## CONTINUOUS PROBABILITY DISTRIBUTION

This is a distribution which takes on any value within a given interval.

## Summary:

A probability density function ( $\mathbf{p} \square \mathbf{d} \square \mathbf{f}$ ) is a function that defines the probability of an event to occur.

A continuous $\mathrm{p} \square \mathrm{d} \square \mathrm{f} f(x)$ defined over the interval $\mathbf{a} \square \mathbf{x} \square$ bis such that:
(a) The total area under $f(x)=$ sum of all probabilities $=\mathbf{1}$.
b
$\square \square \square_{f(x)}$ dx 1. a $\quad \mathbf{x}_{2}$
(b) $\mathbf{P}\left({ }^{\mathbf{X}}{ }_{1} \square X \square^{\mathbf{x}_{2}}\right) \square \square f(x) d \mathbf{d} . \mathbf{x}_{1}$

NOTE:
(i) The values of $\mathbf{P}\left({ }_{\mathbf{X}}^{\mathbf{1}} \square \mathbf{X} \square^{\mathbf{X}}{ }_{\mathbf{2}}\right), \mathbf{P}\left({ }^{\mathbf{X}}{ }_{1} \square \mathbf{X} \square{ }^{\mathbf{X}} \mathbf{2}\right), \mathbf{P}\left(\mathbf{X}_{\mathbf{1}} \square \mathbf{X} \square^{\mathbf{X}}{ }_{\mathbf{2}}\right)$ and

(ii) The values $\mathbf{P}\left(\mathbf{X} \square^{\mathbf{X}}{ }_{1}\right) \square \mathbf{P}\left(\mathbf{X} \square^{\mathbf{x}}{ }_{\mathbf{2}}\right) \square \mathbf{0}$ since $\mathbf{X}$ deals with a range of values b
(c) Expectation, $\mathbf{E}(\mathbf{X}) \square \quad \square \mathbf{a}^{x f(x)} \mathbf{d x} \cdot$
(d) Variance, $\operatorname{Var}(\mathbf{X}) \square \mathbf{E}\left(\mathbf{X}^{\mathbf{2}}\right) \square \mathbf{E}^{\mathbf{2}}(\mathbf{X})$.
b
where $\mathbf{E}\left(\mathbf{X}^{2}\right) \square \square x^{2 f(x)} \mathbf{d x}, \quad \mathbf{E}^{2}(\mathbf{X}) \square \square \mathbf{E}(\mathbf{X}) \square^{2}$.
(e) Standard deviation $\boldsymbol{\sigma} \quad \square \sqrt{\text { ariance }}$
(f) For a continuous $r \square v \mathbf{X}$ and constants $\mathbf{a}$ and $\mathbf{b}$,

| (i) $\mathbf{E}(\mathbf{a})=\mathbf{a}$ | $\operatorname{Var}(\mathbf{a})=\mathbf{0}$ |
| :--- | :--- |
| (ii) $\mathbf{E}(\mathbf{a X})=\mathbf{a E}(\mathbf{X})$ | $\operatorname{Var}(\mathbf{a X})=\mathbf{a}^{2} \operatorname{Var}(\mathbf{X})$ |
| (iii) $\mathbf{E}(\mathbf{a X}+\mathbf{b})=\mathbf{a E}(\mathbf{X})+\mathbf{b}$ | $\operatorname{Var}(\mathbf{a X}+\mathbf{b})=\mathbf{a}^{2} \operatorname{Var}(\mathbf{X})$ |

m
(g) Median is the value $\mathbf{m}$ which satisfies the relation $\square^{f(x)} \mathbf{d x} \square 0 \square 5$. a I $\square \mathbf{e}$ The median encloses an area of $\mathbf{0} \mathbf{5}$ below it. q1
(h) Lower quartile is the value $\mathbf{q}_{1}$ which satisfies the relation $\square^{f(x)} \mathbf{d x} \square$ 0ㄴ25. a
IDe The lower quartile encloses an area of $\mathbf{0} \mathbf{2 5}$ below it.
q3
(I) Upper quartile is the value $\mathbf{q}_{3}$ which satisfies the relation $\square^{f(x)} \mathbf{d x} \square 0 \square 75$.
a
I $\square \mathbf{e}$ The upper quartile encloses an area of $\mathbf{0} \mathbf{0 7 5}$ below it.
(j) Interquartile range $=\mathbf{Q 3}_{\square} \mathbf{Q 1}$
(k) The $\mathbf{J}^{\text {th }}$ percentile is the value $\mathbf{p}$ that satisfies the relation $\square^{f(x)} \mathbf{d x} \square \mathbf{1 0 0} \mathbf{J}$

- $\mathbf{a}$

NOTE: The median, quartiles and percentiles of a p $\square \mathrm{d} \square \mathrm{f}$ defined over different intervals are obtained by first investigating the interval in which they are located.
(L) The graph of the $\mathrm{p} \square \mathrm{d} \square \mathrm{f} f(x)$ can either be linear or a curve.
(m) Mode is value of $\mathbf{x}$ at which the $\mathrm{p} \square \mathrm{d} \square \mathrm{f} f(\boldsymbol{x})$ attains its maximum value.

The graph of $f(x)$ gives the location of the mode. If the $\mathrm{p} \operatorname{Dd} \operatorname{ff} f(x)$ is non linear, the value $\mathbf{x}$ at which $f(x)$ has a maximum value occurs when $f^{1}(x) \square$

## 0

provided $f^{11}(\boldsymbol{x}) \square \mathbf{0}$.

## EXAMPLES:

1. The $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of a continuous $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is given by:

$$
\begin{gathered}
\square \boldsymbol{\beta x} \quad, \quad \mathbf{0} \square \mathbf{x} \square \mathbf{1} \\
f(x) \square \square_{\square-}^{1} \boldsymbol{\beta}(\mathbf{3} \square \mathbf{x}), \mathbf{1} \square \mathbf{x} \square \mathbf{3} \square_{\square} \mathbf{0} \\
\text { otherwise }
\end{gathered}
$$

