## DISCLAIMER

In view of the stringent time requirements encountered by the Department of Basic Education to effect the necessary editorial changes and layout to the Curriculum and Assessment Policy Statements and the supplementary policy documents, possible errors may occur in the said documents placed on the official departmental websites.

There may also be vernacular inconsistencies in the language documents at Home-, First and Second Additional Language levels which have been translated in the various African Languages. Please note that the content of the documents translated and versioned in the African Languages are correct as they are based on the English generic language documents at all three language levels to be implemented in all four school phases.

If any editorial, layout or vernacular inconsistencies are detected, the user is kindly requested to bring this to the attention of the Department of Basic Education.

## FOREWORD BY THE MINISTER

Our national curriculum is the culmination of our efforts over a period of seventeen years to transform the curriculum bequeathed to us by apartheid. From the start of democracy we have built our curriculum on the values that inspired our Constitution (Act 108 of 1996). The Preamble to the Constitution states that the aims of the Constitution are to:

- heal the divisions of the past and establish a society based on democratic values, social justice and fundamental human rights;
- improve the quality of life of all citizens and free the potential of each person;
- lay the foundations for a democratic and open society in which government is based on the will of the people and every citizen is equally protected by law; and
- build a united and democratic South Africa able to take its rightful place as a sovereign state in the family of nations.

Education and the curriculum have an important role to play in realising these aims.

In 1997 we introduced outcomes-based education to overcome the curricular divisions of the past, but the experience of implementation prompted a review in 2000. This led to the first curriculum revision: the *Revised National Curriculum Statement Grades R-9* and the *National Curriculum Statement Grades 10-12* (2002).

Ongoing implementation challenges resulted in another review in 2009 and we revised the *Revised National Curriculum Statement* (2002) and the *National Curriculum Statement Grades 10-12* to produce this document.

From 2012 the two National Curriculum Statements, for *Grades R-9* and *Grades 10-12* respectively, are combined in a single document and will simply be known as the *National Curriculum Statement Grades R-12*. The *National Curriculum Statement for Grades R-12* builds on the previous curriculum but also updates it and aims to provide clearer specification of what is to be taught and learnt on a term-by-term basis.

The *National Curriculum Statement Grades R-12* represents a policy statement for learning and teaching in South African schools and comprises of the following:

- (a) Curriculum and Assessment Policy Statements (CAPS) for all approved subjects listed in this document;
- (b) *National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R-12*; and
- (c) *National Protocol for Assessment Grades R-12*.

A handwritten signature in black ink, appearing to read "Motshekga".

**MRS ANGIE MOTSHEKGA, MP**  
**MINISTER OF BASIC EDUCATION**

## SECTION 1: INTRODUCTION AND BACKGROUND

### 1.1 BACKGROUND

The *National Curriculum Statement Grades R-12 (NCS)* stipulates policy on curriculum and assessment in the schooling sector.

To improve implementation, the National Curriculum Statement was amended, with the amendments coming into effect in January 2012. A single comprehensive Curriculum and Assessment Policy document was developed for each subject to replace Subject Statements, Learning Programme Guidelines and Subject Assessment Guidelines in Grades R-12.

### 1.2 OVERVIEW

- (a) The *National Curriculum Statement Grades R-12 (January 2012)* represents a policy statement for learning and teaching in South African schools and comprises the following:
  - (i) *Curriculum and Assessment Policy Statements for each approved school subject;*
  - (ii) *The policy document, National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R-12; and*
  - (iii) *The policy document, National Protocol for Assessment Grades R-12 (January 2012).*
- (b) The *National Curriculum Statement Grades R-12 (January 2012)* replaces the two current national curricula statements, namely the
  - (i) *Revised National Curriculum Statement Grades R-9, Government Gazette No. 23406 of 31 May 2002, and*
  - (ii) *National Curriculum Statement Grades 10-12 Government Gazettes, No. 25545 of 6 October 2003 and No. 27594 of 17 May 2005.*
- (c) The national curriculum statements contemplated in subparagraphs b(i) and (ii) comprise the following policy documents which will be incrementally repealed by the *National Curriculum Statement Grades R-12 (January 2012)* during the period 2012-2014:
  - (i) *The Learning Area/Subject Statements, Learning Programme Guidelines and Subject Assessment Guidelines for Grades R-9 and Grades 10-12;*
  - (ii) *The policy document, National Policy on assessment and qualifications for schools in the General Education and Training Band, promulgated in Government Notice No. 124 in Government Gazette No. 29626 of 12 February 2007;*
  - (iii) *The policy document, the National Senior Certificate: A qualification at Level 4 on the National Qualifications Framework (NQF), promulgated in Government Gazette No. 27819 of 20 July 2005;*

- (iv) *The policy document, An addendum to the policy document, the National Senior Certificate: A qualification at Level 4 on the National Qualifications Framework (NQF), regarding learners with special needs, published in Government Gazette, No.29466 of 11 December 2006, is incorporated in the policy document, National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R-12; and*
- (v) *The policy document, An addendum to the policy document, the National Senior Certificate: A qualification at Level 4 on the National Qualifications Framework (NQF), regarding the National Protocol for Assessment (Grades R-12), promulgated in Government Notice No.1267 in Government Gazette No. 29467 of 11 December 2006.*
- (d) The policy document, *National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R-12*, and the sections on the Curriculum and Assessment Policy as contemplated in Chapters 2, 3 and 4 of this document constitute the norms and standards of the *National Curriculum Statement Grades R-12*. It will therefore, in terms of *section 6A* of the *South African Schools Act, 1996* (*Act No. 84 of 1996*.) form the basis for the Minister of Basic Education to determine minimum outcomes and standards, as well as the processes and procedures for the assessment of learner achievement to be applicable to public and independent schools.

## 1.3 GENERAL AIMS OF THE SOUTH AFRICAN CURRICULUM

- (a) The *National Curriculum Statement Grades R-12* gives expression to the knowledge, skills and values worth learning in South African schools. This curriculum aims to ensure that children acquire and apply knowledge and skills in ways that are meaningful to their own lives. In this regard, the curriculum promotes knowledge in local contexts, while being sensitive to global imperatives.
- (b) The National Curriculum Statement Grades R-12 serves the purposes of:
- equipping learners, irrespective of their socio-economic background, race, gender, physical ability or intellectual ability, with the knowledge, skills and values necessary for self-fulfilment, and meaningful participation in society as citizens of a free country;
  - providing access to higher education;
  - facilitating the transition of learners from education institutions to the workplace; and
  - providing employers with a sufficient profile of a learner's competences.
- (c) The National Curriculum Statement Grades R-12 is based on the following principles:
- Social transformation: ensuring that the educational imbalances of the past are redressed, and that equal educational opportunities are provided for all sections of the population;
  - Active and critical learning: encouraging an active and critical approach to learning, rather than rote and uncritical learning of given truths;
  - High knowledge and high skills: the minimum standards of knowledge and skills to be achieved at each grade are specified and set high, achievable standards in all subjects;
  - Progression: content and context of each grade shows progression from simple to complex;

- Human rights, inclusivity, environmental and social justice: infusing the principles and practices of social and environmental justice and human rights as defined in the Constitution of the Republic of South Africa. The National Curriculum Statement Grades R-12 is sensitive to issues of diversity such as poverty, inequality, race, gender, language, age, disability and other factors;
- Valuing indigenous knowledge systems: acknowledging the rich history and heritage of this country as important contributors to nurturing the values contained in the Constitution; and
- Credibility, quality and efficiency: providing an education that is comparable in quality, breadth and depth to those of other countries.

(d) The National Curriculum Statement Grades R-12 aims to produce learners that are able to:

- identify and solve problems and make decisions using critical and creative thinking;
- work effectively as individuals and with others as members of a team;
- organise and manage themselves and their activities responsibly and effectively;
- collect, analyse, organise and critically evaluate information;
- communicate effectively using visual, symbolic and/or language skills in various modes;
- use science and technology effectively and critically showing responsibility towards the environment and the health of others; and
- demonstrate an understanding of the world as a set of related systems by recognising that problem solving contexts do not exist in isolation.

(e) Inclusivity should become a central part of the organisation, planning and teaching at each school. This can only happen if all teachers have a sound understanding of how to recognise and address barriers to learning, and how to plan for diversity.

The key to managing inclusivity is ensuring that barriers are identified and addressed by all the relevant support structures within the school community, including teachers, District-Based Support Teams, Institutional-Level Support Teams, parents and Special Schools as Resource Centres. To address barriers in the classroom, teachers should use various curriculum differentiation strategies such as those included in the Department of Basic Education's *Guidelines for Inclusive Teaching and Learning* (2010).

## 1.4 TIME ALLOCATION

### 1.4.1 Foundation Phase

- (a) The instructional time in the Foundation Phase is as follows:

SUBJECT	GRADE R (HOURS)	GRADES 1-2 (HOURS)	GRADE 3 (HOURS)
Home Language	10	8/7	8/7
First Additional Language		2/3	3/4
Mathematics	7	7	7
Life Skills	<b>6</b>	<b>6</b>	<b>7</b>
• Beginning Knowledge	(1)	(1)	(2)
• Creative Arts	(2)	(2)	(2)
• Physical Education	(2)	(2)	(2)
• Personal and Social Well-being	(1)	(1)	(1)
<b>TOTAL</b>	<b>23</b>	<b>23</b>	<b>25</b>

- (b) Instructional time for Grades R, 1 and 2 is 23 hours and for Grade 3 is 25 hours.
- (c) Ten hours are allocated for languages in Grades R-2 and 11 hours in Grade 3. A maximum of 8 hours and a minimum of 7 hours are allocated for Home Language and a minimum of 2 hours and a maximum of 3 hours for Additional Language in Grades 1-2. In Grade 3 a maximum of 8 hours and a minimum of 7 hours are allocated for Home Language and a minimum of 3 hours and a maximum of 4 hours for First Additional Language.
- (d) In Life Skills Beginning Knowledge is allocated 1 hour in Grades R – 2 and 2 hours as indicated by the hours in brackets for Grade 3.

### 1.4.2 Intermediate Phase

- (a) The instructional time in the Intermediate Phase is as follows:

SUBJECT	HOURS
Home Language	6
First Additional Language	5
Mathematics	6
Natural Sciences and Technology	3,5
Social Sciences	<b>3</b>
Life Skills	4
• Creative Arts	(1,5)
• Physical Education	(1)
• Personal and Social Well-being	(1,5)
<b>TOTAL</b>	<b>27,5</b>

#### 1.4.3 Senior Phase

- (a) The instructional time in the Senior Phase is as follows:

SUBJECT	HOURS
Home Language	5
First Additional Language	4
Mathematics	4,5
Natural Sciences	3
Social Sciences	3
Technology	2
Economic Management Sciences	2
Life Orientation	2
Creative Arts	2
<b>TOTAL</b>	<b>27,5</b>

#### 1.4.4 Grades 10-12

- (a) The instructional time in Grades 10-12 is as follows:

SUBJECT	TIME ALLOCATION PER WEEK (HOURS)
Home Language	4.5
First Additional Language	4.5
Mathematics	4.5
Life Orientation	2
A minimum of any three subjects selected from <b>Group B Annexure B</b> , Tables B1-B8 of the policy document, <i>National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R-12</i> , subject to the provisos stipulated in paragraph 28 of the said policy document.	12 (3x4h)
<b>TOTAL</b>	<b>27,5</b>

The allocated time per week may be utilised only for the minimum required NCS subjects as specified above, and may not be used for any additional subjects added to the list of minimum subjects. Should a learner wish to offer additional subjects, additional time must be allocated for the offering of these subjects.

