Paper 2**

| Topic  | Time            | Weighting   |            |
|--|-----------------|-------------|------------|
|  |                 | %           | Marks      |
| <b>T 1</b>   |                 |             |            |
| • Biodiversity and classification of micro-organisms   | 3 weeks         | 20          | 30         |
| • Biodiversity in plants and reproduction              | 3 weeks         | 20          | 30         |
| • Biodiversity of animals                              | 2 weeks         | 13          | 20         |
| <b>T4</b>  |                 |             |            |
| • Human impact on the environment:<br>• current crises | 7 weeks         | 47          | 70         |
| <b>Totals</b>  | <b>15 weeks</b> | <b>100%</b> | <b>150</b> |

The weighting per topic must serve as a guideline for teachers; slight deviations in respect of the number of marks allocated to a topic are acceptable. The purpose of providing the weighting is to ensure that all topics are covered in approximately the correct weighting.

#### 4.5.3 Grade 12

The examination will consist of two examination papers of 2½ hours and 150 marks each. The weighting and assessment of topics in Paper 1 and Paper 2 will be as follows:

##### Paper 1

| Topic                                    | Time             | Weighting   |            |
|--|------------------|-------------|------------|
|  |                  | %           | Marks      |
| <b>T 1</b>                               |                  |             |            |
| • Meiosis                                | 1 week           | 7           | 11         |
| • Reproduction in Vertebrates            | ½ week           | 4           | 6          |
| • Human Reproduction                     | 3 weeks          | 21          | 31         |
| <b>T 2</b>                               |                  |             |            |
| • Responding to the environment (humans) | 4 weeks          | 27          | 40         |
| <b>T 3</b>                               |                  |             |            |
| • Human endocrine system                 | 1½ weeks         | 10          | 15         |
| • Homeostasis in humans                  | 1 week           | 7           | 11         |
| • Responding to the Environment (plants) | 1 week           | 7           | 11         |
| <b>T 4</b>                               |                  |             |            |
| • Human impact (Grade 11)                | '2½ weeks'       | 17          | 25         |
| <b>Totals</b>                            | <b>14½ weeks</b> | <b>100%</b> | <b>150</b> |

##### Paper 2

| Topic                                 | Time             | Weighting   |            |
|---------------------------------------|------------------|-------------|------------|
|                                       |                  | %           | Marks      |
| <b>T 1</b>                            |                  |             |            |
| • DNA: Code of Life                   | 2½ weeks         | 19          | 27         |
| • Meiosis                             | 1 week           | 7           | 12         |
| <b>T 2</b>                            |                  |             |            |
| • Genetics and Inheritance            | 4 weeks          | 30          | 45         |
| <b>T 3</b>                            |                  |             |            |
| • Evolution through Natural Selection | 2 weeks          | 15          | 23         |
| <b>T 3/T4</b>                         |                  |             |            |
| • Human evolution                     | 4 weeks          | 29          | 43         |
| <b>Totals</b>                         | <b>13½ weeks</b> | <b>100%</b> | <b>150</b> |

The weighting per topic must serve only as a guideline to teachers and examiners and is included to ensure that all topics are adequately covered in examinations. The number of marks per topic is not expected to be exactly according to this weighting in the examination papers.

## 4.6 RECORDING AND REPORTING

Recording is a process in which the teacher documents the level of a learner's performance in a specific assessment task. It indicates learner progress towards the achievement of knowledge as prescribed in the Curriculum and Assessment Policy Statement. Records of learner performance should provide evidence of the learner's conceptual progression within a grade and her or his readiness to progress or be promoted to the next grade. Records of learner performance should also be used to verify the progress made by teachers and learners during the teaching and learning process.

Reporting is a process of communicating learner performance to learners, parents, schools, and other stakeholders. Learner performance can be reported in a number of ways. These include report cards, parents' meetings, school visitation days, parent-teacher conferences, phone calls, letters, class or school newsletters, etc. For all grades, teachers report learners' achievements in percentages next to the appropriate subject. The various achievement levels and their corresponding percentage bands are as shown in the table below.