$\square 2$
Find:
(i) the value of $\mathrm{\square}$
(ii) $\mathbf{P}(\mathbf{X} \square 2)$
(iii) $\mathbf{P}(\mathbf{X} \square 2)$
(iv) $P(X \quad 1 \square 4)$
(v) $\mathbf{P}(0 \square 8 \square X \square 2)$
(vi) $\mathbf{P}(X \subset 1 \mid \square 0 \square 6)$
(vii) $P(X \subset 1 \mid 0 \square 6)$
(viii) $\mathbf{P}(0 \square 2 \square X \quad 2 \square 5 / X \quad \square 0 \square 7)$
(ix) the mode, mean and standard deviation of $\mathbf{X}$.
(x) $\quad \mathbf{E}(\mathbf{3 X}+5)$
(xi) $\quad \operatorname{Var}(3 X+5)$
(xii) the median and semi-interquartile range of $\mathbf{X}$. (xiii) the value of $\mathbf{b}$ such that $\mathbf{P}(\mathbf{X}$
b) $=06 . \square \square$
(xiv) the $\mathbf{3 0}^{\text {th }}$ to $\mathbf{8 0}{ }^{\text {th }}$ percentile range of $\mathbf{X}$.
2. The $\mathrm{p} \square \mathrm{d} \square f(\boldsymbol{f}(\boldsymbol{x})$ of a $\mathbf{r} \square \mathbf{v} \mathbf{X}$ takes on the form shown in the sketch below:

Find the:
(i) value of $\square$
(ii) equations of the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$
(iii) $\mathbf{P}(\mathbf{0} 5<\mathbf{X} 2) \square$
(iv) mean of $\mathbf{X}$.
(v) median of $\mathbf{X}$.
3. The $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of a continuous $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is such that:

$$
\begin{gathered}
f(x) \square \square \square \mathrm{Qx}(6 \square \mathbf{x})^{2}, \quad \mathbf{0} \square \mathbf{x} \square \mathbf{~} 6 \square \mathbf{0} \\
\text { otherwise }
\end{gathered}
$$

Find the:
(i) value of $\square$
(ii) mode of $\mathbf{X}$
(iii) mean of $\mathbf{X}$
4. The outputs of $\mathbf{9}$ machines in a factory are independent random variables each with probability density function given by

$$
\begin{aligned}
& \square \beta \mathbf{x} \quad, \quad 0 \square \mathbf{x} \square 10 \\
& f(x) \square{ }^{\square}{ }_{\square} \boldsymbol{\beta}(\mathbf{2 0} \square \mathbf{x}), \quad \mathbf{1 0 \square \mathbf { x } \square} \\
& 20 \\
& { }^{\circ} \mathrm{O} \text { 0 , otherwise }
\end{aligned}
$$

Find the:
(i) value of $\square$.
(ii) expected value and variance of the output of each machine.

Hence or otherwise find the expected value and variance of the total output from all machines.
5. The mass $\mathbf{X ~ k g}$ of maize flour produced per hour is modeled by a continuous $r \square \mathrm{v}$ whose $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ is given by:

(a) Sketch the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$. Hence state the mode of $\mathbf{X}$
(b) Find the:
(i) value of $\boldsymbol{\beta}$
(ii) $\mathbf{P}\left(\begin{array}{lll}\mathbf{X} & 3 & 2\end{array}\right) \square$
(iii) mean mass produced per hour
(c) Given that maize flour is sold at sh 2400 per kg and the cost of running the production is $\mathbf{s h} \mathbf{2 0 0}$ per hour, taking shs $\mathbf{Y}$ as the profit made hour.
(i) Express $\mathbf{Y}$ in terms of $\mathbf{X}$.
(ii) Find the expected value of $\mathbf{Y}$.
6. A $\mathrm{r} \square \mathrm{v} \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$

$$
\begin{aligned}
& \square \beta \mathbf{x} \quad, \quad 1 \square \mathbf{x} \square 3 f(x) \\
& \square \square_{\square} \lambda(4 \square x) \text {, } 3 \square x \square 4 \square_{\square \square} 0 \\
& \text {, otherwise }
\end{aligned}
$$

(a) Show that $\lambda \square 3 \boldsymbol{\beta}$.
(b) Find :
(i) the values of $\boldsymbol{\beta}$ and $\boldsymbol{\lambda}$
(ii) the mean and variance of $\mathbf{X}$
(iii) the median of $\mathbf{X}$
(iv) $\mathbf{P}(\mathbf{3} \square \mathbf{X} \square \mathbf{4} / \mathbf{X} \square \mathbf{2})$
7. A r $\square \mathrm{v} \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$.

$$
\begin{array}{cl}
\square \underline{2}(x \square 1) & , \quad 0 \square x \square a \\
& 013 \\
f(x) \square \square \square 13^{\underline{2}}(5 \square x) & , \text { a } \square x \square b \\
\square & , \text { otherwise }
\end{array}
$$

Find the:
(i) values of $\mathbf{a}$ and $\mathbf{b}$.
(ii) median of $\mathbf{X}$.
(iii) $\mathbf{P}\left(\begin{array}{lllll}\mathbf{X} & 05025 & \mathbf{X} & 1\end{array}\right) \square$ 마

## CUMULATIVE DISTRIBUTION FUNCTION $\boldsymbol{F}(\boldsymbol{x})$

This function gives the accumulated probability up to $\mathbf{x}$. It is obtained by
$\mathbf{x}$
integrating the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ as follows: $\mathbf{F}(\mathbf{x}) \square \mathbf{P}(\mathbf{X} \square \mathbf{x}) \square \square f(t) \mathbf{d t}$. ㅁ

The cumulative distribution function is sometimes known as a distribution function

## PROPERTIES OF $\boldsymbol{F}(\boldsymbol{x})$

(i) $\mathbf{F}(\mathbf{x})$ must be defined over the interval $\square \square \square \mathbf{x} \square \square$.
(ii) $0 \square \mathbf{F}(\mathbf{x}) \square \mathbf{1}$, for all values of $\mathbf{x}$.
(iii) $\mathbf{P}\left({ }_{1}{ }_{1} \square X \square{ }^{\mathbf{X}}{ }_{2}\right) \square P\left(X \square{ }^{\mathbf{X}}{ }_{2}\right) \square P\left(X \square{ }^{\mathbf{X}}{ }_{1}\right) \square F\left({ }^{\mathbf{X}}{ }_{2}\right) \square F\left({ }^{\mathbf{X}}{ }_{1}\right)$
(iv) The median, $m$, lower quartile, $\mathbf{q}_{1}$, and upper quartile $\mathbf{q}_{\mathbf{3}}$ are the values for which $\mathbf{F}(\mathbf{m}) \square \frac{1}{2}, F\left(\mathbf{q}_{1}\right) \square \underline{14}$ and $\mathbf{F}\left(\mathbf{q}_{\mathbf{2}}\right) \square 4 \underline{3}$ respectively. (v) $\mathbf{P}(\mathbf{X} \square \mathbf{x}) \square \mathbf{P}(\mathbf{X} \square \mathbf{x}) \square \mathbf{1}$
$\square$ The complementary cumulative distribution function

$$
\mathbf{P}(\mathbf{X} \square \mathbf{x}) \square \mathbf{1} \square \mathbf{P}(\mathbf{X} \square \mathbf{x})=\mathbf{1} \square \mathbf{F}(\mathbf{x})(\mathbf{v i}) \text { The } \mathrm{p} \square \mathrm{~d} \square f f(x) \text { can be }
$$

obtained by differentiating the cumulative distribution
$\square \quad F^{1}(x) \square \mathrm{p} \square \mathrm{d} \square \mathrm{f} f(x)$

