2021 National ATP: Grade - Term 1: MATHEMATICS GRADE 11

| TERM 1 | Week $1 \quad$ Week 2 | Week 3 | Week 4 | Week 5 | Week 6 | Week 7 | Week 8 | Week 9 | Week 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Topics | Exponents and surds | Equations and inequalities |  |  | Euclidean Geometry |  |  | Trigonometry (reduction formulae, graphs, equations) |  |
|  | 1. Simplify expressions and solve equations using the laws of exponents for rational exponents where $0 ; q>0 \quad x^{\frac{p}{q}}=\sqrt[q]{x^{p}} ; x>$ <br> 2. Add, subtract, multiply and divide simple surds. <br> 3. Solve simple equations involving surds. | 1. Complete the square <br> 2. Solve Quadratic equations (by factorization and by using the quadratic formula) <br> 3. Solve Quadratic inequalities in one unknown (Interpret solutions graphically.) <br> NB: It is recommended that the solving of equations in two unknowns is important to be used in other equations like hyperbola-straight line as this is normal in the case of graphs <br> 4. Equations in two unknowns, one of which is linear and the other quadratic <br> 5. Nature of roots |  |  | Accept results established in earlier grades as axioms and also that a tangent to a circle is perpendicular to the radius, drawn to the point of contact. Then investigate and prove the theorems of the geometry of circles: <br> - The line drawn from the centre of a circle perpendicular to a chord bisects the chord; <br> - The perpendicular bisector of a chord passes through the centre of the circle; <br> - The angle subtended by an arc at the centre of a circle is double the size of the angle subtended by the same arc at the circle (on the same side of the chord as the centre); <br> - Angles subtended by a chord of the circle, on the same side of the chord, are equal; <br> - The opposite angles of a cyclic quadrilateral are supplementary; <br> - Two tangents drawn to a circle from the same point outside the circle are equal in length; <br> - The angle between the tangent to a circle and the chord drawn from the point of contact is equal to the angle in the alternate segment. <br> Use the above theorems and their converses, where they exist, to solve riders. |  |  | 1. Derive and use the identities: $\tan \theta=\frac{\sin \theta}{\cos \theta}$ $\theta \neq k .90^{\circ}, k$ an odd integer; and $\sin ^{2} \theta+\cos ^{2} \theta=1$. <br> 2. Derive and use reduction formulae to simplify the following expressions: <br> 2.1. $\sin \left(90^{\circ} \pm \theta\right) ; \cos \left(90^{\circ} \pm \theta\right)$; <br> 2.2. $\sin \left(180^{\circ} \pm \theta\right) ; \cos \left(180^{\circ} \pm \theta\right)$ and $\tan \left(180^{\circ} \pm \theta\right)$; <br> 2.3. $\sin \left(360^{\circ} \pm \theta\right) ; \cos \left(360^{\circ} \pm \theta\right)$ and $\tan \left(360^{\circ} \pm \theta\right)$; <br> 2.4. $\sin (-\theta) ; \cos (-\theta)$ and $\tan (-\theta)$; <br> 3.Determine for which values of a variable an identity holds. |  |
| SBA | Investigation or project ${ }^{\text {a }}$ |  |  |  | Test |  |  |  |  |

