CHEMISTRY

Paper 1

Uganda Advanced Certificate of Education

RESOURCE EXAMINATIONS 2016

CHEMISTRY

Paper 1

2 hours 45 minutes

INSTRUCTIONS TO CANDIDATES:

Answer all questions in Section A and any six (6) questions in Section B.

All questions must be answered by writing clearly your answers and workings in the spaces provided.

Silent non-programmable scientific electronic calculators may be used.

No paper should be given for rough work and any extra paper attached to this booklet will not be considered.

The periodic table, with relative atomic masses and atomic numbers of different elements is attached at the end of this booklet.

Mathematical tables (3 - figured) are to be provided.

Illustrate your answers with equations where applicable. Molar gas constant,

 $R = 8.31 \text{ JKg}^{-1} \text{mol}^{-1}$. Molar volume of gas at s.t.p is 22.4 litres.

	For Examiner's use only

SECTION A (46 MARKS)

Answer all questions from this section

1.	Oxygen diffused through a porous partition in 1.87 minutes. Under similar conditions the same volume of an alkene T diffused in 2.15 minutes.
3	(a) Determine the formula of T ($2\frac{1}{2}$ marks)
	•

(6)	(b) Write equation and outline the mechanism for the reaction between T and benzene. Indicate the condition(s) for the reaction (3 marks)

TE.	

2.	(a) Define the term heat of reactio	n. (1 mark)	8
	***************************************	***************************************	
- the	(b) Calculate the standard enthalp	y of hydrogenation of ethane	
120	(i) $C_2H_6(g) + \frac{7}{2}O_2(g)$	→ 2CO ₂ (g) + 3H ₂ O (l)	$\Delta H = -1550 \text{KJmol}^{-1}$
	(ii) C ₂ H ₄ (g) + 3O ₂ (g)	→ 2CO ₂ (g) + 2H ₂ O(l)	$\Delta H = -1390 \text{KJmol}^{-1}$
		→ H ₂ O(l)	$\Delta H = -285.8 \text{KJmol}^{-1}$
78	- (A) -7-		······································

3.	Aluminium and phosphorus both for element is +3.	orm compounds in which the	oxidation state of the

171	rue e		
		3 }	

	(b) Write equation for the reaction of each of these elements with sodium hydroxide.
eur.	(3 marks)
4.	Name one reagent that can be used to distinguish between each of the following pairs of compounds and state what would be observed in each case if the reagent is reacted with the compounds: (a) CH ₃ CH ₂ NH ₂ and (CH ₃ CH ₂) ₂ NH (3 marks)
the	Reagent:
	Observation:
	сосн ₂ сн ₃ сосн ₃
	(b) and (3 marks)
4	Reagent:

	Q
	Observation:
ाम	
5.	(a) Explain the order of increasing basicity for the following compounds (2 marks)
	$C_6H_5NH_2 < NH_3 < CH_3NH_2$

-	
	(b) When one mole of methylamine is dissolved in water, the hydrogen ion concentration is found to be 2.5 x 10^{-10} moldm ⁻³
	(i) Write an equation for the reaction between water and methylamine. (1 mark)
	(ii) Calculate the base dissociation constant, K_b for methylamine ($2\frac{1}{2}$ marks)
501	
	5

ļ

	285.71
6.	The convention of a cell is given below. Pt/Fe ²⁺ (aq), Fe ³⁺ (aq) // MnO ₄ (aq), Mn ²⁺ (aq), H ⁺ (aq)/Pt. (a) Write equation for the half-cell reaction at the:
	(i) Anode (I mark)
	(ii) Cathode (1 mark)
	•
	(b) Write the overall equation for the cell reaction. $(1\frac{1}{2} \text{ marks})$
	(c) The electrode potentials for the system Fe ²⁺ (aq)/Fe ³⁺ (aq) and Mn ²⁺ (aq)/MnO ₄ (aq) are - 0.76 and -1.51 volts respectively. Deduce whether the reaction in (b) is feasible or not
-	and give a reason for your answer. (2 marks)
7.	(a) Define the term boiling point elevation constant of a substance. (1 mark)
	(b) The boiling point of benzene under certain pressure conditions is 80.0°C. Calculate the boiling point elevation constant of benzene, if a solution containing 5g of 2,4,6 – tri- nitrophenol, HOC ₆ H ₂ (NO ₂) ₃ in 100g of benzene, under these pressure conditions boils at 80.568°C. (4 marks)