## SECTION 2: DEFINITION, AIMS, SKILLS AND CONTENT

### 2.1 INTRODUCTION

In Section 2, the Senior Phase Mathematics Curriculum and Assessment Policy Statement (CAPS) provides teachers with a definition of mathematics, specific aims, specific skills, focus of content areas, weighting of content areas and content specification.

### 2.2 WHAT IS MATHEMATICS?

Mathematics is a language that makes use of symbols and notations to describe numerical, geometric and graphical relationships. It is a human activity that involves observing, representing and investigating patterns and quantitative relationships in physical and social phenomena and between mathematical objects themselves. It helps to develop mental processes that enhance logical and critical thinking, accuracy and problem-solving that will contribute in decision-making.

### 2.3 SPECIFIC AIMS

The teaching and learning of Mathematics aims to develop

- a critical awareness of how mathematical relationships are used in social, environmental, cultural and economic relations
- confidence and competence to deal with any mathematical situation without being hindered by a fear of Mathematics
- an appreciation for the beauty and elegance of Mathematics
- a spirit of curiosity and a love for Mathematics
- recognition that Mathematics is a creative part of human activity
- deep conceptual understandings in order to make sense of Mathematics
- acquisition of specific knowledge and skills necessary for:
  - the application of Mathematics to physical, social and mathematical problems
  - the study of related subject matter (e.g. other subjects)
  - further study in Mathematics.

### 2.4 SPECIFIC SKILLS

To develop essential mathematical skills the learner should

- develop the correct use of the language of Mathematics
- develop number vocabulary, number concept and calculation and application skills

- learn to listen, communicate, think, reason logically and apply the mathematical knowledge gained
- learn to investigate, analyse, represent and interpret information
- learn to pose and solve problems
- build an awareness of the important role that Mathematics plays in real life situations including the personal development of the learner.

## 2.5 FOCUS OF CONTENT AREAS

Mathematics in the Senior Phase covers five main Content Areas.

- Numbers, Operations and Relationships;
- Patterns, Functions and Algebra;
- Space and Shape (Geometry);
- Measurement; and
- Data Handling.

Each content area contributes towards the acquisition of specific skills. The table below shows the general focus of the content areas as well as the specific focus of the content areas for the Senior Phase.

MATHEMATICS CONTENT KNOWLEDGE		
Content area	General content focus	Senior Phase specific content focus
<b>Numbers, Operations and Relationships</b>	<p>Development of number sense that includes:</p> <ul style="list-style-type: none"> <li>the meaning of different kinds of numbers</li> <li>relationship between different kinds of numbers</li> <li>the relative size of different numbers</li> <li>representation of numbers in various ways</li> <li>the effect of operating with numbers</li> <li>the ability to estimate and check solutions.</li> </ul>	<ul style="list-style-type: none"> <li>Representation of numbers in a variety of ways and moving flexibly between representations</li> <li>Recognising and using properties of operations with different number systems</li> <li>Solving a variety of problems, using an increased range of numbers and the ability to perform multiple operations correctly and fluently</li> </ul>
<b>Patterns, Functions and Algebra</b>	<p>Algebra is the language for investigating and communicating most of Mathematics and can be extended to the study of functions and other relationships between variables. A central part of this content area is for the learner to achieve efficient manipulative skills in the use of algebra. It also focuses on the:</p> <ul style="list-style-type: none"> <li>description of patterns and relationships through the use of symbolic expressions, graphs and tables; and</li> <li>identification and analysis of regularities and change in patterns, and relationships that enable learners to make predictions and solve problems.</li> </ul>	<ul style="list-style-type: none"> <li>Investigation of numerical and geometric patterns to establish the relationships between variables</li> <li>Expressing rules governing patterns in algebraic language or symbols</li> <li>Developing algebraic manipulative skills that recognize the equivalence between different representations of the same relationship</li> <li>Analysis of situations in a variety of contexts in order to make sense of them</li> <li>Representation and description of situations in algebraic language, formulae, expressions, equations and graphs</li> </ul>
<b>Space and Shape (Geometry)</b>	<p>The study of Space and Shape improves understanding and appreciation of the pattern, precision, achievement and beauty in natural and cultural forms. It focuses on the properties, relationships, orientations, positions and transformations of two-dimensional shapes and three-dimensional objects.</p>	<ul style="list-style-type: none"> <li>Drawing and constructing a wide range of geometric figures and solids using appropriate geometric instruments</li> <li>Developing an appreciation for the use of constructions to investigate the properties of geometric figures and solids</li> <li>Developing clear and more precise descriptions and classification categories of geometric figures and solids</li> <li>Solving a variety of geometric problems drawing on known properties of geometric figures and solids</li> </ul>
<b>Measurement</b>	<p>Measurement focuses on the selection and use of appropriate units, instruments and formulae to quantify characteristics of events, shapes, objects and the environment. It relates directly to the learner's scientific, technological and economic worlds, enabling the learner to:</p> <ul style="list-style-type: none"> <li>make sensible estimates; and</li> <li>be alert to the reasonableness of measurements and results.</li> </ul>	<ul style="list-style-type: none"> <li>Using formulae for measuring area, perimeter, surface area and volume of geometric figures and solids</li> <li>Selecting and converting between appropriate units of measurement</li> <li>Using the Theorem of Pythagoras to solve problems involving right-angled triangles</li> </ul>
<b>Data Handling</b>	<p>Data Handling involves asking questions and finding answers in order to describe events and the social, technological and economic environment. Through the study of data handling, the learner develops the skills to collect, organize, represent, Interpret, analyse and report data.</p> <p>The study of probability enables the learner to develop skills and techniques for making informed predictions, and describing randomness and uncertainty.</p>	<ul style="list-style-type: none"> <li>Posing of questions for investigation</li> <li>Collecting, summarizing, representing and critically analysing data in order to interpret, report and make predictions about situations</li> <li>Probability of outcomes include both single and compound events and their relative frequency in simple experiments</li> </ul>

## 2.6 WEIGHTING OF CONTENT AREAS

The weighting of Mathematics content areas serves two primary purposes:

- guidance on the time needed to adequately address the content within each content area
- guidance on the spread of content in the examination (especially end-of-year summative assessment).

WEIGHTING OF CONTENT AREAS			
Content Area	Grade 7	Grade 8	Grade 9
Number, Operations and Relations	30%	25%	15%
Patterns, Functions and Algebra	25%	30%	35%
Space and Shape (Geometry)	25%	25%	30%
Measurement	10%	10%	10%
Data Handling	10%	10%	10%
	<b>100%</b>	<b>100%</b>	<b>100%</b>

## 2.7 SPECIFICATION OF CONTENT

The Specification of Content in Section 2 shows progression in terms of concepts and skills from Grades 7 - 9 for each Content Area. However, in certain topics the concepts and skills are similar in two or three successive grades. The Clarification of Content in Section 3 provides guidelines on how progression should be addressed in these cases. The Specification of Content in Section 2 should therefore be read in conjunction with the Clarification of Content in Section 3.

**SPECIFICATION OF CONTENT (PHASE OVERVIEW)**  
**NUMBERS, OPERATIONS AND RELATIONSHIPS**

- Progression in Numbers, Operations and Relationships in the Senior Phase is achieved primarily by:
  - development of calculations using whole numbers to calculations using rational numbers, integers and numbers in exponential form
  - development of understanding of different number systems from **natural** and **whole** numbers to **integers** and **rational** numbers, as well as the recognition of **irrational** numbers
  - increasing use of properties of numbers to perform calculations
  - increasing complexity of contexts for solving problems
- Numbers, Operations and Relationships in the Senior Phase consolidates work done in the Intermediate Phase and is geared towards making learners competent and efficient in performing calculations particularly with integers and rational numbers.
- Recognising and using the properties of operations for different numbers provides a critical foundation for work in algebra when learners work with variables in place of numbers and manipulate algebraic expressions and solve algebraic equations.

TOPICS	GRADE 7	GRADE 8	GRADE 9
<b>Whole numbers</b>  <b>1.1 Mental calculations</b> Revise the following done in Grade 6: <ul style="list-style-type: none"> <li>Multiplication of whole numbers to at least <math>12 \times 12</math></li> <li>Multiplication facts for:               <ul style="list-style-type: none"> <li>- units and tens by multiples of ten</li> <li>- units and tens by multiples of 100</li> <li>- units and tens by multiples of 1 000</li> <li>- units and tens by multiples of 10 000</li> </ul> </li> <li>Inverse operation between multiplication and division</li> </ul> <b>Ordering and comparing whole numbers</b> <ul style="list-style-type: none"> <li>Revise the following done in Grade 6:               <ul style="list-style-type: none"> <li>- order, compare and represent numbers to at least 9-digit numbers</li> <li>- recognize and represent prime numbers to at least 100</li> <li>- round off numbers to the nearest 5, 10, 100 or 1 000</li> </ul> </li> </ul>	<b>Mental calculations</b> <ul style="list-style-type: none"> <li>Revise multiplication of whole numbers to at least <math>12 \times 12</math></li> </ul>	<b>Ordering and comparing whole numbers</b> <ul style="list-style-type: none"> <li>Revise prime numbers to at least 100</li> </ul>	<b>EcoleBooks</b>

**SPECIFICATION OF CONTENT (PHASE OVERVIEW)**  
**PATTERNS, FUNCTIONS AND ALGEBRA**

- Progression in Patterns, Functions and Algebra is achieved primarily by
  - increasing the range and complexity of:
    - ◆ relationships between numbers in given patterns
    - ◆ rules, formulae and equations for which input and output values can be found
    - ◆ equations that can be solved
  - developing more sophisticated skills and techniques for:
    - ◆ solving equations
    - ◆ expanding and simplifying algebraic expressions
    - ◆ drawing and interpreting graphs
    - developing the use of algebraic language and conventions.
- In Patterns, Functions and Algebra, learners' conceptual development progresses from:
  - an understanding of number to an understanding of variables, where the variables are numbers of a given type (e.g. natural numbers, integers, rational numbers) in generalized form
  - the recognition of patterns and relationships to the recognition of functions, where functions have unique outputs values for specified input values
  - a view of Mathematics as memorized facts and separate topics to seeing Mathematics as interrelated concepts and ideas represented in a variety of equivalent forms (e.g. a number pattern, an equation and a graph representing the same relationship)
- While techniques for solving equations are developed in Patterns, Functions and Algebra, learners also practise solving equations in Measurement and Space and Shape, when they apply known formulae to solve problems.