2021 National ATP: Grade Éferm 2:MATHEMATICS GRADE 11

| TERM 2 | Week 1 | Week 2 | Week 3 | Week 4 | Week 5 | Week 6 | Week 7 | Week 8 | Week 9 | Week 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Topics | Trig - equations | Analytical Geometry |  |  | Number patterns |  | Functions |  |  |  |
|  | 4. Determine the general solutions of trigonometric equations. Also, determine solutions in specific intervals | Revise <br> 1. distance between the two points; <br> 2. gradient of the line segment connecting the two points (and from that identify parallel and perpendicular lines); and <br> 3. Coordinates of the mid-point of the line segment joining the two points. <br> Derive and apply: <br> 1. the equation of a line through two given points; <br> 2.the equation of a line through one point and parallel or perpendicular to a given line; and <br> 3.The inclination $(\theta)$ of a line, where $m=\tan \theta$ is the gradient of the line ( $0^{\circ} \leq \theta \leq 180^{\circ}$ ) |  |  | Patterns: Investigate number patterns leading to those where there is a constant second difference between consecutive terms, and the general term is therefore quadratic. |  | 1.Revise the effect of the parameters $a$ and $q$ and investigate the effect of $p$ on the graphs of the functions defined by: $\begin{array}{ll} \text { 1.1. } & y=f(x)=a(x+p)^{2}+q \\ \text { 1.2. } & y=f(x)=\frac{a}{x+p}+q \\ \text { 1.3. } & y=f(x)=a . b^{x+p}+q \text { where } b>0, b \neq 1 \end{array}$ <br> 2. Investigate numerically the average gradient between two points on a curve and develop an intuitive understanding of the concept of the gradient of a curve at a point. <br> 3.Point by point plotting of basic graphs defined by $y=\sin \theta, y=\cos \theta$ and $y=\tan \theta$ for $\theta \in\left[-360^{\circ} ; 360^{\circ}\right]$ <br> 4. Investigate the effect of the parameter $k$ on the graphs of the functions defined by $y=\sin (k x)$, <br> $y=\cos (k x)$ and $y=\tan (k x)$ <br> 5. Investigate the effect of the parameter $p$ on the graphs of the functions defined by $\begin{aligned} & y=\sin (x+p), \\ & y=\cos (x+p) \text { and } y=\tan (x+p) \end{aligned}$ <br> 6. Draw sketch graphs defined by: $\begin{aligned} & y=a \sin \mathrm{k}(x+p), \\ & y=a \cos \mathrm{k}(x+p) \text { and } \\ & y=a \tan k(x+p) \text { at most two parameters at a time. } \end{aligned}$ |  |  |  |
| SBA | Assignment $\square^{\text {a }}$ Test |  |  |  |  |  |  |  |  |  |

| TERM 3 | Week 1 | Week 2 | Week 3 | Week 4 | Week 5 | Week 6 | Week 7 | Week 8 | Week 9 | Week 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Topics | Trigonometry (sine, cosine and area rules) |  |  | Measurement |  | Statistics |  |  | Probability |  |
|  | 1. Prove and apply the sine, cosine and area rules. <br> 2. Solve problems in two dimensions using the sine, cosine and area rules. |  |  | - Revise the volume and surface areas of right-prisms and cylinders. <br> - Study the effect on volume and surface areas when multiplying any dimension by a constant factor $k$. Calculate volume and surface areas of spheres, right prisms, right cones and combination of those objects (figures). |  | 1. Revise measures of central tendency in ungrouped data. <br> 2. Measures of central tendency in grouped data: calculation of mean estimate of grouped and ungrouped data and identification of modal interval and interval in which the median lies. <br> 3. Revision of range as a measure of dispersion and extension to include percentiles, quartiles, inter-quartile and semi-interquartile range. <br> 4. Five number summary (maximum, minimum and quartiles) and box and whisker diagram. <br> 5. Use the statistical summaries (measures of central tendency and dispersion), and graphs to analyse and make meaningful comments on the context associated with the given data. <br> 6. Histograms <br> 7.Frequency polygons <br> 8. Ogives (cumulative frequency curves) <br> 9.Variance and standard deviation of ungrouped data <br> 10.Symmetric and skewed data <br> 11. Identification of outliers. |  |  | 1. The use of probability models to compare the relative frequency of events with the theoretical probability. <br> 2. The use of Venn diagrams to solve probability problems, deriving and applying the following for any two events in a sample space S : $\begin{aligned} P(A \text { or } B)= & P(A)+P(B) \\ & -P(A \text { and } B) \end{aligned}$ <br> A and B are Mutually exclusive if $P(A$ and $B)=0$; <br> A and B are complementary if they are mutually exclusive; and $P(A)+P(B)=1$ <br> Then $P(B)=P(\operatorname{not}(A))=1-P(A)$ <br> 3.Revised the addition rule for mutually exclusive events: <br> $P(A$ or $B)=P A+P(B)$ <br> The complementary rule: <br> $P($ not $A)=1-P(A)$ and the identity <br> $P(A$ or $B)=P(A)+P(B)-P(A$ and $B)$ <br> 4.Identify dependents and independents events and the product rule for independent events: <br> $P(A$ and $B)=P(A) \times P(B)$ <br> 5.The use of Venn diagrams to solve probability problems, deriving and applying formulae for any three events $\mathrm{A}, \mathrm{B}$ and C in a sample space S . <br> 6.Use tree diagrams for the probability of consecutive or <br> simultaneous events which are not necessarily independent |  |