## EXAMPLES:

1. The $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of a continuous $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is given by: $\square \boldsymbol{\beta}(\mathbf{x} \square$
1) , $1 \square \mathbf{x} \square \square$

$\square_{\square} 0 \quad$, otherwise
$\square 2$
Find:
(i) the value of $\square$, hence $f(x)$
(ii) the cumulative distribution function $\mathbf{F}(\mathbf{x})$ and sketch it.
(iii) $\mathbf{P}(\mathbf{2} \square 8 \quad \mathrm{X} \square 5 \square 2)$
(iv) $\mathbf{P}(\mathbf{X} \square 4)$
(v) the median of $\mathbf{X}$.
(vi) the interquartile range of X
(vii) the $\mathbf{2 0}^{\text {th }}$ percentile of $\mathbf{X}$.

## Solution:

(ii) Note: $\mathbf{F}(\mathbf{x})$ is concave up parabola over the interval $1 \square \mathbf{x} \square$ 3and concave down parabola over the interval $3 \square \mathbf{x} \square$.
2. A continuous $\mathrm{r} \square \mathrm{v} \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$.
$\square k(3 \square x) \quad, \quad 1 \square x \square 2$
$f(x)$ प $\boldsymbol{k} \quad, 2$
$\square \mathrm{x} \quad 3$

(a) Sketch $f(x)$, hence deduce the mean and median of $\mathbf{X}$.
(b) Find:
(i) the value of $\boldsymbol{k}$.
(ii) the cumulative distribution function $\mathbf{F}(\mathbf{x})$ and sketch it.
(iii) $\mathbf{P}(X \quad \square 3 \square 5 / 3 \square X \square 4)$
3. The distribution function of a continuous $\mathbf{r} \square \mathbf{v} \boldsymbol{X}$ is as follows:

$$
\begin{aligned}
& \square 0 \quad, \quad x \square 1 \\
& { }_{\square} \frac{1}{(x \square 1)^{2}} \quad, \quad 1 \square x \square 3
\end{aligned}
$$

$$
\begin{aligned}
& \square_{\square} \quad 1 \quad, \quad x \square 7
\end{aligned}
$$

## Find:

(i) the values of $\boldsymbol{\beta}$ and $\boldsymbol{\lambda}$
(ii) $P(X \square 4)$
(iii) the median of $\boldsymbol{X}$
(iii) the $p \square d \square f$ of $\boldsymbol{X}$
(iv) the mean, $\boldsymbol{\mu}$ of the distribution
(v) $\boldsymbol{P}(|X \square \mu| \square 0 \square 8)$
4. The cumulative distribution of a continuous $\mathbf{r} \square \mathbf{v}$ is such that:

Find:
(i) the values of $\square$ and $\square$, hence sketch $\mathbf{F}(\mathbf{x})$.
(ii) $\mathbf{P}(|\boldsymbol{X} \square 0 \square 375| \square 0 \square 25)$
(iii) the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$ and sketch it, hence deduce the mean and median of $\mathbf{X}$.
5. A continuous $r \square v \mathbf{X}$ is distributed as follows:

$$
\mathbf{P}(\mathbf{X}>) \quad \mathbf{x} \square \mathbf{a}+\mathbf{b} \mathbf{x}^{\mathbf{3}}, \quad \mathbf{0} \quad \mathbf{x} \quad \square \square \mathbf{4}
$$

(i) By first finding the cumulative distribution of $\mathbf{X}$ or otherwise, find the values of $\mathbf{a}$ and $\mathbf{b}$.
(ii) Show that $\mathbf{E}(\mathbf{X})=\mathbf{3}$, and find the standard deviation $\square$ of $\mathbf{X}$.

## UNIFORM DISTRIBUTION

This distribution is sometimes called a rectangular distribution.

## Summary:

If a $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is uniformly distributed over the interval $\square \mathbf{a}, \mathbf{b} \square$, then:

(i) the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$ is given by: $\boldsymbol{f ( x )}$
(ii) the mean of $\mathbf{X}$ is $\underline{\mathbf{a}} \underline{\mathbf{b}}$.
(iii) the variance of $\mathbf{X}$ is $\underline{(\mathbf{b}} \underline{\square}$.

$$
\underline{\mathbf{a}}^{\square \underline{\mathbf{b}}}
$$

(iv) the median of $\mathbf{X}$ is 2
(v) the graph of $f(x)$ is as follows:

$$
f(x)
$$

EXAMPLES:

1. A $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is uniformly distributed over the interval $\square \mathbf{a}, \mathbf{b} \square$.
(a) State the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$ and sketch it.
(b) Show that:
(i) the mean of $\mathbf{X}$ is $\underline{\mathbf{a}} \underline{\mathbf{b}}$.
(ii) the variance of $\mathbf{X}$ is $\underline{(\mathbf{b} \quad \square \mathbf{a}) 2}$.

12
(iii) the median of $\mathbf{X}$ is $\underline{\mathbf{a}}$.

2
(c) Find the cumulative distribution function of $\mathbf{X}$ and sketch it.
2. (a) A $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is uniformly distributed over the interval $\square 2,5 \square$. Find

(b) The number of vehicles crossing a roundabout take on a $\mathbf{r} \square \mathbf{v} \mathbf{X}$ with uniformly distribution over the interval $\square^{\mathbf{x}}, \mathbf{x}_{\mathbf{2}}$. If the expected number of vehicles crossing the roundabout is $\mathbf{1 5}$ with variance $\mathbf{3}$, calculate the:
(i) values of $\mathbf{X}_{1}$ and $\mathbf{x}_{\mathbf{2}}$.
(ii) probability that at least $\mathbf{1 4}$ vehicles cross the roundabout.
(iii) probability that the number of vehicles crossing the roundabout lies within one standard deviation of the mean.