## SECTION 3: CONTENT CLARIFICATION

### 3.1 INTRODUCTION

- In this chapter, content clarification includes:
  - teaching guidelines
  - suggested sequencing of topics per term
  - suggested pacing of topics over the year.
- Each Content Area has been broken down into topics. The sequencing of topics within terms gives an idea of how content areas can be spread and re-visited throughout the year.
- Teachers may choose to sequence and pace the contents differently from the recommendations in this section. However, cognisance should be taken of the relative weighting and notional hours of the Content Areas for this phase.

### 3.2 ALLOCATION OF TEACHING TIME

Time has been allocated in the following way:

- 10 weeks per term, with 4,5 hours for Mathematics per week ( $10 \times 4 \times 4,5 \text{ hours} = 180 \text{ hours per year}$ )
- Between 6 and 12 hours have been allocated for revision and assessment per term
- Therefore, 150 hours of teaching have been distributed across the Content Areas
- The distribution of time per topic, has taken account of the weighting for the Content Area as specified for the Senior Phase in Section 2.
- The weighting of Content Areas represents notional hours; therefore, the recommended distribution of hours may vary slightly across grades.

### 3.3 CLARIFICATION NOTES WITH TEACHING GUIDELINES

The tables below provide the teacher with:

- content areas and topics per grade per term;
- concepts and skills per term;
- clarification notes with teaching guidelines; and
- the duration of time allocated per topic in hours.

TIME ALLOCATION PER TOPIC: GRADE 7							
TERM 1		TERM 2		TERM 3		TERM 4	
Topic	Time	Topic	Time	Topic	Time	Topic	Time
Whole numbers	9 hours	Common fractions	9 hours	Numeric and geometric patterns	6 hours	Integers	9 hours
Exponents	9 hours	Decimal fractions	9 hours	Functions and relationships	3 hours	Numeric and geometric patterns	3 hours
Construction of Geometric figures	10 hours	Functions and relationships	3 hours	Algebraic expressions	3 hours	Functions and relationships	3 hours
Geometry of 2D shapes	10 hours	Area and perimeter of 2D shapes	7 hours	Algebraic equations	3 hours	Algebraic expressions	3 hours
Geometry of straight lines	2 hours	Surface area and Volume of 3D objects	8 hours	Graphs	6 hours	Algebraic equations	4 hours
				Transformation geometry	9 hours	Collect, organize and summarize data	4 hours
				Geometry of 3D objects	9 hours	Represent data	3 hours
						Interpret, analyse and report data	3,5 hours
						Probability	4,5 hours
Revision/assessment	5 hours	Revision/assessment	9 hours	Revision/assessment	6 hours	Revision/assessment	8 hours
<b>TOTAL: 45 hours</b>		<b>TOTAL: 45 hours</b>		<b>TOTAL: 45 hours</b>		<b>TOTAL: 45 hours</b>	

### 3.3.1 Clarification of content for Grade 7

TERM 1 – GRADE 7			
CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES
Numbers, Operations and Relationships	1.1 Whole numbers	<p><b>Mental calculations</b></p> <p>Revise the following done in Grade 6:</p> <ul style="list-style-type: none"> <li>Multiplication of whole numbers to at least <math>12 \times 12</math></li> <li>Multiplication facts for: <ul style="list-style-type: none"> <li>Units and tens by multiples of ten</li> <li>Units and tens by multiples of 100</li> <li>Units and tens by multiples of 1 000</li> <li>Units and tens by multiples of 10 000</li> </ul> </li> <li>Inverse operation between multiplication and division</li> </ul>	<p><b>What is different to Grade 6?</b></p> <ul style="list-style-type: none"> <li>Prime factors of 3-digit numbers</li> <li>LCM and HCF</li> <li>More complex financial contexts for solving problems</li> </ul> <p>In Grade 7 learners consolidate number knowledge and calculation techniques for whole numbers, developed in the Intermediate Phase.</p> <p><b>Mental calculations</b></p> <p>Mental calculations should be used to practice concepts and skills developed through the main lesson, sometimes with smaller number ranges. Learners should not be asked to do random calculations each day. Rather, mental calculations should be used as an opportunity to consolidate four aspects of learners' number knowledge:</p> <ul style="list-style-type: none"> <li>number facts (number bonds and times tables)</li> <li>calculation techniques (doubling and halving, using multiplication to do division, multiplying and dividing by 10, 100, 1 000)</li> <li>multiplying by multiples of 10, 100, 1 000</li> <li>building up and breaking down numbers, rounding off and compensating etc)</li> <li>number concept (counting, ordering and comparing, place value, odd and even numbers, multiples and factors)</li> <li>properties of numbers (identity elements for addition and multiplication;</li> <li>commutative and associative property for addition and multiplication;</li> <li>inverse operation for multiplication and division; inverse operation for addition and subtraction)</li> </ul>

CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in hours)
Numbers, Operations and Relationships	1.1 Whole numbers	<p><b>Ordering and comparing whole numbers</b></p> <p>Revise the following done in Grade 6:</p> <ul style="list-style-type: none"> <li>Order, compare and represent numbers to at least 9-digit numbers</li> <li>Recognise and represent prime numbers to at least 100</li> <li>Rounding off numbers to the nearest 5, 10, 100 or 1 000</li> </ul>	<p><b>Ordering and comparing numbers</b></p> <p>Learners should be given a range of exercises such as:</p> <ul style="list-style-type: none"> <li>Arrange given numbers from the smallest to the biggest; or biggest to smallest</li> <li>Fill in missing numbers in <ul style="list-style-type: none"> <li>a sequence</li> <li>on a number grid</li> </ul> </li> <li>on a number line e.g. which whole number is halfway between 471 340 and 471 350.</li> <li>Fill in &lt;, = or &gt;</li> </ul> <p><b>Examples:</b></p> <p>a) 247 889 * 247 898 b) 784 109 * 785 190</p> <p><b>Properties of whole numbers</b></p> <p>Revise the following done in Grade 6:</p> <ul style="list-style-type: none"> <li>Recognise and use the commutative; associative; distributive properties with whole numbers</li> <li>Recognise and use 0 in terms of its additive property (identity element for addition)</li> <li>Recognise and use 1 in terms of its multiplicative property (identity element for multiplication)</li> </ul>	

CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in hours)
Numbers, Operations and Relationships	1.1 Whole numbers	<ul style="list-style-type: none"> <li>- Addition and subtraction as inverse operations</li> <li>- Multiplication and division as inverse operations</li> <li>- 0 is the identity element for addition: <math>t + 0 = t</math></li> <li>- 1 is the identity element for multiplication: <math>t \times 1 = t</math></li> </ul> <p><b>Illustrating the properties with whole numbers</b></p> <p>a) <math>33 + 99 = 99 + 33 = 132</math></p> <p>b) <math>51 + (19 + 46) = (51 + 19) + 46 = 116</math></p> <p>c) <math>4(12 + 9) = (4 \times 12) + (4 \times 9) = 48 + 36 = 84</math></p> <p>d) <math>(9 \times 64) + (9 \times 36) = 9 \times (64 + 36) = 9 \times 100 = 900</math></p> <p>e) If <math>33 + 99 = 132</math>, then <math>132 - 99 = 33</math> and <math>132 - 33 = 99</math></p> <p>f) If <math>20 \times 5 = 110</math>, then <math>110 \div 20 = 5</math> and <math>110 \div 5 = 20</math></p> <p><b>Calculations with whole numbers</b></p> <ul style="list-style-type: none"> <li>• Revise the following done in Grade 6, without use of calculators: <ul style="list-style-type: none"> <li>- Addition and subtraction of whole numbers to at least 6-digit numbers</li> <li>- Multiplication of at least whole 4-digit by 2-digit numbers</li> <li>- Division of at least whole 4-digit by 2-digit numbers</li> </ul> </li> <li>• Perform calculations using all four operations on whole numbers, estimating and using calculators where appropriate</li> </ul> <p><b>Calculation techniques</b></p> <ul style="list-style-type: none"> <li>• Use a range of techniques to perform and check written and mental calculations of whole numbers including: <ul style="list-style-type: none"> <li>- estimation</li> <li>- adding, subtracting and multiplying in columns</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>- Addition and subtraction as inverse operations</li> <li>- Multiplication and division as inverse operations</li> <li>- 0 is the identity element for addition: <math>t + 0 = t</math></li> <li>- 1 is the identity element for multiplication: <math>t \times 1 = t</math></li> </ul> <p><b>Calculations with whole numbers</b></p> <ul style="list-style-type: none"> <li>• Learners should do context free calculations and solve problems in contexts</li> <li>• Learners should become more confident in and more independent at mathematics, if they have techniques <ul style="list-style-type: none"> <li>- to check their solutions themselves, e.g. using inverse operations; using calculators</li> <li>- to judge the reasonableness of their solutions e.g. estimate by rounding off; estimate by doubling or halving;</li> </ul> </li> <li>• Adding, subtracting and multiplying in columns, and long division, should only be used to practice number facts and calculation techniques, and hence should be done with familiar and smaller number ranges. For big and unwieldy calculations, learners should be encouraged to use a calculator.</li> </ul> <p><b>Multiples and factors</b></p> <ul style="list-style-type: none"> <li>• Practice with finding multiples and factors of whole numbers are especially important when learners do calculations with fractions. They use this knowledge to find the LCM when one denominator is a multiple of another, and also when they simplify fractions or have to find equivalent fractions.</li> <li>• Factorising whole numbers lays the foundation for factorisation of algebraic expressions.</li> <li>• Using the definition of prime numbers, emphasise that 1 is not classified as a prime number</li> </ul>	

CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in hours)
Numbers, Operations and Relationships	1.1 Whole numbers	<ul style="list-style-type: none"> <li>- long division</li> <li>- rounding off and compensating</li> <li>- using a calculator</li> </ul> <p><b>Multiples and factors</b></p> <ul style="list-style-type: none"> <li>• Revise the following done in Grade 6:           <ul style="list-style-type: none"> <li>- Multiples of 2-digit and 3-digit whole numbers</li> <li>- Factors of 2-digit and 3-digit whole numbers</li> <li>- Prime factors of numbers to at least 100</li> <li>• List prime factors of numbers to at least 3-digit whole numbers</li> <li>• Find the LCM and HCF of numbers to at least 3-digit whole numbers, by inspection or factorisation</li> </ul> </li> </ul>	<p><b>Examples</b></p> <p>a) The multiples of 6 are 6, 12, 18, 24,... or <math>M_6 = \{6; 12; 18; 24;...\}</math></p> <p>b) LCM of 6 and 18 is 18 LCM of 6 and 7 is 42</p> <p>c) The factors of 24 are 1, 2, 3, 4, 6, 12 and 24 by inspection and, the prime factors of 24 are 2 and 3</p> <p>d) The factors of 140 are 1, 2, 5, 7, 10, 14, 28, 35, 70 and 140</p> <p>e) Determine the HCF of 120; 300 and 900</p> <p>Learners do this by finding the prime factors of the numbers first.</p> <p><math>120 = 5 \times 3 \times 2^3</math>. Initially learners may write this as: <math>5 \times 3 \times 2 \times 2 \times 2</math></p> <p><math>300 = 5^2 \times 3 \times 2^2</math></p> <p><math>900 = 5^2 \times 3^2 \times 2^3</math></p> <p><math>HCF = 5 \times 3 \times 2^2 = 60</math> (Multiply the common prime factors of the three numbers)</p> <p><b>Solving problems</b></p> <ul style="list-style-type: none"> <li>• Solve problems involving whole numbers, including:           <ul style="list-style-type: none"> <li>- Comparing two or more quantities of the same kind (ratio)</li> <li>- Comparing two quantities of different kinds (rate)</li> <li>- Sharing in a given ratio where the whole is given</li> </ul> </li> <li>• Solve problems that involve whole numbers, percentages and decimal fractions in financial contexts such as:           <ul style="list-style-type: none"> <li>- Profit, loss and discount</li> <li>- Budgets</li> <li>- Accounts</li> <li>- Loans</li> <li>- Simple interest</li> </ul> </li> </ul>

**REVISION/ASSESSMENT:**

At this stage learners should be assessed on:

- calculating and solving problems with common fractions and decimal fractions
- using formulae to find area and perimeter of 2D shapes
- using formulae to find volume and surface area of 3D objects

GRADE 7 – TERM 3			
CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES
Patterns, functions and algebra	2.1 <b>Numeric and geometric patterns</b>	<p><b>Investigate and extend patterns</b></p> <ul style="list-style-type: none"> <li>Investigate and extend numeric and geometric patterns looking for relationships between numbers, including patterns:           <ul style="list-style-type: none"> <li>- represented in physical or diagram form</li> <li>- not limited to sequences involving a constant difference or ratio</li> <li>- of learner's own creation</li> <li>- represented in tables</li> </ul> </li> <li>Describe and justify the general rules for observed relationships between numbers in own words</li> </ul>	<p><b>What is different to the Intermediate Phase?</b></p> <ul style="list-style-type: none"> <li>In the Senior Phase the emphasis is less on merely extending a pattern, and more on describing a general rule for the pattern or sequence and being able to predict unknown terms in a sequence using a general rule.</li> <li>Investigating number patterns is an opportunity to generalize – to give general algebraic descriptions of the relationship between terms and its position in a sequence and to justify solutions.</li> <li>The range of number patterns are extended to include patterns integers, square numbers and cubic numbers</li> <li>As learners become used to describing patterns in their own words, their descriptions should become more precise and efficient with the use of algebraic language to describe general rules of patterns.</li> <li>It is useful also to introduce the language of 'term in a sequence' in order to distinguish the term from the position of a term in a sequence</li> </ul> <p><b>Numeric and geometric patterns are done again in Term 4, where patterns can include integers. In this term patterns should be restricted to using whole numbers, numbers in exponential form, common fractions and decimal fractions.</b></p> <p><b>Kinds of numeric patterns</b></p> <ul style="list-style-type: none"> <li>Provide a sequence of numbers, learners have to identify a pattern or relationship between consecutive terms in order to extend the pattern.</li> </ul> <p><b>Examples</b></p> <p>Give a rule to describe the relationship between the numbers in the sequences below. Use this rule to give the next three numbers in the sequence:</p> <ol style="list-style-type: none"> <li>3; 7; 11; 15; ...</li> <li>120; 115; 110; 105; ...</li> </ol> <p>Here learners could identify the constant difference between consecutive terms in order to extend the pattern. These patterns can be described in learners' own words as (a) 'adding 4' or 'counting in 4s' or 'add 4s to the previous number in the pattern' (b) 'subtracting 5' or 'counting down in 5s', or 'subtract 5 from the previous number in the pattern'.</p> <ol style="list-style-type: none"> <li>2; 4; 8; 16; ...</li> </ol> <p>Here learners could identify the constant ratio between consecutive terms. This pattern can be described in learners' own words as 'multiply the previous number by 2'.</p>

CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in hours)											
Patterns, functions and algebra	2.1 Numeric and geometric patterns	<p>This pattern has neither a constant difference nor constant ratio. This pattern can be described in learners' own words as 'increase the difference between consecutive terms by 1 each time' or 'add 1 more than was added to get the previous term'. Using this rule, the next 3 terms will be 22, 29, 37.</p> <ul style="list-style-type: none"> <li>Provide a sequence of numbers, learners have to identify a pattern or <b>relationship between the term and its position in the sequence</b>. This enables learners to predict a term in a sequence based on the position of that term in the sequence. It is useful for learners to represent these sequences in tables so that they can consider the position of the term.</li> </ul> <p><b>Examples:</b></p> <p>a) Provide a rule to describe the relationship between the numbers in this sequence: 1; 4; 9; 16; ... . Use the rule to find the 10th term in this sequence. Firstly, learners have to understand that the '10th term' refers to position 10 in the number sequence. They have to find a rule in order to determine the 10th term, rather than continuing the sequence to the tenth term.</p> <p>This sequence can be represented in the following table:</p> <table border="1"> <thead> <tr> <th>Position in sequence</th> <th>1</th> <th>2</th> <th>3</th> <th>4</th> <th>10</th> </tr> </thead> <tbody> <tr> <th>Term</th> <td>1</td> <td>4</td> <td>9</td> <td>16</td> <td>?</td> </tr> </tbody> </table> <p>Learners should recognize that each term in the bottom row is obtained by squaring the position number in the top row. Thus the 10th term will be '10 squared' or <math>10^2</math>, which is 100. Using the same rule, learners can also be asked what term number or position will 625 be? If the term is obtained by squaring the position number of the term, then the position number can be obtained by finding the square root of the term. Hence, 625 will be the 25th term in the sequence since <math>\sqrt{625} = 25</math></p>	Position in sequence	1	2	3	4	10	Term	1	4	9	16	?	
Position in sequence	1	2	3	4	10										
Term	1	4	9	16	?										

CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in hours)
			<p>b) Provide a rule to describe the relationship between the numbers in this sequence: 4; 7; 10; 13; ..... Use the rule to find the 20th term in the sequence. If learners consider only the relationship between consecutive terms, then they can continue the pattern ('add 3 to previous number') to the 20th term to find the answer. However, if they look for a relationship or rule between the term and the position of the term, they can predict the answer without continuing the pattern. Using number sentences can be useful to find the rule:</p> <p>1st term: <math>4 = 3(1) + 1</math>      2nd term: <math>7 = 3(2) + 1</math>      3rd term: <math>10 = 3(3) + 1</math>      4th term: <math>13 = 3(4) + 1</math></p> <p>The number in the brackets corresponds to the position of the term. Hence, the 20th term will be: <math>3(20) + 1 = 61</math></p> <p>The rule in learners' own words can be written as '3 x the position of the term + 1'</p> <ul style="list-style-type: none"> <li>These types of numeric patterns develop an understanding of functional relationships, in which you have a dependent variable (position of the term) and independent variable (the term itself), and where you have a unique output for any given input value.</li> </ul> <p><b>Kinds of geometric patterns</b></p> <ul style="list-style-type: none"> <li>Geometric patterns are number patterns represented diagrammatically. The diagrammatic representation reveals the structure of the number pattern.</li> <li>Hence, representing the number patterns in tables, makes it easier for learners to describe the general rule for the pattern.</li> </ul> <p><b>Example</b>      Consider this pattern for building hexagons with matchsticks. How many matchsticks will be used to build the 10th hexagon?</p> 	

CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in hours)															
Patterns, functions and algebra	2.1  Numeric and geometric patterns	<p>For the 2nd hexagon, you have <math>2 \times 6</math> matches; for the 3rd hexagon you have <math>3 \times 6</math> matches; Using this pattern for building hexagons, the 10th hexagon will have <math>10 \times 6</math> matches.</p> <p>Learners can also use a table to record the number of matches used for each hexagon. This way they can look at the number pattern related to the number of matches used for each new hexagon.</p> <table border="1"> <thead> <tr> <th>Position of hexagon in pattern</th> <th>1</th> <th>2</th> <th>3</th> <th>4</th> <th>5</th> <th>6</th> <th>10</th> </tr> </thead> <tbody> <tr> <th>Number of matches</th> <td>6</td> <td>12</td> <td>18</td> <td></td> <td></td> <td></td> <td></td> </tr> </tbody> </table> <p><b>Describing patterns</b></p> <ul style="list-style-type: none"> <li>It does not matter if learners are already familiar with a particular pattern. Their descriptions of the same pattern can be different when they encounter it at different stages of their mathematical development.</li> </ul> <p><b>Example</b></p> <p>The rule for the sequence: 4; 7; 10; 13 can be described in the following ways:</p> <ol style="list-style-type: none"> <li>add three to the previous term</li> <li>3 times the position of the term + 1 or <math>3 \times</math> the position of the term + 1</li> <li><math>3(n) + 1</math>, where <math>n</math> is the position of the term</li> <li><math>3(n) + 1</math>, where <math>n</math> is a Natural number.</li> </ol>	Position of hexagon in pattern	1	2	3	4	5	6	10	Number of matches	6	12	18					
Position of hexagon in pattern	1	2	3	4	5	6	10												
Number of matches	6	12	18

	3.2 <b>Geometry of 3D objects</b>	<p><b>Classifying 3D objects</b></p> <ul style="list-style-type: none"> <li>Describe, sort and compare polyhedra in terms of           <ul style="list-style-type: none"> <li>shape and number of faces</li> <li>number of vertices</li> <li>number of edges</li> </ul> </li> </ul> <p><b>Building 3D model</b></p> <ul style="list-style-type: none"> <li>Revise using nets to create models of geometric solids, including:           <ul style="list-style-type: none"> <li>cubes</li> <li>prisms</li> </ul> </li> </ul>	<p><b>What is different to Grade 6?</b></p> <ul style="list-style-type: none"> <li>Most of this work consolidates what has been done in Grade 6.</li> </ul> <p><b>Polyhedra</b></p> <p>Examples of sorting or grouping categories:</p> <ul style="list-style-type: none"> <li>cubes (only square faces)</li> <li>rectangular prisms (only rectangular faces)</li> <li>triangular prisms (only triangular and rectangular faces)</li> <li>pyramids (square and triangular faces)</li> <li>cylinders (circular and rectangular faces).</li> </ul> <p><b>Using and constructing nets</b></p> <ul style="list-style-type: none"> <li>Using and constructing nets are useful contexts for exploring or consolidating properties of polyhedra.</li> <li>Learners should recognize the nets of different solids.</li> <li>Learners should draw sketches of the nets using their knowledge of shape and number of faces of the solids, before drawing and cutting out the nets to build models.</li> <li>The construction of nets is based on the number and shape of faces of the solids, and do not require measuring of internal angles of polygons.</li> <li>Learners have to work out the relative position of the faces of the nets, and use trial and error to match up the edges and vertices, in order to build the 3D object.</li> </ul>	<b>9 hours</b>

