Two groups of grade 12 learners were given separate experiments to conduct using a strong base (sodium hydroxide) and weak acids (oxalic acid and ethanoic acid) respectively.

GROUP 1

Learners were asked to determine the percentage purity of a sample of oxalic acid ($\text{H}_2\text{C}_2\text{O}_4$). To do this, they followed the procedure below:

- (II) Prepared a solution of oxalic acid by dissolving $0,25 \text{ g}$ of the IMPURE SAMPLE in 75 cm^3 of water.
- (III) Titrated the oxalic acid solution against the standard NaOH solution. The titration required $40,02 \text{ cm}^3$ of the NaOH solution to neutralize ALL the oxalic acid solution in STEP II above.

The equation for the reaction is:

- 9.1 Define a *standard solution*? (2)
- 9.2 Calculate the concentration of the standard NaOH solution. (3)
- 9.3 Calculate the percentage purity of the oxalic acid sample. (7)

GROUP 2

- (I) Diluted a vinegar sample by placing 25cm³ household vinegar in a 250 cm³ volumetric flask and adding water up to the 250 cm³ mark.
- (II) Titrated the diluted vinegar sample with a solution of NaOH of concentration 0,2 mol.dm⁻³.

9.4 Calculate the pH of the NaOH solution. (4)

In the titration, 15 cm³ of the diluted vinegar sample needed 30,25 cm³ of the sodium hydroxide solution for the endpoint to be reached.

9.5 Define *end point*. (2)

9.6 Calculate the concentration of dilute vinegar solution (in ethanoic acid). (4)

9.7 If 1cm³ vinegar has a mass of 1g, calculate the percentage ethanoic acid by mass, present in the vinegar. (5)

9.8.2 How will the pH of the water be affected by the hydrolysis reaction?
(Choose from INCREASES, DECREASES or REMAINS THE SAME)
Write a balanced equation that will explain the answer. (3)

QUESTION 3

3.1 Temperature at which the vapour pressure of a substance is equal to the atmospheric pressure. ✓ ✓ (2)

3.2 How does the type of functional group affect the boiling point of an organic compound? (2)

OR

What is the relationship between the functional groups of different organic compounds and their boiling points?

Dependent and independent variable correctly identified i.e. boiling point and functional group	✓
Relationship between dependent and independent variables given in the form of a question that cannot be answered by YES or NO.	✓

3.3 Molecular mass ✓ (1)

3.4 Compound A has London/induced dipole forces ✓
 whereas compound B has London forces and hydrogen bonds. ✓
 Hydrogen bonds are stronger than London forces. ✓ (4)
 Therefore more energy is required to overcome the intermolecular forces in compound B. ✓

3.5 Higher than. ✓
 (-) The lower the boiling point, the higher the vapour pressure. ✓ (2)

3.6 Lower than. ✓
 (-) Compound C has only one site for hydrogen bonding while compound B has two sites for hydrogen bonding. ✓ therefore more energy required to separate molecules of B ✓ (3)