EER:

1. The $p \square d \square f$ of a continuous $r \square v \mathbf{X}$ is given by
$f(x) \square \square \square \square(1 \square \mathbf{x 2} \square \quad, \quad 0 \square \mathbf{x} \square \mathbf{1}$

Find:
(i) the value of $\square$.
(ii) the mean, $\boldsymbol{\mu}$ and standard deviation, $\square$ of $\mathbf{X}$.
(iii) $\mathbf{E}(\mathbf{8 X}+3)$ and $\operatorname{Var}(\mathbf{8 X}+3)$

$$
\left(\mathbf{i v}^{)} \mathbf{P}(|\mathbf{X} \square \boldsymbol{\mu}| \square \boldsymbol{\sigma})\right.
$$

$\square A n s:(i) 1 \square 5$ (ii) 0 $0 \square 375,0 \square 2437$ (iii) 6, $3 \square 8$ (iii) $0 \square 6145 \square$
2. The $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of a continuous $\mathrm{r} \square \mathrm{v} \mathbf{X}$ is given by

(a) Show that $f(x)$ represents a probability density function.
(b) Find the:
(i) median of $\mathbf{X}$
(ii) $\mathbf{8 0}{ }^{\text {th }}$ percentile of $\mathbf{X}$.
(iii) value of $\mathbf{b}$ such that $\mathbf{P}(\mathbf{X} \square \mathbf{b}) \square 0 \square 6$.
(iv) expressions for $\mathbf{P}(\mathbf{X} \square \mathbf{x})$ and sketch it.

## $\square A n s: ~ b(i) 1 \square 2679 ~(i i) ~ 1 \square 9046 ~(i i i) ~ 1 \square 4508 \square ~$

3. The $p \square d \square f$ of a continuous $r \square v \mathbf{X}$ is given by

$$
\square^{\square} \square \mathbf{x} \square \square \mathbf{x} 2 \quad, \quad 0 \quad \square \mathbf{x} \square 2
$$

$f(x) \square \square$
ㅁ 0 , otherwise
Given that the mean of $\mathbf{X}$ is $\mathbf{1}$, find the:
(i) values of $\square$ and $\square$.
(ii) variance of $\mathbf{X}$
(iii) mode of $\mathbf{X}$
$\square A n s: ~(i) 1 \square 5,0 \square 75$ (ii) $0 \square 2$ (iii) $1 \square$
4. The $\mathrm{p} \square \mathrm{d} \square \mathrm{f} f(x)$ of a $\mathbf{r} \square \mathbf{v} \mathbf{X}$ takes on the form shown in the sketch below: $f(x)$

Find:
(i) the value of $\square$
(ii) the equations of the $\mathrm{p} \square \mathrm{d} \square \mathrm{f} \quad$ (iii) the mean of
X.

$$
\begin{aligned}
& \text { (iv) } P(\mid X \square 1 \square 25 \square 0 \square 75) \\
& \text { (v) } P(0 \square 2 \square X \quad 1 \square 5 X \quad \square 0 \square 6) \\
& \quad \square A n s: \text { (i) } \frac{1}{2} \text { (iii) } 1 \square 0833 \text { (iv) } 0 \square 625 \text { (v) } 0 \square 5982 \square
\end{aligned}
$$

5. A r $\square \mathrm{v} X$ is uniformly distributed with mean $7 \square 5$ and variance $\mathbf{0} \square 75$ over the interval $\square \mathbf{a}, \mathbf{b} \square$. Find:
(i) the values of $\mathbf{a}$ and $\mathbf{b}$.
(ii) the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of the distribution.
(iii) $\mathbf{P ( 7 \square 2 \square X ~} \square 8 \square 4)$
(iv) $80^{\text {th }}$ percentile of $\mathbf{X}$.
(v) probability that $\mathbf{X}$ lies within one standard deviation of the mean.
(vi) cumulative distribution function of $\mathbf{X}$.
$\square A n s: ~(i) 6,9 \quad$ (iii) $0 \square 4$ (iv) $8 \square 4 \quad$ (v) $0 \square 5774$
6. The time taken to perform a particular task $t$ hours is given by the $p \square d \square f$ :

$$
\begin{aligned}
& \square_{\square} 10 \beta t^{2} \quad, \quad 0 \square t \square 0 \square 6 \\
& f(t) \quad \square \square_{\square} 9 \beta(1 \square t) \quad, \quad 0 \square 6 \square t \square 1 \\
& \text { प०० } 0 \text {, otherwise }
\end{aligned}
$$

(a) Find the:
(i) value of $\square$
(ii) most likely time.
(iii) expected time.
(b) Determine the probability that the time will be:
(i) more than $\mathbf{4 8}$ minutes.
(ii) between 24and 48 minutes.
DAns: (a) (i)
(ii) $\frac{\mathbf{2 5}}{\mathbf{3 6}} \quad \mathbf{0} \square 6$
(iii) $0 \square 591$
(b) (i) $0 \square 125$ (ii) $0 \square 727 \square$
7. A continuous $\mathrm{r} \square \mathrm{v} \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$

$$
\begin{aligned}
& \square_{\square} \quad 0 \quad \text {, otherwise }
\end{aligned}
$$

Given that $\mathbf{P}(\mathbf{X}>\mathbf{1})=\mathbf{0} \square 8$, find the:
(i) values of $\boldsymbol{k}$ and $\square$.
(ii) probability that $\mathbf{X}$ lies between $0 \square 5$ and $2 \square 5$
(iii) mean of $\mathbf{X}$

$$
\square A n s: ~(i) ~ \square 1, \mathcal{P}_{15}^{\prime} \text { (ii) } 0 \square 6667 \text { (iii) } 1 \square 8 \square
$$

8. A continuous $\mathbf{r} \square \mathbf{v} \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ :

$$
\begin{gathered}
\square_{\square} \boldsymbol{\beta} \mathbf{x}^{2}, \quad 0 \square \mathbf{x} \square \mathbf{2} \\
f(x) \square \square_{\square} \boldsymbol{\beta}(6 \square x), \quad 2 \square x \square \mathbf{x}
\end{gathered}
$$

$\square_{\text {OL }} 0$, otherwise
(a) Sketch $f(x)$
(b) Find:
(i) the value of $\square$.
(ii) the median of $\mathbf{X}$.
(iii) $\mathbf{P}\left(\begin{array}{lll}\mathrm{X} & 275 & 125\end{array}\right) \square$
$\square A n s: ~ b(i) \frac{3}{32}$ (ii) $2 \square 734$ (iii) $0 \square 7070 \square$
9. $A$ continuous $r \square v \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$