**REVISION/ASSESSMENT:**

At this stage learners should have been assessed on:

- numeric and geometric patterns
- functions and relationships
- algebraic expressions
- algebraic equations
- graphs
- transformation geometry
- geometry of 3D objects

GRADE 7 – TERM 4

Patterns, functions and algebra	2.1 Numeric and geometric patterns	<p><b>Investigate and extend patterns</b></p> <ul style="list-style-type: none"> <li>Investigate and extend numeric and geometric patterns looking for relationships between numbers, including patterns:           <ul style="list-style-type: none"> <li>- represented in physical or diagram form</li> <li>- not limited to sequences involving a constant difference or ratio</li> <li>- of learner's own creation</li> <li>- represented in tables</li> <li>- represented algebraically</li> </ul> </li> <li>Describe and justify the general rules for observed relationships between numbers in own words or in algebraic language</li> </ul>	<p><b>What is different to Grade 7?</b></p> <ul style="list-style-type: none"> <li>The range of number patterns are extended to include patterns with multiplication and division with integers, numbers in exponential form</li> <li>As learners become used to describing patterns in their own words, their descriptions should become more precise and efficient with the use of algebraic language to describe general rules of patterns</li> <li>It is useful also to introduce the language of 'term in a sequence' in order to distinguish the term from the position of a term in a sequence</li> <li>Investigating number patterns is an opportunity to generalize – to give general algebraic descriptions of the relationship between terms and their position in a sequence and to justify solutions.</li> </ul> <p><b>Kinds of numeric patterns</b></p> <ul style="list-style-type: none"> <li>Given a sequence of numbers, learners have to identify a pattern or <b>relationship between consecutive terms</b> in order to extend the pattern.</li> </ul> <p><b>Examples</b></p> <p>Provide a rule to describe the relationship between the numbers in the sequences below. Use this rule to provide the next three numbers in the sequence:</p> <p>a) -3; -7; -11; -15; ... ....</p> <p>Here learners should identify the constant difference between consecutive terms in order to extend the pattern. This pattern can be described in learners' own words as 'adding -4' or 'counting in -4's' or 'add -4 to the previous number in the pattern'.</p> <p>b) 2; -4; 8; -16; 32 ... ....</p> <p>Here learners should identify the constant ratio between consecutive terms. This pattern can be described in learners' own words as 'multiply the previous number by -2'.</p> <p>c) 1; 2; 4; 7; 11; 16 .... ....</p> <p>This pattern has neither a constant difference nor constant ratio. This pattern can be described in learners' own words as 'increase the difference between consecutive terms by 1 each time' or 'add 1 more than was added to get the previous term'. Using this rule, the next 3 terms will be 22; 29; 37.</p> <ul style="list-style-type: none"> <li>Given a sequence of numbers, learners have to identify a pattern or <b>relationship between the term and its position in the sequence</b>. This enables learners to predict a term in a sequence based on the position of that term in the sequence. It is useful for learners to represent these sequences in tables so that they can consider the position of the term.</li> </ul>	Total time for Numeric and geometric patterns:  4,5 hours

CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in hours)												
Patterns, functions and algebra	2.1 Numeric and geometric patterns		<p><b>Examples</b></p> <p>a) Provide a rule to describe the relationship between the numbers in this sequence: 1; 8; 27; 64; ... Use this rule to find the 10th term in this sequence. Firstly, learners have to understand that the '10th term' refers to position in the number sequence. They have to find a rule in order to determine the 10th term, rather than continuing the sequence to the tenth term.</p> <p><b>Example</b></p> <p>b) This sequence can be re-presented in the following table:</p> <table border="1"> <thead> <tr> <th>Position in sequence</th> <th>1</th> <th>2</th> <th>3</th> <th>4</th> <th>10</th> </tr> </thead> <tbody> <tr> <th>Term</th> <td>1</td> <td>8</td> <td>27</td> <td>64</td> <td>?</td> </tr> </tbody> </table> <p>Learners have to recognize that each term in the bottom row is obtained by cubing the position number in the top row. Thus the 10<sup>th</sup> term will be 10 cubed or <math>10^3</math>, which is. Using the same rule, learners can also be asked what term number or position will 512 be? If the term is obtained by cubing the position number of the term, then the position number can be obtained by finding the cube root of the term. Hence, 512 will be the 8<sup>th</sup> term in the sequence since <math>\sqrt[3]{512} = 8</math></p> <p>c) Provide a rule to describe the relationship between the numbers in this sequence: 4; 7; 10; 13; ... Use this rule to find the 20th term in this sequence. If learners consider only the relationship between consecutive terms, then they have to continue the pattern ('add 3 to previous number') to the 20th term to find the answer. However, if they look for a relationship or rule between the term and the position of the term, they can predict the answer without continuing the pattern. Using number sentences can be useful to find the rule:</p> <p>1st term: <math>4 = 3(1) + 1</math>      2nd term: <math>7 = 3(2) + 1</math>      3rd term: <math>10 = 3(3) + 1</math>      4th term: <math>13 = 3(4) + 1</math></p> <p>The number in the brackets corresponds to the position of the term. Hence, the 20th term will be: <math>3(20) + 1 = 61</math></p> <p>The rule in learners' own words can be written as '3 times the position of the term +1' or <math>3n + 1</math> where <math>n</math> is the position of the term.</p> <ul style="list-style-type: none"> <li>These types of numeric patterns develop an understanding of functional relationships, in which you have a dependent variable (position of the term) and independent variable (the term itself), and where you have a unique output for any given input value.</li> </ul>	Position in sequence	1	2	3	4	10	Term	1	8	27	64	?

From Grade 8 the term 'equations' is used.</p> <p>Solving equations using additive and multiplicative inverses as well as laws of exponents</p> <p><b>Algebraic equations are done again in Term 2 and Term 4. In this term the focus is on solving equations that involve multiplication and division of integers and numbers in exponential form, by inspection only.</b></p> <p>Learners have opportunities to write and solve equations when they write general rules to describe relationships between numbers in number patterns, and when they find input or output values for given rules in flow diagrams, tables and formulae.</p> <p>See further notes in Term 2.</p> 	Time for Algebraic equations in this term: 3 hours

**REVISION/ASSESSMENT:**

At this stage learners should have been assessed on:

- calculating and solving problems with whole numbers and integers
- representing, and calculating with, numbers in exponential form
- numeric and geometric patterns
- functions and relationships
- algebraic expressions
- algebraic equations

Total time for revision/assessment for the term

6 hours

GRADE 8 – TERM 2

Numbers, operations and relationships	1.4 Common fractions	<p><b>What is different to Grade 7?</b></p> <ul style="list-style-type: none"> <li>Divide by common fractions</li> <li>Squares, cubes, square roots and cube roots of common fractions</li> </ul> <p>In Grade 8 learners consolidate number knowledge and calculation techniques for common fractions, developed in Grade 7.</p> <p><b>Calculations using fractions</b></p> <ul style="list-style-type: none"> <li>Revise: <ul style="list-style-type: none"> <li>- addition and subtraction of common fractions, including mixed numbers</li> <li>- finding fractions of whole numbers</li> <li>- multiplication of common fractions, including mixed numbers</li> <li>• Divide whole numbers and common fractions by common fractions</li> <li>• Calculate the squares, cubes, square roots and cube roots of common fractions</li> </ul> </li> <p><b>Calculation techniques</b></p> <ul style="list-style-type: none"> <li>Revise: <ul style="list-style-type: none"> <li>- Convert mixed numbers to common fractions in order to perform calculations with them</li> <li>- Use knowledge of multiples and factors to write fractions in the simplest form before or after calculations</li> <li>- Use knowledge of equivalent fractions to add and subtract common fractions</li> <li>• Use knowledge of reciprocal relationships to divide common fractions</li> </ul> </li> </ul> </ul>	<p>Total time for common fractions:</p> <p>7 hours</p> <p><b>Example</b></p> $5\frac{1}{2} = \frac{11}{2}; \quad 6\frac{1}{3} = \frac{19}{3}$ <p>- To simplify fractions, learners use knowledge of common factors i.e. what can divide equally into the numerator and denominator of a fraction. Emphasize that when simplifying, the fractions must remain equivalent.</p> <p><b>Addition and subtraction</b></p> <ul style="list-style-type: none"> <li>LCMs have to be found when adding and subtracting fractions with different denominators. Here learners use knowledge of common multiples to find the LCM i.e. what number can both denominators be divided into.</li> </ul> <p><b>Multiplication</b></p> <ul style="list-style-type: none"> <li>For multiplication of fractions, learners should be encouraged to simplify fractions by dividing numerators and denominators by common factors.</li> <li>Learners should note the difference between adding or subtracting fractions and multiplying fractions</li> </ul> <p><b>Examples</b></p> $\frac{3}{4} + \frac{2}{5} = \frac{15}{20} + \frac{8}{20} = \frac{23}{20} = 1\frac{3}{20}$ $\frac{3}{4} \times \frac{2}{5} = \frac{3}{10}$ <ul style="list-style-type: none"> <li>(divide 2 and 4 by common factor 2)</li> <li>Learners should recognize that finding a ‘fraction <b>of</b> a whole number’ or ‘finding a fraction <b>of</b> a fraction’ means multiplying the fraction and the whole number or the fraction within the fraction.</li> </ul>

CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in hours)
Numbers, operations and relationships	1.4 Common fractions	<p><b>Solving problems</b></p> <ul style="list-style-type: none"> <li>Solve problems in contexts involving common fractions and mixed numbers, including grouping, sharing and finding fractions of whole numbers</li> </ul>	<ul style="list-style-type: none"> <li>When learners find fractions of whole numbers, the examples can be chosen to result either in whole numbers or fractions or both.</li> <li>Learners should also use the convention of writing the whole number as a fraction over when multiplying.</li> </ul> <p><b>Examples</b></p> <p>Find <math>\frac{4}{5}</math> of 20 = <math>\frac{4}{5} \times \frac{20}{1} = \frac{80}{5} = 16</math></p> <p>Find <math>\frac{2}{3}</math> of <math>\frac{5}{6} = \frac{2}{3} \times \frac{5}{6} = \frac{10}{18} = \frac{5}{9}</math></p> <p><b>Division</b></p> <ul style="list-style-type: none"> <li>The technique of ‘invert and multiply’ applies to division in general and not just to division by fractions. Hence, a useful way of making learners comfortable with division by fractions is to start with examples of division by whole numbers.</li> <li>Learners have to understand that dividing by a number is the same as multiplying by the reciprocal of the number i.e. the reciprocal of <math>n</math> is <math>\frac{1}{n}</math></li> </ul> <p><b>Examples:</b></p> <ol style="list-style-type: none"> <li><math>10 \div 5</math> is the same as <math>10 \times \frac{1}{5} = 2</math> (multiply by the reciprocal of 5)</li> <li><math>10 \div \frac{1}{5} = 10 \times 5 = 50</math> (multiply by the reciprocal of <math>\frac{1}{5}</math>)</li> </ol> <p>This can also be explained by using diagram models for fractions and asking, how many times does <math>\frac{1}{5}</math> fit into 10? We know that 5 fifths fit into 1 whole, so (5 x 10) fifths will fit into 10 wholes. Hence, <math>10 \div \frac{1}{5} = 50</math></p> <ol style="list-style-type: none"> <li><math>20 \div 4</math> is the same as <math>20 \times \frac{1}{4} = 5</math> (multiply by the reciprocal of 4)</li> <li><math>20 \div \frac{1}{4} = 20 \times 4 = 80</math> (multiply by the reciprocal of <math>\frac{1}{4}</math>)</li> </ol> <p>This can also be explained by using diagram models for fractions and asking, how many times does <math>\frac{1}{4}</math> fit into 20? We know that 4 quarters fit into 1 whole, so (4 x 20) quarters will fit into 20 wholes. Hence, <math>20 \div \frac{1}{4} = 80</math></p> <ol style="list-style-type: none"> <li>Once learners have done a few of the above examples, they can use the technique of multiplying by the reciprocal to divide fractions by fractions:  <math>\frac{3}{4} \div \frac{1}{2} = \frac{3}{4} \times \frac{2}{1} = \frac{6}{4} = \frac{3}{2} = 1\frac{1}{2}</math> (multiply by the reciprocal of <math>\frac{1}{2}</math>)</li> </ol> <p><b>Squares, cubes, square roots and cube roots</b></p> <ul style="list-style-type: none"> <li>Knowing the rules of operations for calculating squares, cubes, square roots and cube roots of common fractions is important</li> </ul>	

CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in hours)
Numbers, operations and relationships	1.4 Common fractions	<ul style="list-style-type: none"> <li>Revise:           <ul style="list-style-type: none"> <li>- finding percentages of whole numbers</li> <li>- calculating the percentage of part of a whole</li> <li>- calculating percentage increase or decrease</li> </ul> </li> <li>Calculate amounts if given percentage increase or decrease</li> <li>Solve problems in contexts involving percentages</li> </ul> <p><b>Equivalent forms</b></p> <ul style="list-style-type: none"> <li>Revise equivalent forms between:           <ul style="list-style-type: none"> <li>- common fractions (fractions where one denominator is a multiple of the other)</li> <li>- common fraction and decimal fraction forms of the same number</li> <li>- common fraction, decimal fraction and percentage forms of the same number</li> </ul> </li> </ul>	<p><b>Examples:</b></p> <p>a) <math>(\frac{3}{4})^2 = \frac{3^2}{4^2} = \frac{9}{16}</math></p> <p>b) <math>\sqrt{\frac{16}{25}} = \frac{\sqrt{16}}{\sqrt{25}} = \frac{4}{5}</math></p> <ul style="list-style-type: none"> <li>Once learners are comfortable doing all the operations with fractions, calculations do not have to be restricted to positive fractions.</li> </ul> <p><b>Calculation using percentages</b></p> <ul style="list-style-type: none"> <li>Learners should continue to do context free calculations and solve problems in contexts.</li> <li>When doing calculations using percentages, learners have to use the equivalent common fraction form, which is a fraction with denominator 100.</li> <li>Learners should become familiar with the equivalent fraction and decimal forms of common percentages eg. <math>25\%</math> is equivalent to <math>\frac{1}{4}</math> or 0,25; 50% is equivalent to <math>\frac{1}{2}</math> or 0,5; 60% is equivalent to <math>\frac{3}{5}</math> or 0,6.</li> <li>To calculate percentage of part of a whole, or percentage increase or decrease, learners have to learn the strategy of multiplying by <math>\frac{1}{100}</math>. It is useful for learners to learn to use calculators for some of these calculations where the fractions are not easily simplified.</li> <li>When using calculators, learners can use the equivalent decimal fraction form for percentages to do the calculations.</li> </ul> <p><b>Examples:</b></p> <p>a) Calculate of 60% of R105 Amount = <math>\frac{60}{100} \times R105 = R63</math></p> <p>b) What percentage is 40c of R3,20? Percentage = <math>\frac{40}{320} \times \frac{100}{1} = \frac{100}{8} = 12,5\%</math></p> <p>c) Calculate the percentage increase if the price of a bus ticket of R60 is increased to R84. Amount increased = R24. Therefore percentage increase = <math>\frac{24}{60} \times \frac{100}{1} = 40\%</math></p> <p>d) Calculate the percentage decrease if the price of petrol goes down from 20 cents a litre to 18 cents a litre. Amount decreased = 2 cents. Therefore percentage decrease = <math>\frac{2}{20} \times \frac{100}{1} = 10\%</math></p> <p>e) Calculate how much a car will cost if its original price of R150 000 is reduced by 15% Calculation involves finding <math>\frac{15}{100}</math> of R150 000 and then subtracting that amount from the original price. i.e. <math>\frac{15}{100} \times \frac{R150\ 000}{1} = R22\ 500</math> Hence new price of car = R150 000 – R22 500 = R127 500 Or <math>\frac{85}{100} \times \frac{R150\ 000}{1} = R127\ 500</math></p>

	1.2 <b>Exponents</b>	<p><b>Exponents</b></p> <ul style="list-style-type: none"> <li>Learners practise writing small and large numbers in scientific notation, which they might already have encountered in Natural Science. It is useful to refer to these contexts when discussing scientific notation.</li> <li>Calculations can be done with or without a calculator.</li> </ul> <p><b>Examples</b></p> <ol style="list-style-type: none"> <li>Calculate: <math>2,6 \times 10^5 \times 9 \times 10^7</math> without using a calculator and give answer in scientific notation.</li> <li>Write in scientific notation: 0,00053</li> <li>Calculate: <math>5,8 \times 10^{-4} + 2,3 \times 10^{-6}</math> without using a calculator.</li> </ol>	<p><b>Example:</b> 25 millionth = <math>2,5 \times 10^{-5}</math></p> <p>Total time for numeric and geometric patterns 4, 5 hours</p>	
Patterns, functions and algebra	2.1 <b>Numeric and geometric patterns</b>	<p><b>Investigate and extend patterns</b></p> <ul style="list-style-type: none"> <li>Investigate and extend numeric and geometric patterns looking for relationships between numbers including patterns:           <ul style="list-style-type: none"> <li>represented in physical or diagram form</li> <li>not limited to sequences involving a constant difference or ratio</li> <li>of learner's own creation</li> <li>represented in tables</li> <li>represented algebraically</li> </ul> </li> <li>Describe and justify the general rules for observed relationships between numbers in own words or in algebraic language</li> </ul>	<p><b>What is different to Grade 8?</b></p> <p>Learners consolidate work involving numeric and geometric patterns done in Grade 8.</p> <ul style="list-style-type: none"> <li>Investigating number patterns is an opportunity to generalize – to give general algebraic descriptions of the relationship between terms and their position in a sequence and to justify solutions.</li> </ul> <p><b>Kinds of numeric patterns</b></p> <ul style="list-style-type: none"> <li>Given a sequence of numbers, learners have to identify a pattern or <b>relationship between consecutive terms</b> in order to extend the pattern.</li> </ul> <p><b>Examples</b></p> <p>Provide a rule to describe the relationship between the numbers in the sequences below. Use this rule to give the next three numbers in the sequence:</p> <ol style="list-style-type: none"> <li>-1; -1,5; -2; -2,5 ...</li> <li>2; -1; 0,5; -0,25 ; 0,125 ...</li> </ol> <p>Here learners should identify the constant difference between consecutive terms in order to extend the pattern. This pattern can be described in learners' own words as 'adding -0,5' or 'counting in -0,5s' or 'add -0,5 to the previous number in the pattern'.</p> <p>Here learners should identify the constant ratio between consecutive terms. This pattern can be described in learners' own words as 'multiply the previous number by -0,5' .</p>	

CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in hours)											
Patterns, functions and algebra	2.1 Numeric and geometric patterns	<p>c) 1; 0; -2; -5; -9; -14 ... .</p> <p>This pattern has neither a constant difference nor constant ratio. This pattern can be described in learners' own words as 'subtract 1 more than was subtracted to get the previous term'. Using this rule, the next 3 terms will be -20, -27, -35</p> <ul style="list-style-type: none"> <li>Given a sequence of numbers, learners have to identify a pattern or <b>relationship between the term and its position in the sequence</b>. This enables learners to predict a term in a sequence based on the position of that term in the sequence. It is useful for learners to represent these sequences in tables so that they can consider the position of the term.</li> </ul> <p><b>Examples</b></p> <p>a) Provide a rule to describe the relationship between the numbers in this sequence: 2; 5; 10; 17 ... . Use your rule to find the 10th term in this sequence.</p> <p>Firstly, learners have to understand that the '10th term' refers to position 10 in the number sequence. They have to find a rule in order to determine the 10th term, rather than continuing the sequence up to the tenth term.</p> <p>This sequence can be represented in the following table:</p> <table border="1"> <thead> <tr> <th>Position in sequence</th> <th>1</th> <th>2</th> <th>3</th> <th>4</th> <th>10</th> </tr> </thead> <tbody> <tr> <th>Term</th> <td>2</td> <td>5</td> <td>10</td> <td>17</td> <td>?</td> </tr> </tbody> </table> <p>Learners have to recognize that each term in the bottom row is obtained by squaring the position number in the top row and adding. Thus the 10th term will be '10 squared +1' or <math>10^2 + 1</math> which is 101. Using the same rule, learners can also be asked what term number or position will be 626? If the term is obtained by squaring the position number of the term and adding 1, then the position number can be obtained by subtracting, then finding the square root of the term. Hence, 626 will be the 25th term in the sequence since <math>626 - 1 = 625</math> and <math>\sqrt{625} = 25</math>.</p> <p>b) Provide a rule to describe the relationship between the numbers in this sequence: -2; -5; -8; -11 ... . Use this rule to find the 20th term in this sequence.</p> <p>If learners consider only the relationship between consecutive terms, then they can continue the pattern ('add -3 to previous number') up to the 20th term to find the answer. However, if they look for a relationship or rule between the term and the position of the term, they can predict the answer without continuing the pattern. Using number sentences can be useful to find the rule:</p>	Position in sequence	1	2	3	4	10	Term	2	5	10	17	?	
Position in sequence	1	2	3	4	10										
Term	2	5	10	17	?										

CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in hours)
Patterns, functions and algebra	2.1 Numeric and geometric patterns	<p>1st term: <math>-2 = -3(1) + 1</math>      2nd term: <math>-5 = -3(2) + 1</math>      3rd term: <math>-8 = -3(3) + 1</math>      4th term: <math>-11 = -3(4) + 1</math></p> <p>The number in the brackets corresponds to the position of the term. Hence, the 20th term will be: <math>-3(20) + 1 = -59</math></p> <p>The rule in learners' own words can be written as <math>-3 \times</math> the position of the term + 1, or <math>-3n + 1</math>, where <math>n</math> is the position of the term.</p> <ul style="list-style-type: none"> <li>These types of numeric patterns develop an understanding of functional relationships, in which there is a dependent variable (position of the term) and an independent variable (the term itself), and where you have a unique output for any given input value.</li> </ul>	<p><b>Kinds of geometric patterns</b></p> <ul style="list-style-type: none"> <li>Geometric patterns are number patterns represented diagrammatically. The diagrammatic representation reveals the structure of the number pattern.</li> <li>Hence, representing the number patterns in tables, makes it easier for learners to describe the general rule for the pattern.</li> </ul> <p><b>Example</b></p> <p>Consider this pattern for building hexagons using matchsticks. How many matchsticks will be used to build the 10th hexagon? Provide an expression to describe the general term for this number sequence.</p>

In 3 years time Thandi will be twice as old as Sophie. How old is Thandi now?</p>	Total time for revision/assessment for the term 7 hours

**REVISION/ASSESSMENT:**

At this stage learners should have been assessed on:

- the properties of different number systems
- calculating and solving problems with whole numbers, integers, common fractions and decimal fractions, numbers in exponential form
- numeric and geometric patterns
- functions and relationships
- algebraic expressions
- algebraic equations

Area of a circle:	$A = \pi r^2$																											

### Solving equations using formulae

The use of formulae provides a context to practise solving equations by inspection or using additive or multiplicative inverses.

#### Example:

- If the perimeter of a square is 32 cm, what is the length of each side? Learners should write this as:  
 $4s = 32$  and solve by asking: 4 times what will be 32? **or** saying  $s = \frac{32}{4}$ .
- If the area of a rectangle is 200 cm<sup>2</sup>, and its length is 50 cm, what is its width?  
 Learners should write this as:  
 $50 \times b = 200$  and solve by inspection by asking: 50 times what will be 200? **or** saying  $b = \frac{200}{50}$

Measurement	4.1 Area and perimeter of 2D shapes	<ul style="list-style-type: none"> <li>Make sure learners know that the height of a triangle is a line segment drawn from any vertex perpendicular to the opposite side.</li> </ul> <p><b>Example:</b> <math>AD</math> is the height onto base <math>BC</math> of <math>\triangle ABC</math>.</p>  <p><b>For areas of triangles:</b></p> <ul style="list-style-type: none"> <li>Point out that every triangle has 3 bases, each with a related height or altitude.</li> <li><b>For conversions:</b></li> </ul> <ul style="list-style-type: none"> <li>- If <math>1\text{ cm} = 10\text{ mm}</math> then <math>1\text{ cm}^2 = 100\text{ mm}^2</math></li> <li>- If <math>1\text{ cm} = 100\text{ cm}</math> then <math>1\text{ m}^2 = 10\ 000\text{ cm}^2</math></li> </ul>	<p>Total time for revision/assessment for the term</p> <p>8 hours</p>	

**REVISION/ASSESSMENT:**

At this stage learners should have been assessed on:

- constructing geometric objects
- geometry of 2D shapes
- geometry of straight lines
- the Theorem of Pythagoras
- area and perimeter of 2D shapes

Data handling	5.1 Collect, organize and summarize data	<p><b>Collect data</b></p> <ul style="list-style-type: none"> <li>Pose questions relating to social, economic, and environmental issues</li> <li>Select and justify appropriate sources for the collection of data</li> <li>Distinguish between samples and populations, and suggest appropriate samples for investigation</li> <li>Select and justify appropriate methods for collecting data</li> </ul> <p><b>Organize and summarize data</b></p> <ul style="list-style-type: none"> <li>Organize numerical data in different ways in order to summarize by determining: <ul style="list-style-type: none"> <li>- measures of central tendency</li> <li>- measures of dispersion including extremes and outliers</li> </ul> </li> <li>Organize data according to more than one criteria</li> </ul>	<p><b>What is different to Grade 8?</b></p> <ul style="list-style-type: none"> <li>Organizing data according to more than one criteria</li> <li>Outliers</li> <li>Scatter plots</li> </ul> <p><b>Data sets and contexts</b></p> <p>Learners should be exposed to a variety of contexts that deal with social and environmental issues, and should work with given data sets, represented in a variety of ways, that include big number ranges, percentages and decimal fractions. Learners should then practise organizing and summarizing this data, analysing and interpreting the data, and writing a report about the data.</p> <p><b>Complete a data cycle</b></p> <p>Learners should complete at least one data cycle for the year, starting with posing their own questions, selecting the sources and method for collecting, recording, organizing, representing, then analysing, summarizing, interpreting and reporting on the data. Challenge learners to think about what kinds of questions and data need to be collected to be represented on a histogram, a pie chart, a bar graph, a line graph or a scatter plot.</p>	Total time for collecting and organizing data:  4 hours

CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in hours)
	<b>5.2</b>	<b>Represent data</b> <ul style="list-style-type: none"> <li>Draw a variety of graphs by hand/technology to display and interpret data including:           <ul style="list-style-type: none"> <li>- bar graphs and double bar graphs</li> <li>- histograms with given and own intervals</li> <li>- pie charts</li> <li>- broken-line graphs</li> <li>- scatter plots</li> </ul> </li> </ul>	<p><b>Representing data</b></p> <ul style="list-style-type: none"> <li>Pie charts to represent data do not have to be accurately drawn with a compass and protractor, etc. Learners can use any round object to draw a circle, then divide the circle into halves and quarters and eighths if needed, as a guide to estimate the proportions of the circle that need to be shown to represent the data. What is important is that the values or percentages associated with the data, are shown proportionally on the pie chart.</li> <li>Drawing, reading and interpreting pie charts is a useful context to re-visit equivalence between fractions and percentages, e.g. 25% of the data is represented by a <math>\frac{1}{4}</math> sector of the circle.</li> <li>It is also a context in which learners can find percentages of whole numbers e.g. if 25% of 300 learners like rugby, how many (actual number) learners like rugby?</li> <li>Histograms are used to represent grouped data shown in intervals on the horizontal axis of the graph. Point out the differences between histograms and bar graphs, in particular bar graphs that represent discrete data (e.g. favourite sports) compared to histograms that show categories in consecutive, non-overlapping interval, (e.g. test scores out of 100 shown in intervals of 10). The bars on bar graphs do not have to touch each other, while in a histogram they have to touch since they show consecutive intervals.</li> <li>Broken-line graphs refer to data graphs that represent data points joined by a line and are not the same as straight line graphs that are drawn using the equation of the line.</li> <li>Broken-line graphs are used to represent data that changes continuously over time, e.g. average daily temperature for a month. Each day's temperature is represented by a point on the graph, and once the whole month has been plotted, the points are joined to show a broke-line graph.</li> <li>Broken-line graphs are useful to read 'trends' and patterns in the data, for predictive purposes e.g. Will the temperatures go up or down in the next month?</li> <li>A scatter plot is used to represent data that involves two different criteria and the graph is used to look at the relationship between the two criteria, e.g. How does the performance of learners in Mathematics compare to their performance in English? Each point on the graph represents the results of one learner in Mathematics and English. After all the results have been plotted, you can compare the relationship between performance in English and Mathematics for all the learners i.e. if they score high in Mathematics, do they also score high in English? or, if they score high in Mathematics do they score low in English, or is there no relationship between what they score on Mathematics to what they score in English?</li> <li>The scatter plot allows one to see trends and make predictions, as well as identify outliers in the data.</li> </ul>	Total time for representing data: 3 hours

	<b>5.4 Probability</b>	<b>Probability</b> <ul style="list-style-type: none"> <li>• Consider situations with equally probable outcomes, and:</li> <li>- determine probabilities of compound events using two-way tables and tree diagrams</li> <li>- determine the probabilities of outcomes of events and predict their relative frequency in simple experiments</li> <li>- compare relative frequency with probability and explain possible differences</li> </ul>	<p><b>Probability experiments</b></p> <p>In Grades 8 and 9 probability experiments are less important, and learners should consider probability for hypothetical events. In Grade 9, learners have to consider outcomes of compound events and use two-way tables and tree diagrams to work out the probability of an outcome.</p> <p><b>Probability of compound events</b></p> <p>For example, what is the probability of a woman giving birth to two boys after each other? A two-way table can be used:</p> <table border="1" data-bbox="473 541 663 1208"> <tr> <td colspan="2" rowspan="2"></td> <th colspan="2">2nd birth</th> </tr> <tr> <th>Boy</th> <th>Girl</th> </tr> <tr> <th rowspan="2">1st birth</th> <th>Boy</th> <td>BB</td> <td>BG</td> </tr> <tr> <th>Girl</th> <td>GB</td> <td>GG</td> </tr> </table> <p>Two boys after each other (BB) is 1 of 4 possible outcomes, so the probability of two boys is 1 out of 4, or 25%.</p> <p>How does this probability change if you ask what is the probability of giving birth to three boys after each other? A tree diagram can then be used:</p> 			2nd birth		Boy	Girl	1st birth	Boy	BB	BG	Girl	GB	GG	Total time for probability: 4,5 hours
		2nd birth															
		Boy	Girl														
1st birth	Boy	BB	BG														
	Girl	GB	GG														

CONTENT AREA	TOPICS	CONCEPTS AND SKILLS	SOME CLARIFICATION NOTES OR TEACHING GUIDELINES	DURATION (in hours)
	<b>5.4</b> Probability		<p><b>Total outcomes 8</b></p> <p>Three boys after each other, [BBB], is 1 out 8 of possible outcomes, hence the probability of three boys after each other is <math>\frac{1}{8}</math> or 12.5%.</p>	<p>Total time for revision/assessment for the term</p> <p>12 hours</p>

**REVISION/ASSESSMENT:**

At this stage learners should have been assessed on:

- transformation geometry
- geometry of 3D objects
- collecting, organizing, representing, analysing, summarizing, interpreting and reporting data
- probability

## SECTION 4: ASSESSMENT

### 4.1 INTRODUCTION

Assessment is a continuous planned process of identifying, gathering and interpreting information regarding the performance of learners, using various forms of assessment. It involves four steps: generating and collecting evidence of achievement; evaluating this evidence; recording the findings and using this information to understand and thereby assist the learner's development in order to improve the process of learning and teaching. Assessment should be both informal and formal. In both cases regular feedback should be provided to learners to enhance their learning experience. This will assist the learner to achieve the minimum performance level of 40% to 49% required in Mathematics for promotion purposes.

### 4.2 TYPES OF ASSESSMENT

The following types of assessment are very useful in Mathematics; as a result teachers are encouraged to use them to serve the purpose associated with each.