Note: The seven-point scale should have clear descriptions that give detailed information for each level. Teachers will record actual marks against the task by using a record sheet; and report percentages against the subject on the learners' report cards.

### Codes and Percentages for Reporting in Grades R-12

| Rating code | Description of competence | Percentage |
|-------------|---------------------------|------------|
| 7           | Outstanding achievement   | 80- 100    |
| 6           | Meritorious achievement   | 70 - 79    |
| 5           | Substantial achievement   | 60 - 69    |
| 4           | Adequate achievement      | 50 - 59    |
| 3           | Moderate achievement      | 40 - 49    |
| 2           | Elementary achievement    | 30 - 39    |
| 1           | Not achieved              | 0 - 29     |

Schools are required to provide quarterly feedback to parents on the Programme of Assessment using a formal reporting tool such as a report card. The schedule and the report card should indicate the overall level of a learners' performance.

## 4.7 MODERATION OF ASSESSMENT

Moderation refers to the process that ensures that the assessment tasks are fair, valid and reliable. Moderation should be implemented at school and district level and if necessary also at provincial level. Comprehensive and appropriate moderation practices must be in place for the quality assurance of all subject assessments.

### 4.7.1 Grades 10 and 11

In Grades 10 and 11 Formal School-based Assessment and the Practical Assessment Tasks should be moderated by the relevant subject specialists at district and, if necessary, provincial levels in consultation with the moderators at the school. Moderation serves five purposes:

- Firstly, it should ascertain whether the subject-specific content and skills are sufficiently covered.
- Secondly, the moderator must ensure that the various levels of cognitive demand are reflected in the assessments.
- Thirdly, that the assessments and marking are of an acceptable standard and consistency.
- Fourthly, to ensure that assessment in different schools are more or less comparable whilst recognising that different teachers have different standards.
- Finally, to identify areas in which the teacher may need further support and development and to provide such necessary support

In Grades 10 and 11 there is no compulsory national moderation. Moderation is therefore an ongoing process and not a once-off end-of-year event.

#### 4.7.2 Grade 12

Moderation refers to the process which ensures that the assessment tasks are fair, valid and reliable. Moderation should be implemented at school, district, provincial and national levels. Comprehensive and appropriate moderation practices must be in place for the quality assurance of all subject assessments.

##### 4.7.2.1 Formal Assessment (School-based Assessment - SBA)

In Grade 12, moderation must take place at four levels:

- *School-based moderation and verification of learner performance*

This is intended to ensure that the assessments meet the requirements in terms of content, cognitive demands and skills; that the marking has been consistent and fair and that the marks are a true reflection of learners' performance in the assessments. This will enable the school to easily identify problems related to the pacing, standard and reliability of assessment and to ensure that appropriate interventions are put in place early. This is an ongoing process.

- *Moderation by the subject advisor*

This is also an ongoing process. Subject advisors should moderate assessments, to ascertain whether:

- Subject-specific content and skills have been covered adequately;
- The prescribed number of assessments have been complied with;
- the appropriate cognitive demands are reflected in the assessments;
- the marking is of an acceptable standard and is consistent;
- the assessments in different schools are comparable whilst recognising that different teachers teach and assess differently.

Subject advisors should provide teachers with the necessary guidance and support should any shortcomings be identified. Early identification of shortcomings and early interventions are essential. It is therefore necessary that moderation at this level should be ongoing and not a once-off end-of-year event.

- *Moderation by the province*

Moderation of SBA at this level is once-off and is related to the quality assurance processes that are necessary developed jointly by the Department of Basic Education and Umalusi in terms of National Policy.

- *At a national level*

Statistical moderation of learner performance in the School Based Assessment is necessary to ensure comparability across schools, districts, and provinces.

Note that, in Grade 12, the assessment of Practical work is incorporated into the SBA (per term) and that there is no practical examination. This is because schools are not all equally resourced and some learners may be disadvantaged because of this.

#### 4.8 GENERAL

This document should be read in conjunction with:

**4.8.1** *National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R-12; and*

**4.8.2** *The policy document, National Protocol for Assessment Grades R-12.*