(a) Sketch $f(x)$
(b) Find:
(i) the value of $\mathbf{k}$.
(ii) the mean and variance of $\mathbf{X}$.
(iii) $\mathbf{P}(\mathbf{X}-2 \square 5)$
(iv) $\mathbf{P ( 1 \square X \square 2 \square 5 )}$
(v) $\quad \mathbf{P}(0 \quad X \quad \square \mathbf{2} / \mathbf{X} \square 1)$
$\square A n s: ~(i) ~(i i), \frac{1}{4} \quad \frac{43}{24} \quad 0 \square 8316$ (iii) $0 \square 3125$ (iv) $0 \square 4375 \frac{1}{3}$
(v)
10. The cumulative distribution of a continuous $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is such that:

Find:
(i) the values of $\square$ and $\square$.
(ii) $\mathbf{P}(\mathbf{2} \square 8 \square \mathrm{X} \square 5 \square 2)$
(iii) the median of $\mathbf{X}$
(iv) the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$ and sketch it.
(v) the mean, $\mu$ of $\mathbf{X}$.

$$
\begin{aligned}
& \text { (vi) } P(|X \square \mu| \square 0 \square 8) \\
& \quad \square \text { Ans: } \quad \frac{1}{12} \\
& 0 \square \\
& 0 \square 5578 \square
\end{aligned}
$$

11. The number of boats $\mathbf{X}$ crossing a river is uniformly distributed between 150 and 210.
(a) State the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of the distribution.
(b) Find the:
(i) probability that between $\mathbf{1 7 0}$ and $\mathbf{1 9 4}$ boats cross the river.
(ii) expected number of boats to cross the river.
(iii) standard deviation for the distribution.
$\square A n s: ~ b(i) 0 \square 4$ (ii) 180 (iii) $7 \square 7460 \square$
12. The cumulative distribution of a continuous $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is such that:

Find:
(i) the values of $\square$ and $\square$. Hence sketch $\mathbf{F}(\mathbf{x})$
(ii) $\mathbf{P}\left(1 \square 5 \square X \square 2 \square 5 / X \quad \mathbf{2}^{2}\right)$
(iii) the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$ and sketch it. Hence deduce the mean, mode and median
$\square A n s:(i) 3$, $\square 0 \square 5$ (ii) $0 \square 75$ (iii) 2, 2, $2 \square$
13. A continuous $r \square v \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$.
$\square k(3 \square x) \quad, \quad 1 \square x \square 2$

(a) Sketch $f(x)$, hence deduce the mean and median of $\mathbf{X}$.
(b) Find:
(i) the value of $\boldsymbol{k}$.
(ii) $\mathbf{P}(\mathbf{X} \square 3 \square 5 / 3 \square X \square 4)$
(iii) the $\mathbf{8 0}{ }^{\text {th }}$ percentile of $\mathbf{X}$.
$\square A n s: ~(a) 2 \square 5,2 \square 5 \quad$ b(i) $0 \square 25$ (ii) $0 \square 583$ (iii) $3 \square 5492 \square$
14. The time, T, taken to complete a certain task can be modeled as in the diagram below, where $\mathbf{t}$ is the time in minutes.

Determine the:

(i) value of $\square$
(ii) equations of the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$
(iii) $\mathbf{E}(\mathbf{T})$
(iv) probability that the task will be completed between $\mathbf{4}$ and $\mathbf{7}$ minutes.
(v) probability that the task will be completed in less than $\mathbf{2}$ minutes
पAns: (i) 0■2
(iii) 5 (iv) $0 \square 5$
(v) $0 \square 08 \mathrm{\square}$
15. A $\square \mathrm{Dv} \mathbf{X}$ is uniformly distributed with variance $\mathbf{6} 7 \mathbf{7 5}$ over the interval

3 x b. $\square$ Find:
(i) the value of $\mathbf{b}$.
(ii) the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of the distribution.
(iii) $\mathbf{P}(5 \quad \square$

X $\quad$ 9/ $\mathbf{X ~ \square 7 ) ~}$
$\square$ Ans: (i) 12 (iii) $0 \square 4 \square$
16. A $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is uniformly distributed over the interval $\square \mathbf{a}, \mathbf{b} \square$.
(a) State the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$ and sketch it.
(b) Show that:
(i) the mean of $\mathbf{X}$ is $\underline{\mathbf{a}} \underline{\mathbf{b}}$.

2
(ii) the variance of $\mathbf{X}$ is $\underline{(\mathbf{b} \quad \mathbf{a}) 2}$.

12
(iii) the median of $\mathbf{X}$ is $\underline{\mathbf{a}} \underline{\mathbf{b}}$.

2
(c) Find the cumulative distribution function of $\mathbf{X}$ and sketch it.
17. $\mathrm{Ar} \square \mathrm{v} \mathbf{X}$ has the following cumulative distribution function

(a) Sketch $\mathbf{F}(\mathbf{x})$
(b) Find the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$. Hence show that the variance of $\mathbf{X}$ is $\underline{\left(\mathbf{b} \square \mathbf{a}^{\mathbf{2}}\right.}{ }^{\text {. }}$
18. A $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is uniformly distributed with lower quartile 5 and upper quartile 9 in the interval $\square \mathbf{a}, \mathbf{b} \square$. Find the:
(i) values of $\mathbf{a}$ and $\mathbf{b}$.
(ii) $\mathbf{P}(6 \square \mathbf{X} \square 7)$
(iii) probability that $\mathbf{X}$ lies within one standard deviation of the mean.
(iv) cumulative distribution function of $\mathbf{X}$.
$\square A n s:(i) 3,11$ (ii) $0 \square 125$ (iii) $0 \square 5774 \square$
19. The $\mathrm{p} \square d \square f$ of a $\mathrm{r} \square \mathrm{v} \mathbf{X}$ is given by:

(i) Identify the distribution
(ii) Find $\mathbf{P}(\mathbf{X}|\square \square \boldsymbol{\mu}|) \boldsymbol{\sigma}$ where $\square$ and $\square$ is the mean and standard deviation of $\mathbf{X}$ respectively.

## पAns: (ii) $0 \square 5774$

20. The life time in years of a battery is known to be uniformly distributed with mean 4 and variance $4 / 3$, issued with a three years guarantee. If two such batteries are picked at random, find the probability that both will be replaced under the guarantee.

पAns: (ii) $0 \square 0625 \square$
21. $\mathrm{Ar} \square \mathrm{v} \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$.
$\square 3 \mathrm{xa}, 0 \square \mathrm{x} \square 1 f(x)$
$\square \square_{\square}$

$$
\square_{\square} \mathbf{0} \quad, \quad \text { otherwise }
$$

Find the:
(i) value of $\mathbf{a}$.
(ii) median of $\mathbf{X}$.