**Baseline assessment:** Mathematics teachers who might want to establish whether their learners meet the basic skills and knowledge levels required to learn a specific Mathematics topic will use baseline assessment. Knowing learners' level of proficiency in a particular Mathematics topic enables the teacher to plan her/his Mathematics lesson appropriately and to pitch it at the appropriate level. Baseline assessment, as the name suggests, should therefore be administered prior to teaching a particular Mathematics topic. The results of the baseline assessment should not be used for promotion purposes.

**Diagnostic assessment:** It is not intended for promotion purposes but to inform the teacher about the learner's Mathematics problem areas that have the potential to hinder performance. Two broad areas form the basis of diagnostic assessment: content-related challenges where learners find certain difficulties to comprehend, and psycho-social factors such as negative attitudes, Mathematics anxiety, poor study habits, poor problem-solving behaviour, etc. Appropriate interventions should be implemented to assist learners in overcoming these challenges early in their school careers.

**Formative assessment:** Formative assessment is used to aid the teaching and learning processes, hence assessment **for** learning. It is the most commonly used type of assessment because it can be used in different forms at any time during a Mathematics lesson, e.g. short class works during or at the end of each lesson, verbal questioning during the lesson. It is mainly informal and should not be used for promotion purposes. The fundamental distinguishing characteristic of formative assessment is constant feedback to learners, particularly with regard to learners' learning processes. The information provided by formative assessment can also be used by teachers to inform their methods of teaching.

**Summative assessment:** Contrary to the character of formative assessment, summative assessment is carried out after the completion of a Mathematics topic or a cluster of related topics. It is therefore referred to as assessment **of** learning since it is mainly focusing on the product of learning. The results of summative assessment are recorded and used for promotion purposes. The forms of assessment presented in Table 4.1 are examples of summative assessment.

#### 4.3 INFORMAL OR DAILY ASSESSMENT

Assessment for learning has the purpose of continuously collecting information on learner performance that can be used to improve their learning.

Informal assessment is a daily monitoring of learners' progress. This is done through observations, discussions, practical demonstrations, learner-teacher conferences, informal classroom interactions, etc. Informal assessment may be as simple as stopping during the lesson to observe learners or to discuss with learners how learning is progressing. Informal assessment should be used to provide feedback to learners and to inform planning for teaching, but need not be recorded. It should not be seen as separate from the learning activities taking place in the classroom.

Self-assessment and peer assessment actively allow learners to assess themselves. This is important as it allows learners to learn from, and reflect on their own performance. The results of the informal daily assessment tasks are not formally recorded unless the teacher wishes to do so. The results of daily assessment tasks are not taken into account for promotion purposes.

#### 4.4 FORMAL ASSESSMENT

Formal assessment comprises School-Based Assessment (SBA) and End of the Year Examination. Formal assessment tasks are marked and formally recorded by the teacher for promotion purposes. All Formal Assessment tasks are subject to moderation for the purpose of quality assurance and to ensure that appropriate standards are maintained. The SBA component may take various forms. However, **tests, examinations, projects, assignments and investigations** are recommended for Mathematics. The Senior Phase Mathematics minimum formal programme of assessment tasks are outlined in Table 4.1

**Table 4.1: Minimum requirements for formal assessment: Senior Phase Mathematics**

	Forms of Assessment	Minimum Requirements per term				Number of Tasks per Year	Weighting
		Term 1	Term 2	Term 3	Term 4		
<b>SBA</b>	Test	1	1	1		3	40%
	Examination		1			1	
	Assignment	1		1	1	3	
	Investigation		1		1	2	
	Project			1		1	
	<b>Total</b>	<b>2</b>	<b>3</b>	<b>3</b>	<b>2</b>	<b>10*</b>	
<b>End of the year Examination</b>						1	<b>60%</b>

\*To be completed before the End of the year Examination

**Tests** and **examinations** are individualised assessment tasks and should be carefully designed to ensure that learners demonstrate their full potential in Mathematics content. The questions should be carefully spread to cater for different cognitive levels of learners. Tests and examinations are predominantly assessed using a memorandum.

The **Assignment**, as is the case with tests and examinations, is mainly an individualised task. It can be a collection of past questions, but should focus on more demanding work as any resource material can be used, which is not the case in a task that is done in class under supervision.

**Projects** are used to assess a range of skills and competencies. Through projects, learners are able to demonstrate their understanding of different Mathematics concepts and apply them in real-life situations. Caution should, however, be exercised not to give projects that are above learners' cognitive levels. The assessment criteria should be clearly indicated on the project specification and should focus on the Mathematics involved and not on duplicated pictures and facts copied from reference material. Good projects contain the collection and display of real data, followed by deductions that can be substantiated.

**Investigation** promotes critical and creative thinking. It can be used to discover rules or concepts and may involve inductive reasoning, identifying or testing patterns or relationships, drawing conclusions, and establishing general trends. To avoid having to assess work which is copied without understanding, it is recommended that whilst initial investigation could be done at home, the final write-up should be done in class, under supervision, without access to any notes. Investigations are assessed with rubrics, which can be specific to the task, or generic, listing the number of marks awarded for each skill. These skills include:

- organizing and recording ideas and discoveries using, for example, diagrams and tables.
- communicating ideas with appropriate explanations
- calculations showing clear understanding of mathematical concepts and procedures.
- generalizing and drawing conclusions,

The forms of assessment used should be appropriate to the age and cognitive level of learners. The design of these tasks should cover the content of the subject and designed to achieve the broad aims of the subject. Appropriate instruments, such as rubrics and memoranda, should be used for marking. Formal assessments should cater for a range of cognitive levels and abilities of learners as shown in Table 4.2:

**Table 4.2: Cognitive levels**

DESCRIPTION AND EXAMPLES OF COGNITIVE LEVELS		
Cognitive levels	Description of skills to be demonstrated	Examples
<b>Knowledge</b> (≈25%)	<ul style="list-style-type: none"> <li>Estimation and appropriate rounding of numbers</li> <li>Straight recall</li> <li>Identification and direct use of correct formula</li> <li>Use of mathematical facts</li> <li>Appropriate use of mathematical vocabulary</li> </ul>	<ol style="list-style-type: none"> <li>Estimate the answer and then calculate with a calculator: <math>\frac{62}{325} + \frac{816}{279}</math> [Grade 7]</li> <li>Use the formula <math>A = \pi r^2</math> to calculate the area of a circle if the diameter is equal to 10 cm. [Grade 8]</li> <li>Write down the y-intercept of the function <math>y = 2x + 1</math> [Grade 9]</li> </ol>
<b>Routine procedures</b> (≈45%)	<ul style="list-style-type: none"> <li>Perform well-known procedures</li> <li>Simple applications and calculations which might involve many steps</li> <li>Derivation from given information may be involved</li> <li>Identification and use (after changing the subject) of correct formula</li> <li>Generally similar to those encountered in class</li> </ul>	<ol style="list-style-type: none"> <li>Determine the mean of 5 Grade 7 learners' marks if they have respectively achieved 25; 40; 21; 85; 14 out of 50. [Grade 7]</li> <li>Solve <math>x</math> in <math>x - 6 = 9</math> [Grade 8]</li> <li>R600 invested at <math>r\%</math> per annum for a period of 3 years yields R150 interest. Calculate the value of <math>r</math> if <math>SI = \frac{Pnr}{100}</math>. [Grade 9]</li> </ol>
<b>Complex procedures</b> (≈20%)	<ul style="list-style-type: none"> <li>Problems involving complex calculations and/or higher order reasoning</li> <li>Investigate elementary axioms to generalize them into proofs for straight line geometry, congruence and similarity</li> <li>No obvious route to the solution</li> <li>Problems not necessarily based on real world contexts</li> <li>Making significant connections between different representations</li> <li>Require conceptual understanding</li> </ul>	<ol style="list-style-type: none"> <li>Mr Mnisi pays R75 for a book which he marks up to provide 20% profit. He then sells it for cash at 4% discount. Calculate the selling price. [Grade 7]</li> <li>A car travelling at a constant speed travels 60 km in 18 minutes. How far, travelling at the same constant speed, will the car travel in 1 hour 12 minutes? [Grade 8]</li> <li>Use investigation skills to prove that the angles on a straight line are supplementary. [Grade 9]</li> </ol>
<b>Problem solving</b> (≈10%)	<ul style="list-style-type: none"> <li>Unseen, non-routine problems (which are not necessarily difficult)</li> <li>Higher order understanding and processes are often involved</li> <li>Might require the ability to break the problem down into its constituent parts</li> </ul>	<ol style="list-style-type: none"> <li>The sum of three consecutive numbers is 87. Find the numbers. [Grade 7]</li> <li>Mary travels a distance of km in 6 hours if she travels at an average speed of 20 km/h on her bicycle. What should be her average speed if she wants to cover the same distance in 5 hours? [Grade 8]</li> <li>The combined age of a father and son is 84 years old. In 6 years time the father will be twice as old as the son was 3 years ago. How old are they now? [Grade 9]</li> </ol>

## 4.5 RECORDING AND REPORTING

Recording is a process in which the teacher documents the level of a learner's performance in a specific assessment task. It indicates the learner's progress towards the achievement of the knowledge as prescribed in the National Curriculum and Assessment Policy Statements. Records of learner performance should provide evidence of the learner's conceptual progression within a grade and her/his readiness to be promoted to the next grade. Records of learner performance should also be used to verify the progress made by teachers and learners in the teaching and learning process.

Reporting is a process of communicating learner performance to learners, parents, schools, and other stakeholders. Primary schooling is a critical period for the acquisition of foundational Mathematics skills and conceptual knowledge. Reporting of learner performance is therefore essential and should not be limited to the quarterly report card. Other methods of reporting should be explored, e.g. parents' meetings, school visitation days, parent-teacher conferences, phone calls, letters. These extreme, but worthwhile modalities will ensure that any underperformance is communicated promptly and appropriate measures of intervention are implemented collaboratively by teachers and parents. Formal reporting is done on a 7-point rating scale (see Table 4.3)

**Table 4.3: Scale of achievement for the National Curriculum Statement Grades 7 - 9**

RATING CODE	DESCRIPTION OF COMPETENCE	PERCENTAGE
7	Outstanding achievement	80 – 100
6	Meritorious achievement	70 – 79
5	Substantial achievement	60 – 69
4	Adequate achievement	50 – 59
3	Moderate achievement	40 – 49
2	Elementary achievement	30 – 39
1	Not achieved	0 – 29

## 4.6 MODERATION OF ASSESSMENT

Moderation refers to the process that ensures that the assessment tasks are fair, valid and reliable. Moderation should be carried out internally at school and/or externally at district, provincial and national levels. Given that the promotion of learners in the Senior Phase is largely dependent upon the SBA (which contributes 40%); the moderation process should be intensified to ensure that:

- learners are not disadvantaged by the invalid and unreliable assessment tasks,
- quality assessment is given and high but achievable standards are maintained.

## 4.7 GENERAL

This document should be read in conjunction with:

4.7.1 *National policy pertaining to the programme and promotion requirements of the National Curriculum Statement Grades R-12; and*

4.7.2 *National Protocol for Assessment Grades R-12.*