पAns: (i) 2 (ii) $0 \square 7937$
$22 \mathrm{Ar} \square \mathrm{v}$ has the following cumulative distribution function

$$
\begin{aligned}
& 0 \quad, \quad x \square 0 \\
& F(x) \square \square_{\square}^{1}\left(x^{4} \square 8 x^{3} \square \boldsymbol{\beta} x^{2}\right), 0 \square x \square 4 \\
& { }^{\circ} 12 \\
& \text { प } 1 \quad, \quad x \quad 4
\end{aligned}
$$

Find:
(i) the value of $\boldsymbol{\beta}$.
(ii) $\mathbf{P}(\mathbf{X}<2)$
(iii) the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$ (iv) the
mode of the distribution
$\square A n s: ~(i) 18$ (ii) $0 \square 75$ (iv) $1 \square$
23. The cumulative distribution of a continuous $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is such that:

Find:
(i) the values of $\square$ and $\square$.
(ii) $\mathbf{P}(\mathbf{3} \square 2 \mathrm{X} \square 5)$
(iii) the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$ and sketch it.
(iv) the mean, $\mu$ of $\mathbf{X}$.

$$
\square A n s: \text { (i) 0ם5, } \square 0 \square 25 \text { (ii) } 0 \square 4375 \text { (iv) 1 } \square 5 \square
$$

24. A continuous $r \square v \mathbf{X}$ is distributed as follows:
(i) Find the values of $\square$ and $\square$.
(ii) Show that $\mathbf{E}(\mathbf{X})=\mathbf{2} \mathbf{2 5}$, and find the standard deviation $\square$ of $\mathbf{X}$.
$\square A n s: ~(i) 1, \frac{-1}{27}$ (ii) $0 \square 581 \square$
25. The $p \square d \square f$ of $r \square v \mathbf{X}$ is given by
$\square^{\square} \square \mathbf{x}(16 \square \mathbf{x} 2) \quad, \quad 0 \quad \square \mathrm{x} \square 4$
$f(x) \square \square$

$$
\begin{array}{llll}
\square \\
\square & 0 & \text { otherwise }
\end{array}
$$

Find the:
(i) value of $\boldsymbol{\beta}$
(ii) mode of $\mathbf{X}$
(iii) mean of $\mathbf{X}$

$$
\square A n s: \text { (i) } \frac{1}{64} \text { (ii) } 2 \square 3094 \text { (iii) } \frac{32}{15} \square
$$

26. A $\mathbf{r} \square \mathrm{v} X$ is uniformly distributed over the interval $\square 2,6 \square$. Find

(ii) the variance of $\mathbf{X}$

पAns: (i) $0 \square 4$ (ii) $\frac{4}{3}$

27 A continuous $r \square v \mathbf{X}$ has the following p $\square \mathrm{d} \square \mathrm{f} . \square 2 \square \mathbf{4 x}$
, $0 \square \times \square \mathbf{x} 25$
$f(x) \square$ वा $1 \quad, \quad 0 \square 25 \square x \square 0 \square 5$
 , otherwise
(a) Sketch $f(x)$, hence deduce the mean, $\boldsymbol{\mu}$ and median of $\mathbf{X}$.
(b) Find:
(i) the cumulative distribution function of $\mathbf{X}$.
(ii) $\mathbf{P}\left(|X \square \mu| \square 0 \square^{\mathbf{2}}\right)$
$\square A n s:(a) 0 \square 375,0 \square 375 \quad$ b(ii) $0 \square 4225 \square$
28. The cumulative distribution of a continuous $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is such that:

$$
\begin{aligned}
& \square \quad 0 \quad, \quad \mathbf{x} \quad 1 \\
& \square_{\square} \underline{1}_{(x \square 1)^{2}} \quad, \quad 1 \square \mathbf{x} \square 3 \\
& F(x) \square \square_{\square}^{12} \underline{1}_{\left(14 x \square x^{2} \square 25\right)} \quad 3 \square \\
& \text { x } \quad 7 \\
& \square 24
\end{aligned}
$$

ロ 1 , $\mathbf{x} \square 7 \quad$ Find:
(i) $\mathbf{P}(\mathbf{2} \square \mathbf{8} \square \mathbf{X} \square \mathbf{5} \square \mathbf{2})$
(ii) the median of $\mathbf{X}$
(iii) the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$ and sketch it.
(iv) the standard deviation of $\mathbf{X}$.
पAns: (i) $0 \square 595$
(ii) $3 \square 45$
(iv) $1 \square 2472$
29. The number of boats $\mathbf{X}$ crossing a river is uniformly distributed between

30 and 110 boats. Find the:
(i) probability that at least $\mathbf{9 0}$ boats cross the river.
(ii) expected number of boats to cross the river.
(iii) standard deviation for the number of boats to cross the river.
(iv) probability that $\mathbf{X}$ lies within one standard deviation of the mean.
(v) upper quartile for the number of boats to cross the river.
(vi) $\mathbf{2 5}^{\text {th }}$ percentile for the number of boats to cross the river.
(vii) cumulative distribution function of $\mathbf{X}$ and sketch it.

पAns: (i) $0 \square 25$ (ii) 70 (iii) $23 \square 094$ (iv) $0 \square 5774$ (v) 90 (vi) $50 \square$
30. The $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathrm{r} \square \mathrm{v} \mathbf{X}$ is given by

$$
\square^{\square} \square \mathbf{x}(\mathbf{3 x} \square \mathbf{x} 2) \quad, \quad \mathbf{0} \square \mathbf{x} \square \mathbf{3}
$$

$f(x) \square \square$

Find the:
(i) value of $\boldsymbol{\beta}$
(ii) mode of $\mathbf{X}$
(iii) mean of $\mathbf{X}$

पAns: (i) $4 / 27$ (ii) 2 (iii) $1 \square 8 \square$

31 The $\mathrm{p} \square \mathrm{d} \square f(\boldsymbol{x})$ of a $\mathbf{r} \square \mathbf{v} \mathbf{X}$ takes on the form shown in the sketch below:

Find the:
(i) value of $\square$
(ii) equations of the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$
(iii) median of X.

पAns: (i) 0■2 (iii) 4ロ2614 $\square$
32. The weekly demand for petrol $\mathbf{X}$ in thousands of units at the petrol station is given by the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$

$$
\begin{array}{cc}
f(x) \square \square \square \square \mathbf{x}(\lambda \square \mathbf{x}) & , \quad \mathbf{0} \square \mathbf{x} \square \mathbf{1} \\
\square \square \quad \mathbf{0} & , \quad \text { otherwise }
\end{array}
$$

(i) Given that the mean weekly demand is $\mathbf{6 2 5}$ units, find the values of $\boldsymbol{\beta}$ and $\boldsymbol{\lambda}$. Hence obtain the mode of $\mathbf{X}$.
(ii) If every week the petrol station stocks $\mathbf{7 5 0}$ units of petrol, find the probability that in a given week the petrol station will be unable to meet the demand for petrol.
(iii) Find the amount of petrol that should be stocked in order to be $\mathbf{8 5} \square \mathbf{0 5 \%}$ certain that the demand for petrol in that week will be met.

पAns: (i) 1ロ5, 2 (ii) $0 \square 3672$ (iii) 900units
$33 \mathrm{Ar} \square \mathrm{v} \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$.
 $\square \mathbf{x}) \quad$, $0 \square \mathbf{x} \square \mathbf{2 a} \quad 0 \quad$, otherwise

Find:
(i) the value of $\mathbf{a}$.
(ii) the expressions for $\mathbf{P}(\mathbf{X} \square \mathbf{x})$ and sketch it
(iii) the median of $\mathbf{X}$.

$$
\text { (iv) } P(X \quad \square 1 \square 5 / X \subset 0)
$$

पAns: (i) 1 (iii) $0 \square 2679$ (iv) $0 \square 9375 \square$
34. $\mathrm{Ar} \square \mathrm{v} \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$.

$$
\begin{aligned}
& \square_{\square} 3^{1}(\mathbf{x} \square 2) \text {, } \square \mathbf{a} \square \mathbf{x} \square 1 \\
& f(x) \quad \square_{\square} \mathbf{a}^{\mathbf{1}}(\mathbf{2} \square \mathbf{x}) \quad, \quad 1 \square \mathbf{x} \square \mathbf{a} \\
& \text { - } 0 \text {, otherwise }
\end{aligned}
$$

Find:
(i) the value of $\mathbf{a}$.
(ii) $\mathbf{P}(\mathbf{X} \square \mathbf{0})$
(iii) the lower quartile of $\mathbf{X}$.

$$
\square A n s: \text { (i) } 2 \text { (iii) } 13 \text { (iii) } \square 0 \square 2679 \square
$$

35 A continuous $\mathrm{r} \square \mathrm{v} \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$

$$
\begin{aligned}
& f(x) \square \text { व०口 } \lambda \sin x, \quad 0 \square x \square \pi \\
& \text { पெ 0 , otherwise }
\end{aligned}
$$

Find:
(i) the value of $\lambda$.

(iii) the median of $\mathbf{X}$.
पAns: (i) $0 \square 5$
(ii) $0 \square 75$
(iii) $\frac{\pi}{2}$
36. A continuous $r \square v \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$

(a) Find:
(i) the value of $\lambda$.
(ii) $\mathbf{P}_{\square \square}^{\square_{\square}} \underline{\pi}_{3} \square \mathbf{X} \quad \underline{\mathbf{3}}_{4} \underline{\boldsymbol{\pi}}_{\square \square}$
(b) Show that the mean, $\boldsymbol{\mu}$ of the distribution is $1 \square \frac{\pi}{4}$.

$$
\begin{array}{ll}
\square A n s: ~(i) ~ & \frac{2}{\pi}
\end{array} \quad \text { (ii) } 0 \square 6982
$$

$37 \mathrm{Ar} \square \mathrm{v} \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$. ${ }^{\square} \lambda \boldsymbol{c o s} \mathbf{x}$ $\begin{array}{rrr}0 & \square \\ & \frac{\pi}{4}\end{array}$ $\begin{array}{llllll}\square \\ \square \operatorname{sinx} & , & \frac{\pi}{4} & \square & \mathbf{x} & \frac{\pi}{2} \\ \square & \square & 0 & & & \\ \text { otherwise } & & & & \end{array}$ $f(x) \square \square$

प
Find:
(i) the value of $\lambda$, hence sketch $f(x)$.

(iii) the mean of $\mathbf{X}$.
■Ans: (i)
$\sqrt{2}$
(ii) $0 \square 2265$
(iii) $\frac{\pi}{4}$
2
38. The cumulative distribution of a continuous $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is such that:

$$
\begin{aligned}
& \square \mathbf{0} \quad \text {, } \mathbf{x} \square \\
& \square^{\square} \beta \sin ^{\square 1} \mathbf{x} \quad, \quad 0 \square \mathbf{x} \square 1 \\
& \mathbf{F}(\mathbf{x}) \quad \square \\
& \square \lambda \tan ^{\square 1} \mathbf{x}, 1 \square \mathbf{x} \sqrt{3} \\
& \text { ■ } \mathbf{1} \quad, \quad \mathbf{x} 3
\end{aligned}
$$

(a) Find:
(i) the values of $\square$ and $\square$.
(ii) $\mathbf{P}(0 \square 5 \square X \quad \square 1 \square 5)$
(iii) the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$.
(b) Show that the mean, $\mu$ of the distribution is $\frac{\mathbf{3}}{\mathbf{2 \pi}} \square \mathbf{1} \square$ In2 $\square$

$$
\square A n s: \text { (i) } \frac{3}{\pi}, \frac{3}{2 \pi} \quad \text { (ii) } 0 \square 6885 \square
$$

39. $\mathrm{Ar} \square \mathrm{v} \mathbf{X}$ has the following cumulative distribution function.

Find:
(i) the values of $\square$ and $\square$.
(ii) the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$
(iii) the mean, $\boldsymbol{\mu}$ of $\mathbf{X}$.

$$
\begin{aligned}
& \left(\text { iv }^{)} P(|X \square \mu| \square 0 \square 5)\right. \\
& \quad \square \text { Ans: (i) } 1 / 12,1 / 4 \text { (ii) } 2 \square 0556 \text { (iii) } 0 \square 5412 \square
\end{aligned}
$$

40. The $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of a $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is given by:

Show that the:
(i) value of $\lambda \square \frac{4}{\pi}$.

(iii) $E \square X \square \square^{\frac{2 \operatorname{In} 2}{\pi}}$.
(iv) median of the distribution istan $\frac{\pi}{8}$
41. The cumulative distribution of a continuous $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is given by:

(a) Find:
(i) the value of $\boldsymbol{\beta}$.
(ii) $\mathbf{P}(\mathbf{X}>1)$
(b) Show
that the:

```
\(\underline{\pi}\)
```

(i) median of $\mathbf{X}$ is $\boldsymbol{\operatorname { t a n }} \mathbf{6}$.
(ii) $\mathbf{7 5}^{\text {th }}$ percentile of X is $\boldsymbol{\operatorname { t a n }} \frac{\pi}{4}$.
(c) By stating the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$, show that $\mathbf{E}(\mathbf{X}) \square \frac{3 \operatorname{In} \mathbf{2}}{\pi}$.
42. The times of arrival of a bus at its stage are uniformly distributed between the interval 9:00am to 2:00pm. Find the:
(i) mean and variance of the bus's time of arrival
(ii) probability that the time of arrival does not exceed $\mathbf{1 : 0 0} \mathbf{p m}$.

$$
\square A n s: \text { (i) 11ロ5h, } \quad 25 / 12 \text { (iii) } 0 \square 8 \square
$$

43. $\mathrm{A} \mathbf{r} \square \mathbf{v} \mathbf{X}$ is uniformly distributed over the interval $\square \mathbf{a}, \mathbf{b} \square$.
(a) State the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$ and sketch it.
(b) Show that the lower quartile of $\mathbf{X}$ is $\underline{\mathbf{3 a}^{\mathbf{b}} \quad \text { b }}$ and the upper is $\underline{\square}$ $\mathbf{3}^{\text {b }}$.

## 4

4
44. A $\mathrm{r} \square \mathrm{v} X$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$

(a) Sketch $f(x)$
(b) Find:
(i) the values of $\boldsymbol{\beta}$ and $\boldsymbol{\lambda}$
(ii) the mean of $\mathbf{X}$
(iii) $\mathbf{P}(\mathbf{3} \square X \square 4 X \square 2) \square A n s: ~ b(i){ }^{2} \mathbf{1 1}^{\prime}, \mathbf{6}_{11}$ (ii) $2 \square 4848$ (iii) $0 \square 375 \square$ $1 /$
45. A continuous $r \square v \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$.

| - 2口 $\boldsymbol{\beta}_{\mathrm{x}}$ otherwise | $5 \square \mathrm{x}$ [ $\square$ | 0 |
| :---: | :---: | :---: |

## $\square 3 \quad 3$

(a) Find the values of $\boldsymbol{\lambda}$ and $\boldsymbol{\beta}$
(b) Sketch $f(x)$, hence deduce the mean, $\boldsymbol{\mu}$ of $\mathbf{X}$.
(c) Find the:
(i) variance of $\mathbf{X}$.
(ii) $\mathbf{E}(\mathbf{3 X})$ and $\operatorname{Var}(\mathbf{3 X})$

$$
\square A n s:(a){ }^{1} 3, \square^{1 / 3} \text { (b) } 4 \quad \text { c(i) } 101 / 6 \text { (ii) } 12,151 \square 5 \square
$$

46. The mass $\mathbf{X}$ kg of maize flour produced per hour is modeled by a continuous $r \square v$ whose $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ is given by:

$$
\begin{aligned}
& f(x) \quad \square_{\square \square} \lambda\left(4 \square x^{2}\right), \quad 0 \square x \square \\
& 2 \text { 미 , } \\
& \text { otherwise }
\end{aligned}
$$

(a) Find the:
(i) value of $\lambda$
(ii) mean mass produced per hour
(b) Given that maize flour is sold at $£ \mathbf{8}$ per kg and the cost of running the production is $\mathbf{£} \mathbf{1}$ per hour, find the:
(i) expected profit per hour.
(ii) probability that in an hour the profit will exceed $£ \mathbf{1 1}$.
पAns: $\mathbf{a ( i )}{ }^{3 / 16}$
(ii) $3 / 4$ b(i) $£ 5$
(ii) $0 \square 0859 \square$
47. Ar $\square \mathbf{x}$ is uniformly distributed over the interval $\mathbf{a} \square \mathbf{X} \square \mathbf{b}$. Given that $\mathbf{X}$ is distributed with mean $\mathbf{9}$ and variance 12, find:
(i) the values of $\mathbf{a}$ and $\mathbf{b}$.
(ii) $\mathbf{P}(\mathbf{X} \square$ 10 $)$

पAns: (i) 3, 15 (ii) $7 / 12$
48. A $\mathbf{r} \square \mathbf{v} \mathbf{X}$ is uniformly distributed over the interval $\square \mathbf{a}, \mathbf{b} \square$.
(a) State the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$ and sketch it.
(b) Show that $\mathbf{P}\left({ }^{\mathbf{x}}{ }_{1} \square \mathbf{X} \square^{\mathbf{x}_{2}}\right) \square \mathbf{x b}^{\underline{2}} \square^{\square} \mathbf{x}_{\mathbf{a}^{1}}$
49. A continuous $r \square v \mathbf{X}$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$

Find:
(i) the value of $\lambda$.
(ii) the mean of $\mathbf{X}$.
(iii) the cumulative distribution function of $\mathbf{X}$.

## (iv) $\mathbf{P}(1 \square X \square 3)$

पAns: (i) $\frac{\mathbf{3}}{\mathbf{1 6}}$
(ii) $1 \square 75$ (iv) $0 \square 6875$
50. The lifetime $X$ in years of an electric bulb is a $\square \mathrm{V} \mathbf{X}$ with the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$

$$
\begin{aligned}
& f(x) \square \square_{\square \square} \lambda(5 \square \mathbf{x}), \quad 0 \square \mathbf{x} \square 5 \\
& \text { ㅁ 0 , otherwise }
\end{aligned}
$$

(a) Find the:
(i) value of $\lambda$.
(ii) mean of $\mathbf{X}$.
(b) If two such new bulbs are sold, find the probability that:
(i) both bulbs fail to work within one year.
(ii) only one bulb works for more than three years.

$$
\text { पAns: (a) (i) } \frac{6}{125} \quad \text { (ii) } 2 \square 5 \quad \text { (b) (i) } 0 \square 0108 \text { (ii) } 0 \square 4562
$$

51. A uniformly distributed $\mathbf{r} \square \mathbf{v} X$ has the following $\mathrm{p} \square \mathrm{d} \square \mathrm{f} f(x)$ :

$$
y
$$

Find the:

(i) value of $\boldsymbol{k}$
(ii) equations of the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\boldsymbol{X}$
(iii) variance of $\boldsymbol{X}$
पAns: (i) 5 (iii) $\frac{\mathbf{4}}{\mathbf{3}} \square$
52. The cumulative distribution function of a continuous $r \square v \boldsymbol{X}$ is illustrated as follows:

$$
2
$$

(i) the $\mathrm{p} \square \mathrm{d} \square \mathrm{f}$ of $\mathbf{X}$ and sketch it.
(ii) the mean and variance of $\mathbf{X}$.
(iii) $\mathbf{P}(\mathbf{X} \square \mathbf{3} / \mathbf{X} \square 5)$

$$
\text { ZAns: (ii) } 4, \frac{4}{3} \quad \text { (iii) } \frac{2}{3}
$$
